XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 232; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT New short interfering nucleic acid, useful e.g. for treatment and
PT diagnosis of obesity or diabetes, downregulates expression of the
PT stearoyl-CoA desaturase gene.
XX
PS Example 3; SEQ ID NO 585; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT New double-stranded short interfering nucleic acid molecule, useful for
PT down-regulating the expression of an endogenous mammalian target gene or
PT for treating diseases that respond to modulation of gene expression or
PT activity.
XX
PS Example 24; SEQ ID NO 844; 593pp; English.
XX
CC The invention relates to a double-stranded short interfering nucleic acid
CC (siNA) molecule that down-regulates expression of an endogenous mammalian
CC target gene comprising one or more chemical modifications and each strand
CC of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC the invention demonstrates antiarteriosclerotic, neuroprotective,
CC nootropic, antiparkinsonian and anticonvulsant activities and may be
CC useful for down-regulating the expression of an endogenous mammalian
CC target gene and therefore in the treatment of any disease or condition
CC that responds to modulation of gene expression or activity in a cell,
CC tissue or organism. The disease or condition may include pulmonary
CC diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC Parkinson's disease, epilepsy, dementia, huntington's disease or
CC amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC gene therapy applications. The current sequence is that of the siNA DNA-
CC RNA hybrid of the invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   New double-stranded short interfering nucleic acid molecule, useful for
PT   down-regulating the expression of an endogenous mammalian target gene or
PT   for treating diseases that respond to modulation of gene expression or
PT   activity.
XX
PS   Example 24; SEQ ID NO 838; 593pp; English.
XX
CC   The invention relates to a double-stranded short interfering nucleic acid
CC   (siNA) molecule that down-regulates expression of an endogenous mammalian
CC   target gene comprising one or more chemical modifications and each strand
CC   of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC   the invention demonstrates antiarteriosclerotic, neuroprotective,
CC   nootropic, antiparkinsonian and anticonvulsant activities and may be
CC   useful for down-regulating the expression of an endogenous mammalian
CC   target gene and therefore in the treatment of any disease or condition
CC   that responds to modulation of gene expression or activity in a cell,
CC   tissue or organism. The disease or condition may include pulmonary
CC   diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC   Parkinson's disease, epilepsy, dementia, huntington's disease or
CC   amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC   gene therapy applications. The current sequence is that of the siNA DNA-
CC   RNA hybrid of the invention.

PT ubiquinone.
XX
PS Disclosure; SEQ ID NO 4729; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.
CC Note: The sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format directly from WIPO

XX
PS Claim 15; SEQ ID NO 4729; 763pp; English.
XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary

```
CC   transplantation rejection, pulmonary infections, bronchitis or cancer.
CC   The reduced adenosine content of the anti-sense oligos corresponding to
CC   thymidines present in the target RNA serves to prevent the breakdown of
CC   the oligonucleotides into products that free adenosine into the system
CC   e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC   prevent any unwanted effects due to it

PS   Claim 3; SEQ ID NO 1999; 555pp; English.
XX
CC   The invention describes a new antisense compound, having a sequence
CC   comprising 8-30 bp targeted to a nucleic acid encoding endothelial
CC   specific molecule-1 (ESM-1), that specifically hybridises with the
CC   nucleic acid ESM-1 and inhibits its expression. Also described are: a
CC   composition; inhibiting the expression of ESM-1 in cells or tissues; and
CC   treating an animal having a disease or condition associated with ESM-1.
CC   The compound is useful for preparing a composition for treating diabetes,
CC   cancer, ischaemia or reperfusion injury, or angiogenic, immunological,
CC   cardiovascular or neurological disorder. This sequence represents an
CC   antisense oligonucleotide that can be used to modulate expression of
CC   endothelial specific molecule-1 (ESM-1).

PT   Identifying a predisposition to melanoma comprises determining whether an
PT   individual carrying a cyclin dependent kinase inhibitor 2A (CDKN2A)
PT   mutant allele also carries a melanocortin-1 receptor (MC1R) variant
PT   allele.
XX
PS   Claim 14; SEQ ID NO 42; 30pp; English.
XX
CC   The present invention relates to a method of identifying a predisposition
CC   to melanoma. The method comprises determining whether a human individual
CC   carrying a cyclin dependent kinase inhibitor 2A (CDKN2A) mutant allele
CC   also carries a melanocortin-1 receptor (MC1R) variant allele, where the
CC   presence of a MC1R variant allele indicates a predisposition of the
CC   individual to melanoma greater than that expected as a consequence of the
CC   CDKN2A mutant allele alone. Also disclosed is a kit for identifying a
CC   predisposition to melanoma. The kit comprises MC1R gene-specific primers
CC   and/or CDKN2A gene-specific primers and MC1R variant allele-specific
CC   probes and/or CDKN2A mutant allele-specific probes. The kit further
CC   comprises MC1R sequencing primers and/or CDKN2A sequencing primers. The
CC   method is useful for identifying a predisposition to melanoma. The
CC   present sequence represents a gene-specific primer that can be used in
CC   the method of the present invention.

XX
PS   Example; Page 13; 34pp; English.
XX
CC   AAR62941 and AAR62942 are examples of synthetic immunoreactive peptides.
CC   They are used in a method for detecting an antigen in a subject. The
CC   method involves binding the antigen to a solid support and then reacting
CC   it with an immunoreactive ligand (L) bound to an oligo; removing any
CC   unreacted L, and then detecting the presence of the oligo. A similar
CC   method can be used to detect Abs, in which case the ligand is an oligo-
CC   labelled Ag. The use of an amplifiable oligo as the label allows Ag or Ab
CC   to be detected at very low levels. An exemplary olgi is AAQ75024 which
CC   can be covalently attached by the 5'- terminus to the N- or C-terminal of
CC   a synthetic peptide. For LCR using oligo AAZ75024, oligos 1-4 (see
CC   AAQ75027-Q75030) can be used. (Updated on 25-MAR-2003 to correct PN
CC   field.)

PT   Sorting single-stranded nucleic acid, useful for analyzing expression
PT   patterns and screening active agents, uses capture agent with variable
PT   and constant regions.
XX
PS   Example; Page 5; 8pp; German.
XX
CC   This invention describes a novel method for sorting single-stranded
CC   nucleic acids by isolation and hybridisation of nucleic acid pools, then
CC   reading out, where the nucleic acids are selectively bound using capture
CC   agents that are (a) immobilised on the surface of a solid matrix and (b)
CC   comprise variable and non-variable regions. The capture oligonucleotides
CC   have a 5'-invariable anchor region, the complement of which is present at
CC   least once in each nucleic acid and a 3'-variable, discriminatory region
CC   that comprises all possible combinations of up to 10 nucleotides to allow
CC   binding of particular sorts of single stranded nucleic acids. The capture
CC   agents are particularly locked nucleic acids (LNA) and the anchor region
CC   comprises a sequence of 10-50, particularly 15-25, T residues. The
CC   capture oligonucleotides are biotinylated and immobilised on a surface by
CC   interaction with streptavidin. The matrix is of plastic, ceramic, glass,
CC   metal, resin, gel, crystalline material and/or membrane, having semi-
CC   conducting properties and especially in the form of a chip. Its surface
CC   is particularly a layer of (bio)molecular filaments and binding of single
CC   stranded nucleic acids to the surface is (quasi)covalent, supramolecular,
CC   physical, stimulated by an electrical field or through a molecular sieve.
CC   The method is used (i) for analysis of patterns, especially in mucosal,
CC   hair root, blood, nerve or germ cells and (ii) for determining the
CC   activity of pharmaceuticals and/or nutritional compounds, e.g. food
CC   additives or supplements, especially minerals, trace elements, organic
CC   acids (amino, carboxylic or fatty acid) or their derivatives, salts and
CC   mixtures. The method provides rapid, inexpensive and reproducible
CC   representation of differences in pools of nucleic acids from cells. It
CC   allows imaging of the complete pattern of all nucleic acid in a cell, and
CC   can detect very small differences in the nucleic acid pool. Since the
CC   method is based on comparison of nucleic acid pools, not individual
CC   genes, matrix miniaturisation is possible. ADK01281-ADK01344 represent
CC   capture probes used in the method of the invention.

PT   Identifying polymorphic markers of herbicide resistance in a plant, by
PT   analyzing genomic DNA of herbicide resistant and susceptible plants, and
PT   identifying difference that correlate with resistance or susceptibility.
XX
PS   Example 6; Page 38; 168pp; English.
XX
CC   The invention describes a method of identifying polymorphic markers of
CC   herbicide resistance in a plant. The method involves: isolating genomic
CC   DNA from an herbicide susceptible plant and an herbicide resistant plant
CC   of the same species, performing genetic analysis and identifying
CC   differences between their genomic DNA, identifying the difference that
CC   correlate with herbicide resistance or susceptibility, thus identifying
CC   polymorphic markers. The method is useful for identifying polymorphic
CC   markers of herbicide resistance in a plant e.g. Conyza canadensis, Lolium
CC   rigidum and goosegrass species, where the herbicides include glyphosate,
CC   paraquat and sulfonyl urea moieties. This sequence represents a primer
CC   associated with the identification of polymorphic markers of herbicide
CC   resistance

PT   Vaccinating against tumors, infectious diseases, allergies and asthma
PT   using immunostimulatory Py-rich and TG nucleic acids.
XX
PS   Claim 101; Page 56; 338pp; English.
XX
CC   The present invention relates to a method for stimulating an immune
CC   response. The method comprises administering an immunostimulatory nucleic
CC   acid to a non-rodent subject in sufficient quantity to stimulate an
CC   immune response. The present sequence is one such immunostimulatory
CC   nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich
CC   (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects
CC   against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae
CC   and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma,
CC   haemophilus, campylobacter, clostridium, Escherichia coli and/or
CC   staphylococcus), fungal antigens and/or parasitic antigens. The method is
CC   also useful for preventing cancer, asthma, infectious disease, allergy or
CC   immune deficiency. The present sequence can also be used to redirect a
CC   Th2 to a Th1 immune response and to activate immune cells. Note: the
CC   present sequence may have a phosphorothioate backbone

CC   The present invention relates to identifying a rice variety as
CC   amplification genetic marker and identifying whether test rice variety is
CC   any one of the 32 rice varieties e.g., Kasalath, breath which came or
CC   Hayamasari, Italica Livorno, Dunghan Shali, Arroz Da Terra, Fany, USSR22,
CC   Nihonbare. The method is useful for identifying rice variety and
CC   identifies excellent rice variety. The present sequence represents a base
CC   - containing SSR sequence of the invention.

PT   Identifying individuals predisposed to alcohol tolerance and dependence
PT   comprises screening the sample for a biomarker based on polymorphism.
XX
PS   Example 9; SEQ ID NO 4; 99pp; English.
XX
CC   The present sequence is that of the dinucleotide repeat region of the
CC   human D16S475.R11 allele ADR23191. Case-control association studies for
CC   alcohol abuse, alcohol consumption and alcohol dependence were performed
CC   using polymorphic markers in the human 16p13.3 locus and in the human
CC   16q12.2 locus. Chi-square analysis showed a negative association between
CC   multiple subject characteristics and the D16S475.R11 allele. However,
CC   upon further more sophisticated statistical analysis, this relationship
CC   could not be confirmed. The invention relates to compositions and methods
CC   for determining whether an individual is predisposed to or protected from
CC   alcoholism. It provides genetic markers useful for the diagnosis,
CC   characterisation, and treatment or prevention of alcohol tolerance, abuse
CC   and/or dependence.

PT   PCR amplification of long nucleic acid sequences - using a combination of
PT   the Thermus thermophilus and pref. Thermococcus litoralis DNA polymerase.
XX
PS   Example 2; Page 13; 25pp; English.
XX
CC   A set of primers (Q97424-Q97445) was designed to enable the PCR
CC   amplification of phage lambda target sequences ranging in size from 1.5-
CC   42.2 kb in length. Each primer of the set was designed to have approx.
CC   the same optimal annealing temp. (Tm= ca.68 deg.C), formimg a hybrid of
CC   12 G-C pairings and 8-11 A-T pairings. A new method was used to amplify
CC   the large genomic sequences in which Thermus thermophilus DNA polymerase
CC   was used in combination with a second DNA polymerase from Thermococcus
CC   litoralis, Pyrococcus sp. or Thermatoga maritima. Amplified products of
CC   22.8 kb, 39 kb and (at lower yields) 42.2 kb were observed. The present
CC   sequence (primer CF1005) is complementary to nucleotides 1841-1860 of the
CC   phage lambda genome sequence (Genbank Acc.No. M17233) and has a Tm of 66
CC   deg.C

PT Determining the concentration of a target nucleic acid, useful e.g. for
PT detecting genetic mutations, comprises using a fluorescently labeled
PT probe in which emission is reduced by binding to the target nucleic acid.
XX
PS Example 6; Page 23; 55pp; English.
XX
CC The invention relates to the determination of the concentration of a
CC nucleic acid target, using a fluorescently labeled probe which produces
CC reduced fluorescence emission when hybridised to the target nucleic acid.
CC The method comprises measuring the reduction in emission caused by
CC hybridisation. The new method is particularly used to quantify target
CC nucleic acids by a real-time polymerase chain reaction, e.g. for
CC quantifying microbial cells in co-cultures or symbiotic systems, for
CC detecting gene mutations or polymorphisms, and for analysing melting
CC curves of target nucleic acids to determine a Tm value. Methods of the
CC invention allow target nucleic acids to be quantified quickly, easily and
CC accurately. Particularly there is no need to remove unbound probe, and no
CC materials are introduced that inhibit amplification by Taq polymerase (so
CC conventional PCR conditions can be used). The specificity of PCR is kept
CC high (amplification of primer dimers is delayed), and the limit of
CC quantitation is reduced. Complex probes are not needed, and amplification
CC can be monitored in real time. The working graph for data analysis
CC (automatically generated by a computer) has a higher correlation
CC coefficient than conventional graphs so more accurate quantitation is
CC possible. The current sequence represents a synthetic
CC deoxyribooligonucleotide that was used for investigating the effects of
CC the number of G(s) in each target nucleic acid, and the number of G(S) in
CC its corresponding invention nucleic acid probe

PT New DNA polymerase composition consisting of a combination of a first DNA
PT polymerase and a second DNA polymerase, useful for amplifying nucleic
PT acids, particularly long nucleic acid sequences by PCR.
XX
PS Example 1; Page 13; 26pp; English.
XX
CC The invention provides a DNA polymerase composition for the PCR
CC amplification of long (over 10 kb) nucleic acid sequences. The
CC composition includes the DNA polymerase of Thermus thermophilus and a
CC second, thermostable, DNA polymerase that provides 3'-to-5' exonuclease
CC activity. Use of the composition was demonstrated for the amplification
CC of phage lambda genomic sequences of 1.5-42.2 kb, with the second DNA
CC polymerase provided by Thermotoga maritima. Upstream primers (see
CC AAI70282-83) were designed to be used with each of a set of downstream
CC primers (see AAI70284-303) including the present primer, CF1005,
CC resulting in a series of target sequences increasing in length by 1-3 kb.
CC Each primer was designed to have approximately the same optimal annealing
CC temperature (68 degree C) by selecting primer sequences of 20-23 bp
CC length such that the hybrid duplex formed between the primer and target
CC sequence would have an overall composition of 12 G-C pairings and 8-11 A-
CC T pairings. Primer CF1005 is complementary to nucleotides 1841-1860 of
CC the phage lambda genome

PT Arraying genome clones.
XX
PS Claim 4; Page 46; 528pp; Japanese.
XX
CC The present invention describes a method of arraying genome clones. The
CC method comprises: (a) clones of the genomic libraries contained in
CC multiwell plates numbered for discrimination are mixed in each of the
CC multiwell plates; (b) a primer designed based on the chromosome marker
CC sequence is added to the mixture to carry out an amplification reaction;
CC (c) a signal corresponding to the marker is detected from the resultant
CC amplified product to specify the discrimination Nos. of the multiwell
CC plates containing the clones having said marker sequence; (d) the order
CC of the markers is changed so that the same discrimination Nos. succeed to
CC the maximum in the specified discrimination Nos. to array the multiwell
CC plates; (e) the clones in the multiwell plates of the specified
CC discrimination Nos. are mixed respectively in each wells of longitudinal
CC and lateral directions; (f) the mixed clones are cultured and the
CC resultant cultures are amplified by using the above primer; (g) signals
CC are detected from the amplified products; (h) the clones in the multiwell
CC plates are specified from the detected result; and (i) the clones are
CC reconstituted as the positions on the chromosome and arrayed. The
CC microarray is useful for gene analysis. ABL42957 to ABL45322 represent
CC PCR primers for human chromosome 1p36-35 DNA, and ABL45323 to ABL45634
CC represent PCR primers for human chromosome 21q22.1, which are
CC specifically claimed for use in the present invention

PT Measurement of nucleic acids, using a nucleic acid probe and analysis of
PT the obtained data.
XX
PS Example 6; Page 18; 34pp; Japanese.
XX
CC This invention relates to a method for measuring nucleic acids using a
CC nucleic acid probe labelled with a fluorochrome. The nucleic acid probe
CC decreases the fluorescence of the fluorochrome when hybridised with a
CC target nucleic acid, the decrease in the fluorescence is measured. The
CC method can be used for measuring a target nucleic acid

PT New antisense oligonucleotides for modulating connective tissue growth
PT factor expression, particularly useful for treating cancers (e.g. breast
PT or prostate cancer), pulmonary or renal fibrosis, scleroderma or
PT atherosclerosis.
XX
PS Claim 3; Page 89; 139pp; English.
XX
CC This invention relates to novel methods for modulating the expression of
CC connective tissue growth factor (CTGF) by antisense oligonucleotides.
CC CTGF has been mapped to human chromosome region 6q23.1, and is also known
CC as ctgrofact, fibroblast inducible secreted protein, fisp-12, NOV2,
CC insulin-like growth factor binding protein-related protein 2, IGFBP-rP2,

CC IGFBP-8, Hcs24 and ecogenin. It is known to stimulate DNA synthesis and
CC promote chemotaxis of fibroblasts, however, it is also upregulated in
CC acute lymphoblastic leukaemia and in tumour or endothelial cells
CC associated with the vasculature. Accordingly, antisense oligonucleotides
CC that inhibit the expression of CTGF in cells or tissues can be used in
CC gene therapy to treat various conditions including hyperproliferative
CC disorders (particularly cancer, e.g. breast, prostate or renal cancer),
CC pulmonary fibrosis, renal fibrosis, scleroderma and atherosclerosis. As
CC such, the present invention describes these antisense oligos as having
CC cytostatic, dermatological and antiarteriosclerotic activities. This
CC oligonucleotide sequence is a chimeric phosphorothioate antisense oligo
CC with 2' MOE wings and a deoxy gap, which is used to inhibit expression of
CC mouse CTGF of the invention.

PT Pharmaceutical composition for treating ailments associated with impaired
PT respiration, has oligo(s) antisense to specific gene(s) or its
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT ubiquinone.
XX
PS Claim 15; SEQ ID NO 911; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.

PS Claim 15; SEQ ID NO 774; 763pp; English.
XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The

CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to
CC thymidines present in the target RNA serves to prevent the breakdown of
CC the oligonucleotides into products that free adenosine into the system
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC prevent any unwanted effects due to it

PT New antisense oligonucleotides of 8-80 nucleobases, useful for treating
PT cancer, diabetes, osteoporosis or various endocrine disorders.
XX
PS Example 16; SEQ ID NO 225; 155pp; English.
XX
CC The invention relates to an antisense oligonucleotide comprising 8-80
CC nucleobases in length targeted to the coding region of a nucleic acid
CC molecule encoding PPAR-delta (peroxisome proliferative activated receptor
CC delta), where the antisense compound inhibits the expression of the PPAR-
CC delta and has any of the 66 sequences of 20 amino acids fully defined in
CC the specification. Also included are a compound of 8-80 nucleobases in
CC length that specifically hybridises with at least an 8-nucleobase portion
CC of a preferred target region on a nucleic acid molecule encoding PPAR-
CC delta and a composition comprising the antisense oligonucleotide and a
CC carrier. The antisense oligonucleotide comprises at least one modified
CC internucleoside linkage (preferably a phosphorothioate linkage), at least
CC one sugar moiety (preferably 2'-O-methoxyethyl moiety) and at least one
CC modified nucleobase (which is a 5-methyl cytosine). The antisense
CC compounds are useful for treating cancer, osteoporosis, diabetes or
CC various endocrine disorders. The Human PPAR delta gene is located on
CC chromosome 6p21. The present sequence is a human PPAR delta cDNA target
CC sequence for the antisense oligonucleotides of the invention.

XX
CC   The invention relates to a kit for diagnosing and treating T-cell
CC   associated diseases which comprises a panel of nucleic acid primers
CC   specifically priming and allowing amplification of each Vbeta gene,
CC   VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant
CC   rejection and diagnosing and treating T-cell associated diseases
CC   including autoimmune diseases, degenerative nervous system diseases,
CC   graft versus host disease, hypersensitivity diseases, infectious diseases
CC   and neoplastic diseases. Autoimmune diseases include Addison's disease,
CC   atrophic gastritis. Degenerative nervous system diseases include multiple
CC   sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
CC   I hypersensitivities such as contact with allergens that lead to
CC   allergies, Type II hypersensitivities such as those present in
CC   Goodpasture's syndrome and Type IV hypersensitivities such as those
CC   manifested in leprosy. Infectious diseases include viral infections
CC   caused by viruses such as HIV, fungal infections such as those caused by
CC   the yeast genus Candida, parasitic infections such as those caused by
CC   schistosomes, filaria and bacterial infections such as those caused by
CC   Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
CC   such as leukaemias, lymphomas and cancers such as cancer of the brain,
CC   breast. The present sequence represents a Vbeta gene repeat sequence.

CC   This invention describes novel antisense oligonucleotides targeted to a
CC   nucleic acid encoding PPAR-delta, which specifically hybridise to and
CC   inhibit expression of PPAR-delta. The oligonucleotide specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on the
CC   nucleic acid molecule encoding the PPAR-delta and comprises at least one
CC   modified internucleoside linkage, which is a phosphorothioate linkage, at
CC   least one modified sugar moiety, which is a 2'-O-methoxyethyl sugar
CC   moiety or at least one modified nucleobase, which is a 5-methylcytosine.
CC   The antisense oligonucleotides are useful for preparing a composition for
CC   treating hyperproliferative disorders, e.g., cancer. The oligonucleotides
CC   of the invention have cytostatic activity and can be used for gene
CC   therapy.

PT   New antisense oligonucleotide, having a sequence targeted to a nucleic
PT   acid encoding PPAR-delta, useful for preparing a composition for treating
PT   hyperproliferative disorder, e.g., cancer.
XX
PS   Example 15; SEQ ID NO 80; 0pp; English.
XX
CC   This invention describes novel antisense oligonucleotides targeted to a
CC   nucleic acid encoding PPAR-delta, which specifically hybridise to and
CC   inhibit expression of PPAR-delta. The oligonucleotide specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on the
CC   nucleic acid molecule encoding the PPAR-delta and comprises at least one
CC   modified internucleoside linkage, which is a phosphorothioate linkage, at
CC   least one modified sugar moiety, which is a 2'-O-methoxyethyl sugar
CC   moiety or at least one modified nucleobase, which is a 5-methylcytosine.
CC   The antisense oligonucleotides are useful for preparing a composition for
CC   treating hyperproliferative disorders, e.g., cancer. The oligonucleotides
CC   of the invention have cytostatic activity and can be used for gene
CC   therapy.

PT   New modified oligo-nucleotide contg guanine quartet - inhibits activity
PT   of viruses, e.g. HIV, and phospholipase A2 and modulates telomere length
PT   of chromosomes.
XX
PS   Example 21; Page 60; 144pp; English.
XX
CC   This sequence may be used for inhibiting replication of human immuno-
CC   deficiency virus (HIV). Oligonucleotides such as this may also be used
CC   for inhibiting activity of HSV, human cytomegalovirus or influenza virus,
CC   or for treating inflammatory and neurological disorders caused by
```

```
CC   phospholipase A2 activity in cases of hyper- proliferation, malignancy,
CC   cardiovascular disease and snake bite. They may also be used for
CC   inhibiting division of malignant cells by modualting telomere length,
CC   which may also retard aging. (Updated on 25-MAR-2003 to correct PN
CC   field.)

PT   New octa:nucleotide with guanosine quartet and phosphoro:thioate links -
PT   is inhibitor of HIV infection by binding to the V3 loop.
XX
PS   Example 3; Col 8; 14pp; English.
XX
CC   AAT34998-T35001 represent HIV inhibitors. Sequences containing only G and
CC   T residues (such as these sequences) are triplex forming
CC   oligonucleotides, and form purine rich promoter elements used to inhibit
CC   transcription. These sequences bind to the HIV gp120 protein at the V3
CC   loop via the internal guanosine quartet. This binding prevents cell-to-
CC   cell and virus-to-cell infection. The sequences may also be used for
```

```
CC   inhibiting viral growth, and other viral genes, for inhibiting the enzyme
CC   PLA2, and to modulate telomere length. In some cases these sequences need
CC   to be chemically modified. The chemically modified oligonucleotides
CC   preferably include at least one phosphorothioate linkage. Other modified
CC   intersugar links, or 2'-modified sugar residues can also be used. These
CC   oligonucleotides can be used for coating gloves, condoms, etc, or for
CC   topical application. (Updated on 25-MAR-2003 to correct PF field.)

PT   Treatment of airway diseases such as asthma - by topically applying
PT   adenosine-free antisense oligo:nucleotide to airway epithelium of
PT   subject.
XX
PS   Claim 5; Page 26; 71pp; English.
XX
CC   A method for treating airway disease in a subject has been produced,
CC   which involves the topical administration of an essentially adenosine
CC   free antisense oligonucleotide (ON) to the airway epithelium of the
CC   subject. The present sequence is an antisense oligonucleotide HUMHDCAS2
CC   specific for the human histidine decarboxylase. The method can be used to
CC   treat airway diseases such as cystic fibrosis, asthma, chronic
CC   obstructive pulmonary disease, bronchitis and other airway diseases
CC   characterised by an inflammatory response. By eliminating adenosine from
CC   the antisense ON, its liberation upon antisense degradation is prevented,
CC   thereby preventing adenosine- induced bronchoconstriction in patients
CC   with hyper-reactive airways

PT   New antisense oligonucleotides used in treatment of, e.g. pulmonary
PT   vasoconstriction.
XX
PS   Disclosure; Page 45; 120pp; English.
XX
CC   The specification describes antisense oligonucleotides (AAX52869-X55271)
CC   directed against at least 2 mRNAs selected from target genes, coding and
CC   non-coding regions of RNAs corresponding to target genes, gene initiation
CC   codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'
CC   -end and the juxta-section between coding and non-coding regions and all
CC   segments of RNAs encoding proteins associated with one or more diseases,
CC   conditions or mixtures. The antisense oligonucleotides may be derived
CC   from sequences AAX55272-74. These multiple target oligonucleotides
CC   (specifically AAX55180-271) can be used for the antisense treatment of
CC   diseases and conditions. Typical diseases and conditions are those
CC   associated with impaired respiration and inflammation, including lung
CC   diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis,
CC   acute asthma, allergies, asthma, impeded respiration, respiratory
CC   distress syndrome, pain, cystic fibrosis, pulmonary hypertension,
CC   pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary
CC   disease (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g.
CC   colon cancer, breast cancer, lung cancer, pancreatic cancer,
CC   hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, as
CC   well as all types of cancers which may metastasize or have metastasized
CC   to the lungs, including breast and prostate cancer

PT   New antisense oligonucleotides useful for treating e.g. pulmonary
PT   vasoconstruction, inflammation, allergies, asthma, hypertension,
PT   bronchitis, emphysema, respiratory distress syndrome, ischemia or
PT   cancers.
XX
PS   Claim 18; Page 394; 1343pp; English.
XX
CC   The present invention describes a new composition comprising an antisense
CC   oligonucleotide (ON) with low adenosine (up to 15%), which targets
CC   nucleic acids involved in bronchoconstriction, allergies, and/or
CC   inflammation. The ON can have antiinflammatory, antiallergic,
CC   antiasthmatic, cytostatic and analgesic activities. The compositions are
CC   useful for the treatment of diseases associated with inflammation,
CC   impaired airways, including lung disease and diseases whose secondary
CC   effects afflict the lungs of a subject. They can be used for treating
CC   e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,
CC   impeded respiration, respiratory distress syndrome, pain, cystic
CC   fibrosis, pulmonary hypertension, emphysema, chronic obstructive
CC   pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,
CC   carcinomas, and cancers which may metastasise to the lungs, including
CC   breast and prostate cancer. The reduction of the adenosine content of the
CC   ONs reduces side effects. The A-containing ONs break down with the
CC   release of deoxyadenosine which activates adenosine receptors causing
CC   bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the
CC   nucleotide sequences given in the sequence listing from the present
CC   invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185
CC   sequences are also called SEQ ID NO:1 to 185, but the sequences differ
CC   from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to
CC   AAA33992) are specifically claimed ONs from the present invention. N.B.
CC   Sequences given in the disclosure of the present invention do not match
CC   up with their corresponding SEQ ID NO: sequences given in the sequence
CC   listing

PT   Low adenosine (A) content antisense oligonucleotides which do not trigger
PT   adenosine receptors during metabolism, useful e.g. for treating cancers
PT   and respiratory obstructions.
XX
PS   Claim 14; Page 141; 1592pp; English.
XX
CC   The present invention describes low adenosine (A) content antisense
CC   oligonucleotides and compositions (I) comprising them. In the antisense
CC   oligonucleotides the A is replaced by a 'Universal' or alternative base.
CC   (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,
CC   immunosuppressive, antiasthmatic, hypotensive and cytostatic activities.
CC   The antisense oligonucleotides and (I) can be used to down-regulate the
CC   expression and or activity of target polypeptides associated with
CC   lung/respiratory disorders and malignancies, such as stimulating and
CC   activating peptide factors and transmitters, transcription factors,
CC   immunoglobulins and antibodies, antibody receptors, cytokines and
CC   chemokines, endogenously produced specific and non-specific enzymes,
CC   binding proteins, adhesion molecules and their receptors, cytokine and
CC   chemokine receptors, adenosine receptors, bradykinin receptors, central
CC   nervous system (CNS) and peripheral nervous and non-nervous system
CC   receptors, CNS and peripheral nervous and non-nervous system peptide
CC   transmitters, defensins, growth factors, vasoactive peptides and
CC   receptors, binding proteins and malignancy associated proteins. The
```

```
CC   antisense oligonucleotides may be used in this way to treat disorders
CC   including respiratory obstruction (especially pulmonary obstruction
CC   and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or
CC   surfactant hypoproduction which are associated with a disease or
CC   condition selected from pulmonary vasoconstriction, inflammation,
CC   allergies, asthma, impeded respiration, respiratory distress syndrome
CC   (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
CC   hypertension, emphysema, chronic obstructive pulmonary disease (COPD),
CC   pulmonary transplantation rejection, pulmonary infections, bronchitis,
CC   and/or cancer. AAF18434 to AAF21543 represent human polynucleotide
CC   fragments and antisense oligonucleotides used in the exemplification of
CC   the present invention

PT   Isolated nucleic acid molecules having polymorphisms in known human genes
PT   e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers
PT   for locating, identifying and characterizing the genes responsible for
PT   disorder-related traits.
XX
PS   Example 28; Page 160; 714pp; English.
XX
CC   This invention relates to the sequence of an isolated nucleic acid
CC   molecule comprising at least one base variation from that of a known
CC   human cytochrome P450 A1 (CYP4501A1), cytochrome P450 A2 (CYP4501A2),
CC   cytochrome P450 02E1 (CYP45002E1), adrenergic receptor beta1 (ADBR1),
CC   aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
CC   (ARNT), cathepsin S (CTSS), cyclooxgenase 2 (COX2), diazepam binding
CC   inhibitor (DBI), epoxide hydroxylase 2 (EPHX2), 5-lipoxygenase activating
CC   protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
CC   transferase (HNMT), (kallikrein 2) KLK2, nicotinamide -N-methyl
CC   transferase (NNMT), NADPH quinone oxidoreductase 2 (NQO2),
CC   sulfotransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4
CC   (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
CC   transferase (UGT2B15), urokinase receptor (uPA), multidrug resistance 1
CC   (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3
CC   (MRP3), orphan nuclear receptor (NR1I2), or acetylcholine muscarinic
CC   receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
CC   The polymorphisms in the human genes cited in the invention are useful as
CC   genetic linkage markers for locating and characterising the genes that
CC   are responsible for specific traits within the genome and eventually
CC   identifying the genes responsible for a variety of disorder-related
CC   traits as a result of their e.g., overexpression, constitutive
CC   expression, mutation or underexpression, which may be used in diagnosing
CC   and/or treating the disorders. The nucleic acid molecules comprising the
CC   polymorphic sequences contained in CYP4501A1, CYPP4501A2, CYP4502E1,
CC   ARNT, EPHX2, GST12, NNMT, NQO2, NR1I2, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
CC   MDR1 and/or MDR3 are useful for screening individuals for altered drug
CC   metabolism. The polymorphic sequences contained in CYP4501A1, CYPP4501A2,
CC   AHR, MDR1 and/or MDR3 may also be used to screen individuals for
CC   susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
CC   used to screen for altered cardiovascular function, in COX2 for altered
CC   susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
CC   nervous system function, in FLAP and HNMT for altered pulmonary,
CC   immunological or haematological function, in KLK2 for altered serine
CC   protease activity in the prostate, in LTF for altered immunological or
CC   haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
CC   peripheral nervous system function. The present sequence represents a
CC   polymorphic DNA sequence of the invention

PT Pharmaceutical composition for treating ailments associated with impaired
PT respiration, has oligo(s) antisense to specific gene(s) or its
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT ubiquinone.
XX
PS Disclosure; SEQ ID NO 10404; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.
CC Note: The sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT Sorting single-stranded nucleic acid, useful for analyzing expression
PT patterns and screening active agents, uses capture agent with variable
PT and constant regions.
XX
PS Example; Page 5; 8pp; German.
XX
CC This invention describes a novel method for sorting single-stranded
CC nucleic acids by isolation and hybridisation of nucleic acid pools, then
CC reading out, where the nucleic acids are selectively bound using capture
CC agents that are (a) immobilised on the surface of a solid matrix and (b)
CC comprise variable and non-variable regions. The capture oligonucleotides
CC have a 5'-invariable anchor region, the complement of which is present at
CC least once in each nucleic acid and a 3'-variable, discriminatory region
CC that comprises all possible combinations of up to 10 nucleotides to allow
CC binding of particular sorts of single stranded nucleic acids. The capture
CC agents are particularly locked nucleic acids (LNA) and the anchor region
CC comprises a sequence of 10-50, particularly 15-25, T residues. The
CC capture oligonucleotides are biotinylated and immobilised on a surface by
CC interaction with streptavidin. The matrix is of plastic, ceramic, glass,
CC metal, resin, gel, crystalline material and/or membrane, having semi-
CC conducting properties and especially in the form of a chip. Its surface
CC is particularly a layer of (bio)molecular filaments and binding of single
CC stranded nucleic acids to the surface is (quasi)covalent, supramolecular,
CC physical, stimulated by an electrical field or through a molecular sieve.
CC The method is used (i) for analysis of patterns, especially in mucosal,
CC hair root, blood, nerve or germ cells and (ii) for determining the
CC activity of pharmaceuticals and/or nutritional compounds, e.g. food
CC additives or supplements, especially minerals, trace elements, organic
CC acids (amino, carboxylic or fatty acid) or their derivatives, salts and
CC mixtures. The method provides rapid, inexpensive and reproducible
CC representation of differences in pools of nucleic acids from cells. It
CC allows imaging of the complete pattern of all nucleic acid in a cell, and
CC can detect very small differences in the nucleic acid pool. Since the
CC method is based on comparison of nucleic acid pools, not individual
CC genes, matrix miniaturisation is possible. ADK01281-ADK01344 represent
CC capture probes used in the method of the invention.

PT Pharmaceutical composition for treating asthma, has antisense
PT oligonucleotide containing less percentage of adenosine, targeted to
PT nucleic acids associated with lung airway or lung dysfunction, and
PT bronchodilating agent.
XX
PS Claim 15; SEQ ID NO 10404; 763pp; English.
XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to
CC thymidines present in the target RNA serves to prevent the breakdown of
CC the oligonucleotides into products that free adenosine into the system
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC prevent any unwanted effects due to it

PS Disclosure; Page 11; 22pp; English.
XX
CC The present invention describes a process for the preparation of a
CC nucleic acid sample comprising: (a) providing a nucleic acid sample
CC having a plurality of species of sequences, and providing one or a
CC plurality of kinds of probes having a known sequence substantially
CC complementary to a portion of sequence of the nucleic acid sample; (b)
CC mixing and hybridizing the nucleic acid sample with probes; (c)
CC subsequently recovering nucleic acid molecules; or (i) providing a
CC nucleic acid sample having a plurality of species of sequences, and
CC providing one or a plurality of kinds of probes having a known sequence
CC substantially complementary to a portion of sequence of the nucleic acid
CC sample; (ii) mixing and hybridizing the nucleic acid sample with the
CC probes; (iii) treating the product of (ii) with nuclease activity of an
CC enzyme or the probe itself; and (iv) subsequently recovering the nucleic
CC acid molecules not digested by the nuclease activity in (iii); or (I)
CC providing a nucleic acid sample having a plurality of species of
CC sequences and oligonucleotides primer having predetermined sequences for
CC synthesizing DNA strands; (II) providing one or a plurality of kinds of
CC probes having a known sequence substantially complementary to a portion
CC of a sequence of the nucleic acid sample having such a structure to
CC prevent a polymerase reaction from its 3' end and a nuclease reaction
CC from its 5' end; (III) mixing and hybridizing the nucleic acid sample
CC with the primers and probes; (IV) executing polymerase chain reaction for
CC the samples prepared in (III); and (V) subsequently recovering nucleic
CC acid molecules synthesized in (IV). The method is useful for the
CC preparation of a nucleic acid sample for the analysis of rare expressed
CC genes. The present sequence represents a PCR primer used in the
CC exemplification of the present invention

PT DNA sequences preferentially expressed in IgA nephropathy patients,
PT proteins encoded by them, and antibodies to those proteins.
XX
PS Claim 3; Page 170; 180pp; Japanese.
XX
CC This invention describes novel DNA sequences preferentially expressed in
CC IgA nephropathy patients, and DNA sequences stringently hybridizing to
CC them. Independent claims cover diagnostic reagents for IgA nephropathy
CC incorporating the antisense sequences; the treatment of IgA nephropathy
CC using the antisense sequences for mRNA inhibition; proteins associated
CC with IgA nephropathy, containing sequences encoded by the DNA sequences;
CC antibodies recognizing these proteins; the production of the proteins by
CC culture of host cells transformed with DNA encoding them; diagnostic
CC reagents for IgA nephropathy containing the antibodies; and compositions
CC for the treatment of IgA nephropathy which contain the antibodies. The
CC products of the invention can be used for the diagnosis and treatment of
CC IgA nephropathy. This sequence represents a primer used in the isolation
CC and identification of the human IgA nephropathy-associated proteins
CC described in the method of the invention

CC AAZ36739-41 represent oligo(dT) primers used for modified differential
CC display, in the method of the invention. The specification describes a
CC method for measuring the level of two or more nucleic acid molecules in a
CC target. The method comprises contacting a probe with an arbitrarily or
CC statistically sampled target and detecting the amount of specific binding
CC of the target to the probe. The methods can be used to identify
CC differentially expressed nucleic acid molecules associated with disease
CC states, such as cancer, autoimmune disease, infectious disease, aging,
CC developmental disorder, proliferative disorder or neurological disorder.
CC Alternatively the methods can be used to assess the efficacy or toxicity
CC of or a resistance to a treatment. Also the methods can be used to
CC determine differential expression of nucleic acid molecules in response
CC to a stimulus, e.g. a chemical, drug or growth factor (especially
CC epidermal growth factor), radiation, stress or a pathogen. The methods
CC can also be used to determine co-regulated genes that can be potential
CC targets for drug discovery

PT New nucleic acids that interact, and optionally cleave, target sequences,
PT used to treat cancer.
XX
PS Claim 77; Page 79; 148pp; English.
XX
CC The present invention describes nucleic acids (A) that interact stably
CC with a target sequence and contain at least one phosphoro(di)thioate
CC link, having endonuclease activity. (A), and more generally any catalytic
CC nucleic acid (A') that modulates expression of the oestrogen receptor
CC gene, are used to treat cancer (particularly of breast or endometrium),
CC in vivo or by transforming cells ex vivo and implanting treated cells, or
CC for other conditions associated with levels of oestrogen receptor.
CC Because of the high selectivity for targeted RNA, (A) can also be used to
CC correlate inhibition of gene expression with alterations in phenotype,
CC particularly for identification of therapeutic targets, and as research
CC reagents (for RNA, in the same way that restriction endonucleases are
CC used with DNA). The combination of modifications in (A) improves
CC resistance to nucleases, binding affinity and/or activity. AAA23503 to
CC AAA24747 represent oestrogen receptor hammerhead ribozyme sequences, and
CC AAA24748 to AAA25992 represent their corresponding target sequences.
CC AAA25993 to AAA26105 represent oestrogen receptor hairpin ribozyme
CC sequences, and AAA26107 to AAA26218 represent their corresponding target
CC sequences. AAA26219 to AAA26271 represent other ribozyme sequences and
CC antisense oligonucleotides used in the exemplification of the present
CC invention

PT Pollinosis-associated gene 373 undergoing significantly low expression in
PT subjects with high cedar pollen-specific immunoglobulin-E levels, useful
PT in diagnosis of allergic diseases and screening drug candidates.
XX
PS Example 6; Page 70; 80pp; Japanese.
XX
CC The invention relates to the human pollinosis-associated gene 373 which
CC exhibits significantly reduced expression in the T-cells of individuals
CC with high cedar pollen-specific IgE (immunoglobulin E) levels. The gene
CC was isolated from T-cells from individuals allergic to cedar pollen using

CC the differential display method. The invention also relates also relates
CC to the protein encoded by pollinosis gene 373; expression constructs and
CC host cells comprising pollinosis-associated gene 373 nucleic acids;
CC pollinosis-associated gene 373 primers and probes; antibodies against the
CC protein encoded by the gene; methods of detection of pollinosis-
CC associated gene 373 nucleic acids; and a method of diagnosis of allergic
CC diseases via the detection of pollinosis-associated gene 373 nucleic
CC acids. The invention additionally encompasses methods of screening drug
CC candidates for the treatment of allergic disease by measuring the
CC expression of pollinosis-associated gene 373 in pollen antigen-stimulated
CC T-cells in the presence of a test compound relative to a control.
CC Pollinosis-associated gene 373 is useful in the diagnosis of allergic
CC diseases and in the screening of drug candidates for the treatment of
CC such diseases. The present sequence represents a PCR primer used in the
CC isolation of human pollinosis-associated gene 373 cDNA

XX
CC The invention relates to the human pollinosis-associated gene 787 which
CC exhibits significantly reduced expression in the T-cells of individuals
CC after the pollen-scattering season, relative to expression levels in T-
CC cells before the pollen-scattering season. The gene was isolated from T-
CC cells from individuals allergic to pollen using the differential display
CC method. The invention also relates to pollinosis-associated gene 787
CC primers and probes; methods of detection of pollinosis-associated gene
CC 787 nucleic acids; and a method of diagnosis of allergic diseases via the
CC detection of pollinosis-associated gene 787 nucleic acids. The invention
CC additionally encompasses a method of screening drug candidates for the
CC treatment of allergic disease by measuring the expression of pollinosis-
CC associated gene 787 in pollen antigen-stimulated T-cells in the presence
CC of a test compound relative to a control. Pollinosis- associated gene 787
CC is useful in the diagnosis of allergic diseases and in the screening of
CC drug candidates for the treatment of such diseases. The present sequence
CC represents a PCR primer used in the isolation of human pollinosis-
CC associated gene 787 cDNA

PT Examining allergic diseases by differential display of gene showing
PT different expression particularly increased expression in remission stage
PT in eosinophils of patients, also applicable in screening candidate
PT compounds for remedies.
XX
PS Example 1; Page 57; 72pp; Japanese.
XX
CC The invention relates to a method for examining allergic diseases
CC comprises determining the expression level of a gene containing, the
CC human cDNA appearing as ABK49633 which has homology with
CC acetyltransferases in the eosinophils of a patient and comparing the
CC expression level with that in the eosinophils of a healthy individual
CC (i.e. differential display). Also included are methods of screening for
CC candidate compounds which affect the expression level of the gene or the
CC activity of the protein encoded by the gene (including related proteins
CC and mutants), the use of probes based on the gene sequence in the
CC examination of allergic diseases, the use of reporter constructs in the
CC screening of candidate compounds, a vector containing a the transcription
CC -controlling region of the gene, cells transformed with the vector, an
CC antibody against the protein and a model animal for allergic diseases
CC which is a transgenic non-human vertebrate with lowering of expression
CC intensity of the gene in eosinophils. The method is examining allergic
CC diseases particularly atopic dermatitis which is also applicable in
CC screening candidate compounds for remedies. Such method can be performed
CC in high throughput, at low cost. The present sequence is a differential
CC display PCR primer for the cDNA encoding the human acetyltransferase-like
CC protein 20-90-05

CC The invention relates to the isolation of 6327 nucleotide sequences,
CC fragments of at least 15 consecutive nucleotides of these nucleotides, a
CC sequence having at least 80% identity, after optimal alignment, with the
CC nucleotides, a sequence that hybridizes under stringent conditions with
CC the nucleotides, or the complement, or corresponding RNA, of the
CC nucleotides. The nucleotides are used as probes or primers for detecting,
CC identifying, quantifying and/or amplifying nucleic acids, as in vitro
CC sense and antisense sequences, of nucleotides involved in tumour
CC suppression or reversion, apoptosis and or viral resistance, to produce
CC recombinant polypeptides, and to prepare transgenic animals, as
CC experimental models. The nucleotides (also vectors containing them and
CC cells containing the vectors), the encoded polypeptides and antibodies
CC (Ab) against the polypeptide are useful for prevention and/or treatment
CC of viral infections or diseases characterized by development of tumours
CC or cell degeneration (e.g. Alzheimer's disease or schizophrenia).
CC Analysis of the expression of the nucleotides can be used for diagnosis
CC and/or prognosis of these diseases. The nucleotides and polypeptides can
CC also be used to screen for their specific interactive molecules,
CC potentially useful for treating diseases associated with abnormal
CC expression of the nucleotides.

PT New isolated nucleic acid, useful for treating viral diseases associated
PT with tumors and cell degeneration, also related polypeptides, antibodies
PT and transfected cells.
XX
PS Disclosure; SEQ ID NO 3399; 30pp; French.
XX
CC This invention relates to novel isolated nucleic acid sequences involved
CC in the phenomena of tumour suppression, tumour reversion, apoptosis
CC and/or resistance to viruses. The invention may be useful for the
CC development of compounds with a cytostatic, virucide, neuroprotective,
CC nootropic or neuroleptic activity. The DNA sequences may be useful as
CC probes and primers for detecting, indentifying, quantifying and/or
CC amplifying nucleic acid, for example as one component of a gene chip, in
CC vitro as antisense reagents and for production of recombinant
CC polypeptides. The invention may therefore be useful for preparation of
CC pharmaceuticals for prevention and/or treatment of viral diseases that
CC are characterised by development of tumours or cell degeneration,
CC specifically cancer but also Alzheimer's disease and schizophrenia. The
CC present sequence is that of a nucleic acid sequence of the invention.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/publishedpct_sequences

PT   Examining allergic diseases e.g. atopic dermatitis by differential
PT   display based on gene expression of NOR-1 receptor protein, also
PT   applicable in screening compounds for treatment of allergic diseases.
XX
PS   Example 1; SEQ ID NO 5; 155pp; Japanese.
XX
CC   This invention relates to a novel method for examining allergic diseases
CC   that comprises comparing the expression levels of a gene encoding the NOR
CC   -1 receptor protein between patients and healthy individuals.
CC   Specifically, the NOR-1 gene, also referred to as MINOR, is expressed in
CC   the specialist white blood cells known as eosinophils and is involved in
CC   mediating an allergic reaction. The present invention describes a
CC   differential display method that can identify the expression level of
CC   this gene in order to identify its usefulness in diagnosing allergic
CC   diseases such as atopic dermatitis. Furthermore, compositions can also be
CC   used to screen compounds for the treatment of allergic diseases.
CC   Accordingly, they exhibit various activities including antiallergic,
CC   antiinflammatory and dermatological. This oligonucleotide sequence is a
CC   PCR primer used to amplify human NOR-1 DNA in an exemplification of the
CC   invention.

XX
CC   A method for the analysis of cDNA comprises (a) preparing an aggregate of
CC   double-stranded cDNAs by using an aggregate of mRNAs and a plural type of
CC   labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798)
CC   and using the aggregate of mRNAs as the template for each reverse
CC   transcription primer; (b) digesting each of the prepared aggregates of
CC   the double-stranded cDNAs with restriction enzyme and; (c)
CC   electrophoresing the digested aggregate of cDNAs in seperate lanes. The
CC   method can be used to analyse gene expression rapidly and easily

PT   New stem cell factor polypeptide(s) - for stimulating the growth of
PT   primitive progenitor cells, esp. for treating disorders involving blood
PT   cells.
XX
PS   Example 3; Fig 12C; 127pp; English.
XX
CC   AAT04915-T04922 are oligonucleotide primers and probes used for the
CC   amplification and sequencing of mammalian stem cell factor (SCF). Non-
CC   naturally occuring SCF and C-terminally truncated polypeptides, having
CC   amino acid sequences sufficiently duplicative of naturally ocurring SCF,
CC   stimulate growth of primitive progenitors such as haematopoietic
CC   progenitor cells, neural stem cells and primordial germ stem cells. The
CC   peptides can be used in a composition for treating leucopenia, anaemia or
CC   thrombocytopenia, for enhancing engraftment of bone marrow during
CC   transplantation or for bone marrow recovery after chemotherapy or
CC   radiation-induced bone marrow aplasia or myelosuppression. They can also
CC   be used for treating neoplasia, nerve damage, infertlilty, intestinal
CC   damage or myeloproliferative disorders. Antibodies may be raised against
CC   the peptides for use in detection or neutralisation of SCF in serum. SCF
CC   may be useful for the treatment of AIDS and severe combined
CC   immunodeficiency (SCID) states alone or in combination with other factors
CC   such as IL-7. (Updated on 25-MAR-2003 to correct PF field.)

PT   Preparation of anti-sense nucleic acid - by assigning numerical value to
PT   target mRNA region and preparing new molecule with nucleic acid
PT   complementary to sequence with low value.
XX
PS   Example 3; Page 9; 19pp; Japanese.
XX
CC   The present sequence represents an antisense oligonucleotide for human
CC   derived vascular endothelial cell growth factor (VEGF), used in an
CC   example of the present invention. The present invention describes the
CC   preparation of an antisense nucleic acid (ANA). The method comprises: (a)
CC   using an mRNA sequence of varying regions in which a numerical value (NV)
CC   is assigned to a target region, where the size of NV depends on the
CC   possibility of forming a truly complementary double strand (DS) between
CC   two regions, and (b) preparing ANA with a nucleic acid containing a base
CC   sequence which is truly complementary to a sequence which has a low NV,
CC   where NV assigned to the ability to form DS is based on the difference of
CC   the complementary base sequence to the target. ANA can be used for the
CC   preparation of diagnostic and therapeutic agents. The method can easily
CC   predict ANA target site, therefore enabling easy and rapid preparation of
CC   ANA

PT Analysis of DNA fragment - comprises addition of known common
PT oligonucleotide, amplification of resultant DNA fragment and analysis and
PT labelling of amplified DNA.
XX
PS Example 1; Page 12; 17pp; Japanese.
XX
CC This invention descibes a novel method for the analysis of a DNA fragment
CC which comprises: (i) addition of a known common oligonucleotide sequence
CC to at least one terminal of each DNA fragment, (ii) amplification of the
CC resultant DNA fragment as a primer using a first common primer containing
CC a complementary nucleotide sequence to the above mentioned known common
CC oligonucleotide sequence, a second common primer containing a
CC complementary nucleotide sequence to the prepared known common
CC oligonucleotide sequence optionally having been introduced with
CC complementary nucleotide sequence at a terminal, and a specific primer
CC capable of hybridisation with a DNA fragment containing whole or part of
CC the gene having known sequence, to give amplified DNA, (iii) analysis of
CC the amplified DNA to find the information of the DNA fragment, in which
CC the specific primer is designed to prepare fragments of the common first
CC and second primers and to give short fragment of amplified DNA and (iv)
CC labelling them to make their differentiation. Differentiation of
CC informations of known and unknown genes readily provides information of
CC unknown gene and simultaneous monitoring of signals derived from minor
CC genes. Furthermore, labelling of DNAs according to functions of known
CC genes can be performed. AAZ09189-Z09201 represent oligonucleotide primers
CC used to illustrate the method of the invention

PT   Production of hematopoietic cells suitable for administration to a
PT   subject using progenitor cells and expanding the cells using stem cell
PT   factor.
XX
PS   Example 3; Fig 12C; 123pp; English.
XX
CC   A method has been developed of making haematopoietic cells suitable for
CC   administration to a subject. The method comprises: (a) obtaining
CC   haematopoietic progenitor cells from a donor; and (b) expanding the cells
CC   by adding to the cells a haematopoietically effective dose of a
CC   polypeptide product having at least part of the primary structural
CC   confirmation and one or more of the biological properties of naturally
CC   occurring stem cell factor (SCF). The method is useful for stimulating
CC   primitive progenitor cells including early haematopoietic progenitor
CC   cells which are capable of maturing to erythroid, megakaryocyte,
CC   granulocyte, lymphocyte and macrophage cells. SCF results in absolute
CC   increases in haematopoietic cells of both myeloid and lymphoid lineages.
CC   SCF is useful for treating haematopoietic disorders. The method is useful
CC   for expanding early haematopoietic progenitors in syngeneic, allogeneic
CC   or autologous bone marrow transplant. SCF is useful for enhancing the
CC   efficiency of gene therapy based on transfecting haematopoietic stem
CC   cells. SCF is also useful for combating the myelosuppressive effects of
CC   anti-HIV drugs such as AZT and for enhancing haematopoietic recovery
CC   after acute blood loss and as a boost to the immune system for fighting
CC   neoplasia (cancer). The present sequence represents a universal
CC   oligonucleotide which is used in an example from the present invention

PT   Enhancing efficiency of transfer of polynucleotide into a target
PT   mammalian cell in vitro, involves exposing cell that expresses a stem
PT   cell factor receptor to stem cell factor, and introducing polynucleotide
PT   into cell in vitro.
XX
PS   Example 3; Fig 12C; 210pp; English.
XX
CC   The present invention describes a method for enhancing (E) the efficiency
CC   of transfer of a polynucleotide (I) into a target mammalian cell (II) in
CC   vitro, comprising exposing (II) that expresses a stem cell factor (SCF)
CC   receptor to a biologically active SCF, its analogue or fragment, which
CC   induces cell proliferation, and introducing (I) to (II) in vitro.
CC   Exposure of SCF to (II) results in increased uptake of (I) into the cell.
CC   The method is useful for enhancing the efficiency of the transfer of a
CC   polynucleotide into a target mammalian cell in vitro. The method is
CC   useful in gene therapy techniques. AAH41301 to AAH41364 and AAB98351 to
CC   AAB98390 represent sequences used in the exemplification of the present
CC   invention

CC The present sequence for universal PCR primer 220-3 is 1 of 8 universal
CC oligonucleotides (AAS04110-AAS04117) used in the isolation of the human
CC SCF (stem cell factor) cDNA sequence. The present invention relates to
CC novel stem cell factors (AAU02453-AAU02458, AAU02460, AAU02461) and the
CC polynucleotides encoding them. SCF stimulate primitive progenitor cells
CC including early haematopoietic progenitor cells. The invention also
CC describes SCF peptides (AAU02462-AAU02481) and the oligonucleotides
CC (AAS04081-AAS04117) used in the isolation of human and rat SCF sequences.
CC The polynucleotide encoding SCF is useful for producing SCF and useful in
CC gene therapy. It is useful for treating disorders involving blood cells
CC such as myelofibrosis, metastatic carcinoma, acute leukaemia, multiple
CC myeloma, Hodgkin's disease, lymphoma, Gaucher's disease, anaemia,
CC congestive splenomegaly, Kala azar, sarcoidosis, military tuberculosis,
CC disseminated fungus disease, Fulminating septicemia, malaria, vitamin B12
CC and folic acid deficiency, pyridoxine deficiency, and hypopigmentation
CC disorders such as piebaldism and vitiligo

CC The present invention provides the protein and coding sequences of
CC mammalian stem cell factors (SCFs). These are capable of stimulating the
CC growth of early haematopoietic progenitor cells, neural stem cells and
CC primordial germ stem cells. The sequences are useful in the treatment of
CC leukaemias, haematopoietic disorders, aplastic anaemia, paroxysmal
CC nocturnal haemoglobinuria, malaria, pigmentation disorders, neurological
CC and intestinal damage, infertility, AIDS and severe combined
CC immunodeficiency (SCID). The present sequence is primer used to amplify
CC an SCF in the exemplification of the invention

PT   Sensitively detecting proximity changes in a system that utilizes an
PT   interacting fluorophore and quencher, for high sensitivity applications,
PT   involves utilizing a metal surface as quencher.
XX
PS   Example 2; Page 26; 62pp; English.
XX
CC   The present sequence is that of a perfectly matched target sequence for a
CC   molecular beacon comprising an oligonucleotide probe (see ABL57069)
CC   covalently attached at the 3' end to fluorescent dye and at the 5' end to
CC   a nanoparticle. In the native state, the probe forms a hairpin
CC   conformation with hybridised termini. The proximity of the fluorophore
CC   and quencher (gold nanoparticle) in the molecular beacon results in
CC   little or no detectable fluorescence. Upon hybridisation of the central
CC   complementary stretch of the probe to a target sequence, such as the
CC   present sequence, the hairpin undergoes a conformational change resulting
CC   in an increase in fluorescence, the extent of which is proportional to
CC   the amount of target sequence present. Single mismatches can be detected.
CC   The invention relates generally to the use of metal surface quenchers
CC   such as particles or films for high sensitivity applications in, for
CC   example, detection and diagnostic systems

PT Novel non-naturally-occurring stem cell factor polypeptide, useful for
PT treating leucopenia, thrombocytopenia, anemia and for enhancing
PT engraftment of bone marrow during transplantation in a mammal.
XX
PS Example 3; Fig 12C; 217pp; English.
XX
CC The present invention relates to novel non-naturally-occurring stem cell
CC factor (SCF) polypeptides having an amino acid sequence sufficiently
CC duplicative of that of naturally-occurring SCF to allow possession of
CC haematopoietic biological activity of naturally occurring SCF. Sequences
CC of the invention are useful for treating leucopaenia, thrombocytopaenia,
CC anaemia and for enhancing bone marrow recovery in treatment of radiation,
CC engraftment of bone marrow during transplantation in mammals and chemical
CC or chemotherapeutic induced bone marrow aplasia or myelosuppression. They
CC are also useful for treating acquired immune deficiency in a human, nerve
CC damage, neoplasia, infertility, myeloproliferative disorder, intestinal
CC damage in a mammal. SCF sequences are useful for preparing biologically
CC active polymer polypeptide adduct, for enhancing transfection of early
CC haematopoietic progenitor cells with a gene, and transfer of a gene into
CC a mammal. They are useful for treating myelofibrosis, myelosclerosis,
CC osteopetrosis, metastatic carcinoma, acute leukaemia, multiple myeloma,
CC Hodgkin's disease, lymphoma, Gaucher's disease, Niemann-Pick disease,
CC Letterer-Siwe disease, refractory erythroblastic anaemia, Di Guglielmo
CC syndrome, congestive splenomegaly, Kala azar, sarcoidosis, primary
CC splenic pancytopaenia, disseminated fungus disease, malaria, military
CC tuberculosis, Fulminating septicaemia, pyridoxine deficiency, vitamin B12
CC and folic acid deficiency, Diamond Blackfan anaemia, hypopigmentation
CC disorders such as piebaldism, AIDS (acquired immune deficiency syndrome)
CC and vitiligo. The present sequence is a PCR primer which is used for
CC amplifying the 5' end of rat SCF cDNA. This sequence is used in the
CC exemplification of the invention

PT Production of a human stem cell factor (SCF) polypeptide for treating
PT disorders involving blood cells, such as leukemia, comprises culturing
PT mammalian cells comprising non-human SCF promoter DNA linked to DNA
PT encoding the human SCF.
XX
PS Example 3; Fig 12C; 120pp; English.
XX
CC The present invention relates to novel stem cell factors (SCFs),
CC polynucleotide sequences encoding the SCFs, and methods of producing
CC them. SCFs are involved in the blood-forming (haematopoietic) system in
CC mammals, particularly humans. The method of the invention is useful for
CC the production of human SCF. The stem cell factors are useful to treat
CC disorders involving blood cells e.g. metastatic carcinoma, acute
CC leukaemia, multiple myeloma, Hodgkin's disease, lymphoma, refractory
CC erythroblastic anaemia, miliary tuberculosis, disseminated fungus
CC disease, malaria, and vitiligo. The present sequence representing a
CC universal oligonucleotide for SCF DNA is used in the examples of the
CC present invention

XX
CC The present invention relates to a method for detecting interactions
CC between biological components using a nonlinear optical technique. The
CC invention is used for screening candidate binding partner(s) for binding
CC to test molecule. It can also be used to detect changes in orientation or
CC conformation of the probe and/or target. The present sequence is a target
CC oligonucleotide used in nonlinear optical technique

PT New non-natural stem cell factor, useful for treating e.g. leucopenia or
PT immune deficiency, also related nucleic acid and antibodies.
XX
PS Disclosure; SEQ ID NO 32; 217pp; English.
XX
CC The invention relates to stem cell factor (SCF) polypeptides with
CC haematopoietic activity and the polynucleotides encoding them. The
CC polypeptides are used for treating infertility, intestinal damage,
CC myeloproliferative disorders, leucopenia, thrombocytopenia or anaemia,
CC for improving engraftment of bone marrow transplants, for enhancing bone
CC marrow recovery after radiotherapy or chemotherapy and in treatment of
CC immune deficiency, neoplasia, nerve damage, osteoporosis, metastatic
CC carcinoma, leukaemia and miliary tuberculosis. The SCF polypeptides are
CC also used to expand haematopoietic progenitor cells for transplantation
CC and to prepare such cells for transfection with a gene. The SCF
CC polynucleotides can be used for recombinant expression of the
CC polypeptides and also as probes for mapping of the SCF gene, for
CC identifying SCF-related diseases and as a marker for neighbouring genes.
CC Antibodies raised against the polypeptides are useful in diagnosis and to
CC remove SCF from blood. This sequence represents SCF related DNA of the
CC invention.

PT Screening of candidate binding partners for binding to test molecule
PT comprises illuminating sample with light beams and measuring physical
PT properties of nonlinear optical light beam emanating from sample.
XX
PS Disclosure; SEQ ID NO 1; 58pp; English.
XX
CC The invention describes screening a candidate binding partner by
CC illuminating the sample with light beams at fundamental frequencies to
CC binding partners, and measuring physical properties of a nonlinear
CC optical light beam emanating from sample. On binding to the test molecule
CC the properties change relative to that in absence of exposure of the test
CC molecule. The invention is used in the screening of candidate binding
CC partners for binding to test molecule. This sequence represents a
CC molecular beacon analogue, an exemplary test molecule of the invention.

PT Pharmaceutical composition for treating ailments associated with impaired
PT respiration, has oligo(s) antisense to specific gene(s) or its
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT ubiquinone.
XX
PS Claim 15; SEQ ID NO 777; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.
CC Note: The sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT nucleic acids associated with lung airway or lung dysfunction, and

```
PT   bronchodilating agent.
XX
PS   Claim 15; SEQ ID NO 777; 763pp; English.
XX
CC   This invention describes a novel composition (a) a first active agent,
CC   comprising oligonucleotides, effective for alleviating
CC   bronchoconstriction, respiratory tract inflammation, allergies and
CC   reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC   surfactant depletion or hyposecretion, when administered to a mammal. The
CC   oligonucleotides are derived from a gene encoding or regulating
CC   expression of a target polypeptide associated with lung airway or lung
CC   dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC   The invention also describes a kit, that comprises: (a) a delivery
CC   device, in separate containers, (b) the oligonucleotides, (c)
CC   instructions for adding a carrier and for use of the kit. The composition
CC   of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC   analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC   beta-adrenergic agonist. The composition is useful for preventing or
CC   treating a respiratory, lung or malignant disease. The administered
CC   composition comprises oligo and is administered to reduce the production
CC   or availability, or to increase the degradation of the target mRNA or to
CC   reduce the amount of target polypeptide present in the lungs. The
CC   pulmonary obstruction, and/or bronchoconstriction and/or lung
CC   inflammation, allergies and/or surfactant hypoproduction are associated
CC   with a disease or condition such as pulmonary vasoconstriction,
CC   inflammation, allergies, asthma, impeded respiration, respiratory
CC   distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC   hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC   transplantation rejection, pulmonary infections, bronchitis or cancer.
CC   The reduced adenosine content of the anti-sense oligos corresponding to
CC   thymidines present in the target RNA serves to prevent the breakdown of
CC   the oligonucleotides into products that free adenosine into the system
CC   e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC   prevent any unwanted effects due to it

PT Preparing a human stem cell factor (SCF) polypeptide, useful for treating
PT hematopoietic disorders, e.g., aplastic anemia, comprises growing host
PT cells transformed or transfected with DNA encoding a human SCF.
XX
PS Example 3; SEQ ID NO 32; 210pp; English.
XX
CC The invention relates to preparing a (vertebrate) human stem cell factor
CC (SCF) polypeptide comprising growing host cells transformed or
CC transfected with DNA encoding a human SCF that stimulates growth of
CC haematopoietic progenitor cells under nutrient conditions, the DNA being
CC operatively linked to an expression control sequence, and isolating the
CC polypeptide produced. Also included is a recombinant host cell
CC transformed or transfected with an expression construct comprising a
CC vertebrate SCF polypeptide-encoding DNA operatively linked to a
CC heterologous expression regulatory sequence, permitting the expression of
CC the vertebrate SCF polypeptide in the host cell. Disclosed as new are rat
CC and human nucleic acids encoding SCF, SCF proteins from a number of other
CC mammals and recombinantly expressed SCF protein fragments. The DNA
CC sequences are useful for effecting the large scale synthesis of SCF by a
CC variety of recombinant techniques or for generating new and useful viral
CC and circular plasmid DNA vectors, new and useful transformed and
CC transfected prokaryotic and eukaryotic host cells, and new and useful
CC methods for cultured growth of such host cells capable of expression of
CC SCF and its related products. The DNA sequences are also useful as
CC labelled probes in isolating human genomic DNA encoding SCF, in methods
CC of protein synthesis, in genetic therapy in humans and other mammals, and
CC in developing transgenic mammalian species which may serve as eukaryotic
CC hosts for production of SCF and SCF products in quantity. The SCF is
CC useful for treating haematopoietic disorders, e.g., aplastic anaemia,
CC paroxysmal nocturnal haemoglobinuria, myelofibrosis, myelosclerosis,
CC osteopetrosis, metastatic carcinoma, acute leukaemia, multiple myeloma,
CC Hodgkin's disease, lymphoma, Gaucher's disease, Niemann-Pick disease,
CC Letterer-Siwe disease, refractory erythroblastic anaemia, Di Guglielmo
CC syndrome, congestive splenomegaly, Kala awar, sarcoidosis, primary
CC splenic pancytopaenia, miliary tuberculosis, disseminated fungus disease,
CC Fulminating septicaemia, malaria, vitamin B 12 and folic acid deficiency,
CC pyridoxine deficiency, Diamond Blackfan anaemia, and hypopigmentation
CC disorders such as piebaldism and vitiligo. The SCF are also useful for
CC treating neurological damage, infertility states, intestinal damage
CC resulting from irradiation or chemotherapy, and AIDS. SCF is also useful
CC for enhancing haematopoietic recovery after acute blood loss and as a
CC boost to the immune system for fighting neoplasia (cancer). The present
CC sequence is a universal SCF PCR primer used in the isolation of SCF DNA.

PT   Recombinant vaccinia virus containing fusion HIB gag gene - for
PT   production in host cells of gag protein for use as vaccine.
XX
PS   Example 1; Page 66; 84pp; Japanese.
XX
CC   AAV35388-V35414 are primers used in a method which results in a
CC   recombinant vaccinia virus comprising of a gag gene from a retrovirus
CC   such as HIV-1 or HIV-2, fused to a DNA fragment containing an epitope
CC   region (30-300 bases in length) of a retroviral gene other than the gag
CC   gene. The gag gene may be altered so as to produce a gag protein modified
CC   from the natural sequence by the addition, deletion or substitution of at
CC   least 1 amino acid residue. The fusion gene is inserted into a region of
CC   a vaccinia virus not essential to its propagation, to give a recombinant
CC   vaccinia virus vector which is used to transform a host cell (such as
CC   HeLa, Vero, VEF, rabbit kidney RK13 or human myeloma TK-143 cells). Upon
CC   culturing the host cell produces particulate structures containing the
CC   fusion gag protein. The recombinant vaccinia virus or the fusion gag
CC   protein particles may be used in the production of vaccines for
CC   protecting against infection with retroviruses such as HIV

PT   Sensitively detecting proximity changes in a system that utilizes an
PT   interacting fluorophore and quencher, for high sensitivity applications,
PT   involves utilizing a metal surface as quencher.
XX
PS   Example 3; Page 62; 62pp; English.
XX
CC   The present sequence is that of a perfectly matched target sequence for a
CC   molecular beacon comprising an oligonucleotide probe (see ABL57069)
CC   covalently attached at the 3' end to fluorescent dye and at the 5' end to
CC   a nanoparticle. In the native state, the probe forms a hairpin
CC   conformation with hybridised termini. The proximity of the fluorophore
CC   and quencher (gold nanoparticle) in the molecular beacon results in
CC   little or no detectable fluorescence. Upon hybridisation of the central
CC   complementary stretch of the probe to a target sequence, such as the
CC   present sequence, the hairpin undergoes a conformational change resulting
CC   in an increase in fluorescence, the extent of which is proportional to
CC   the amount of target sequence present. Single mismatches can be detected.
CC   The invention relates generally to the use of metal surface quenchers
CC   such as particles or films for high sensitivity applications in, for
CC   example, detection and diagnostic systems

PT   Isolated nucleic acid molecules having polymorphisms in known human genes
PT   e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers
PT   for locating, identifying and characterizing the genes responsible for
PT   disorder-related traits.
XX
PS   Example 13; Page 124; 714pp; English.
XX
CC   This invention relates to the sequence of an isolated nucleic acid
CC   molecule comprising at least one base variation from that of a known
CC   human cytochrome P450 A1 (CYP4501A1), cytochrome P450 A2 (CYP4501A2),
CC   cytochrome P450 02E1 (CYP45002E1), adrenergic receptor beta1 (ADBR1),
CC   aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
CC   (ARNT), cathepsin S (CTSS), cyclooxgenase 2 (COX2), diazepam binding
CC   inhibitor (DBI), epoxide hydroxylase 2 (EPHX2), 5-lipoxygenase activating
CC   protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
CC   transferase (HNMT), (kallikrein 2) KLK2, nicotinamide -N-methyl
CC   transferase (NNMT), NADPH quinone oxidoreductase 2 (NQO2),
CC   sulfotransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4
CC   (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
CC   transferase (UGT2B15), urokinase receptor (uPA), multidrug resistance 1
CC   (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3
CC   (MRP3), orphan nuclear receptor (NR1I2), or acetylcholine muscarinic
CC   receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
CC   The polymorphisms in the human genes cited in the invention are useful as
CC   genetic linkage markers for locating and characterising the genes that
```

```
CC   are responsible for specific traits within the genome and eventually
CC   identifying the genes responsible for a variety of disorder-related
CC   traits as a result of their e.g., overexpression, constitutive
CC   expression, mutation or underexpression, which may be used in diagnosing
CC   and/or treating the disorders. The nucleic acid molecules comprising the
CC   polymorphic sequences contained in CYP4501A1, CYPP4501A2, CYP4502E1,
CC   ARNT, EPHX2, GST12, NNMT, NQO2, NR1I2, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
CC   MDR1 and/or MDR3 are useful for screening individuals for altered drug
CC   metabolism. The polymorphic sequences contained in CYP4501A1, CYPP4501A2,
CC   AHR, MDR1 and/or MDR3 may also be used to screen individuals for
CC   susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
CC   used to screen for altered cardiovascular function, in COX2 for altered
CC   susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
CC   nervous system function, in FLAP and HNMT for altered pulmonary,
CC   immunological or haematological function, in KLK2 for altered serine
CC   protease activity in the prostate, in LTF for altered immunological or
CC   haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
CC   peripheral nervous system function. The present sequence represents a
CC   sequencing primer used to sequence the polymorphic genes of the invention

PT Sorting single-stranded nucleic acid, useful for analyzing expression
PT patterns and screening active agents, uses capture agent with variable
PT and constant regions.
XX
PS Example; Page 5; 8pp; German.
XX
CC This invention describes a novel method for sorting single-stranded
CC nucleic acids by isolation and hybridisation of nucleic acid pools, then
CC reading out, where the nucleic acids are selectively bound using capture
CC agents that are (a) immobilised on the surface of a solid matrix and (b)
CC comprise variable and non-variable regions. The capture oligonucleotides
CC have a 5'-invariable anchor region, the complement of which is present at
CC least once in each nucleic acid and a 3'-variable, discriminatory region
CC that comprises all possible combinations of up to 10 nucleotides to allow
CC binding of particular sorts of single stranded nucleic acids. The capture
CC agents are particularly locked nucleic acids (LNA) and the anchor region
CC comprises a sequence of 10-50, particularly 15-25, T residues. The
CC capture oligonucleotides are biotinylated and immobilised on a surface by
CC interaction with streptavidin. The matrix is of plastic, ceramic, glass,
CC metal, resin, gel, crystalline material and/or membrane, having semi-
CC conducting properties and especially in the form of a chip. Its surface
CC is particularly a layer of (bio)molecular filaments and binding of single
CC stranded nucleic acids to the surface is (quasi)covalent, supramolecular,
CC physical, stimulated by an electrical field or through a molecular sieve.
CC The method is used (i) for analysis of patterns, especially in mucosal,
CC hair root, blood, nerve or germ cells and (ii) for determining the
CC activity of pharmaceuticals and/or nutritional compounds, e.g. food
CC additives or supplements, especially minerals, trace elements, organic
CC acids (amino, carboxylic or fatty acid) or their derivatives, salts and
CC mixtures. The method provides rapid, inexpensive and reproducible
CC representation of differences in pools of nucleic acids from cells. It
CC allows imaging of the complete pattern of all nucleic acid in a cell, and
CC can detect very small differences in the nucleic acid pool. Since the
CC method is based on comparison of nucleic acid pools, not individual
CC genes, matrix miniaturisation is possible. ADK01281-ADK01344 represent
CC capture probes used in the method of the invention.

PT   Vegetal sequences including single nucleotide polymorphism - useful, e.g.
PT   to determine polymorphisms in plants, determine strain in plant breeding
PT   and to correlate polymorphisms with phenotypic traits.
XX
PS   Example 2; Page 9; 32pp; English.
XX
CC   The present invention describes a nucleic acid segment comprising at
CC   least 10 contiguous nucleotides from a vegetal sequence including a
CC   polymorphic site which is a single nucleotide polymorphism (SNP), or the
CC   complement of the segment. Also described are: (1) an allele-specific
CC   oligonucleotides hybridising to segment, or their complements, and (2) a
CC   method of analysing nucleic acids from a subject, by determining if a
CC   base is occupying any one (or a set) of polymorphic sites in 261
CC   sequences derived from six maize lines (see AAV47701 to AAV47961). The
CC   segments are useful in fingerprint analysis in plants to determine which
CC   polymorphisms are present, which strain a plant belongs to and to
CC   distinguish between strains. The polymorphisms may correlate with
CC   phenotypic traits (e.g. plant growth rate or crop yield), and the
CC   segments are useful to determine the presence/absence of specific
CC   polymorphisms correlating with the existence/absence of particular
CC   traits. The segments are also useful in marker assisted back-cross
CC   techniques to select plants with a higher percentage of recurrent parent
CC   in a back-cross population. Segments incorporate SNPs which occur more
CC   frequently than other polymorphism types and are therefore more likely to
CC   be located close to genetic loci of interest; different forms of
CC   characterised SNPs are also often easier to detect than other
CC   polymorphism types. AAV40304 to AAV40369 are used in an example from the
CC   present invention as markers and PCR primers. (Updated on 27-AUG-2003 to
CC   correct OS field.)

PT   New radiation hybrid map of the dog, Canine familiaris, genome, useful
PT   for e.g. identifying genes implicated in phenotypic and behavioral traits
PT   or in genetic diseases and for studying dog pedigrees.
XX
PS   Claim 1; Page 80; 87pp; English.
XX
CC   The present invention describes a radiation hybrid map of the dog (Canine
CC   familiaris) genome comprising the genome location of a marker selected
CC   from AAA66139 to AAA66942. The radiation hybrid map is useful for
CC   identifying and localising dog genes, since it covers approximately 80 %
CC   of the dog genome and provides a dense map integrating different types
CC   (i.e. Type I and Type II) of markers. The map and the dog genome markers
CC   (or complementary sequences) are especially useful to identify genes
CC   responsible for phenotypic and behavioural traits in dogs, to identify
CC   morbid genes, to analyse diseases and identify implicated genes in such
CC   diseases and their alleles, and to study dog pedigrees. They may also be
CC   useful for isolating corresponding human gene sequences e.g. genes

PT   Determining the concentration of a target nucleic acid, useful e.g. for
PT   detecting genetic mutations, comprises using a fluorescently labeled
PT   probe in which emission is reduced by binding to the target nucleic acid.
XX
PS   Example 6; Page 23; 55pp; English.
XX
CC   The invention relates to the determination of the concentration of a
CC   nucleic acid target, using a fluorescently labeled probe which produces
CC   reduced fluorescence emission when hybridised to the target nucleic acid.
CC   The method comprises measuring the reduction in emission caused by
CC   hybridisation. The new method is particularly used to quantify target
CC   nucleic acids by a real-time polymerase chain reaction, e.g. for
CC   quantifying microbial cells in co-cultures or symbiotic systems, for
CC   detecting gene mutations or polymorphisms, and for analysing melting
CC   curves of target nucleic acids to determine a Tm value. Methods of the
CC   invention allow target nucleic acids to be quantified quickly, easily and
CC   accurately. Particularly there is no need to remove unbound probe, and no
CC   materials are introduced that inhibit amplification by Taq polymerase (so
CC   conventional PCR conditions can be used). The specificity of PCR is kept
CC   high (amplification of primer dimers is delayed), and the limit of
CC   quantitation is reduced. Complex probes are not needed, and amplification
CC   can be monitored in real time. The working graph for data analysis
CC   (automatically generated by a computer) has a higher correlation
CC   coefficient than conventional graphs so more accurate quantitation is
CC   possible. The current sequence represents a nucleic acid probe of the
CC   invention that was used for investigating the effects or the numbers of
CC   G(s) in each target nucleic acid, and the number of G(s) in its
CC   corresponding invention nucleic acid probe

PT   Fluorescently-labeled nucleic acid probes for assaying nucleic acids and
PT   their polymorphism and mutation, particularly useful in science and
PT   medicine for e.g. analytical applications, disease diagnosis and
PT   microbial identification.
XX
PS   Example 13; Page 62; 152pp; Japanese.
XX
CC   The present invention relates to nucleic acid probes, which are useful
CC   for assaying nucleic acids by hybridising with a target nucleic acid, in
CC   which a single-stranded oligonucleotide is labelled with a fluorescent
CC   substance and a quencher in a manner that the fluorescence intensity of
CC   the hybridisation reaction system is increased after completion of the
CC   hybridisation but no stem loop structure is formed. The probes are useful
CC   for assaying nucleic acids and their polymorphism and mutation,
CC   particularly useful for e.g. analytical applications, disease diagnosis
CC   and microbial identification. The present sequence was used to illustrate
CC   the invention

PT   New antisense oligonucleotides targeted to nucleic acids encoding a CD40
PT   ligand, useful in diagnostic and research applications, or for treating
PT   diseases associated with expression of CD40 ligand, e.g. cancer or
PT   autoimmune disorder.
XX
PS   Claim 3; Page 79; 108pp; English.
XX
CC   The invention relates to novel antisense oligonucleotide targeted to the
CC   human CD40 ligand gene. The oligonucleotides contain either
CC   phosphorothioate internucleotide bonds replacing the usual phosphodiester
CC   internucleotide bonds or have a peptide amide backbone replacing the
CC   sugar phosphate backbone. The nucleotides flanking the central 10
CC   nucleotides have 2'-methoxyethyl nucleotides (2'MOE wings) and the
CC   cytidine nucleotides are all 5-methylcytidines. The antisense compounds
CC   are useful for modulating the expression of CD40 ligand and for treating
CC   diseases or conditions associated with expression of CD40 ligand, e.g.
CC   cancer, autoimmune disorder, inflammatory disorder, or a disease or
CC   condition arising from aberrant apoptosis. The antisense compounds are
CC   also useful for diagnostics, therapeutics, prophylaxis, e.g. to prevent
CC   or delay infection, inflammation or tumor formation, as research reagents
CC   and kits, and in distinguishing between functions of various members of a
CC   biological pathway. Oligonucleotides ACC44014-ACC44091 represent the
CC   antisense oligonucleotides of the invention to inhibit expression of the
CC   human CD40 ligand gene

PT   applications.
XX
PS   Claim 3; Page 89; 137pp; English.
XX
CC   The present invention describes a compound (I) that is 8-50 nucleobases
CC   in length targeted to a nucleic acid molecule encoding a 5'UTR, 3'UTR,
CC   coding region, intron region, exon region, stop codon, intron:exon
CC   junction, exon:exon junction, or 5' mRNA variant of src-c, and which
CC   specifically hybridises with and inhibits the expression of src-c. (I)
CC   have cytostatic, antiinflammatory, osteopathic and antibacterial
CC   activities, and can be used in antisense therapy and in vaccines. The
```

CC antisense compounds (I) can be used for modulating the expression of src-
CC c and for treating diseases or conditions associated with expression of
CC src-c, e.g. aberrant bone remodeling or hyperproliferative disorders,
CC particularly cancer, such as breast cancer, pancreatic cancer, lung
CC cancer, ovarian cancer, oesophageal cancer, neuroblastoma, retinoblastoma
CC or Kaposi's sarcoma. (I) are also useful for diagnostics, therapeutics,
CC prophylaxis, e.g. to prevent or delay infection, inflammation or tumour
CC formation, as research reagents and kits, and in distinguishing between
CC functions of various members of a biological pathway. The present
CC sequence represents a human src-c antisense chimeric phosphorothioate
CC oligonucleotide, which is used in an example from the present invention

CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.

PS Claim 15; SEQ ID NO 3740; 763pp; English.
XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to
CC thymidines present in the target RNA serves to prevent the breakdown of
CC the oligonucleotides into products that free adenosine into the system
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC prevent any unwanted effects due to it

PT   New antisense oligonucleotide for modulating endothelial lipase
PT   expression, for diagnosing, preventing or treating e.g. dyslipidemia, low
PT   high density lipoprotein or cardiovascular disorders.
XX
PS   Claim 3; SEQ ID NO 3702; 1007pp; English.
XX
CC   The present invention relates to antisense oligonucleotides (ADJ21603-
CC   ADJ25510) targeted to human Endothelial Lipase (EL) coding sequence
CC   (ADJ25517), where the antisense oligonucleotide specifically hybridises
CC   with and inhibits the expression of EL. The antisense oligonucleotides
CC   are useful for modulating the expression of endothelial lipase in cells
CC   or tissues to treat diseases associated with EL expression, such as
CC   dyslipidaemia, low high density lipoprotein (HDL), cardiovascular
CC   disorder or metabolic syndrome X. In addition, the oligonucleotides are
CC   used for diagnostics, prophylaxis, or as research reagents or kits.

PT   New antisense compound, having a sequence targeted to a nucleic acid
PT   encoding endothelial specific molecule-1 (ESM-1), useful for preparing a
PT   composition for treating e.g., diabetes, cancer or cardiovascular
PT   disorder.
XX
PS   Claim 3; SEQ ID NO 387; 555pp; English.
XX
CC   The invention describes a new antisense compound, having a sequence
CC   comprising 8-30 bp targeted to a nucleic acid encoding endothelial
CC   specific molecule-1 (ESM-1), that specifically hybridises with the
CC   nucleic acid ESM-1 and inhibits its expression. Also described are: a
CC   composition; inhibiting the expression of ESM-1 in cells or tissues; and
CC   treating an animal having a disease or condition associated with ESM-1.
CC   The compound is useful for preparing a composition for treating diabetes,
CC   cancer, ischaemia or reperfusion injury, or angiogenic, immunological,
CC   cardiovascular or neurological disorder. This sequence represents an
CC   antisense oligonucleotide that can be used to modulate expression of
CC   endothelial specific molecule-1 (ESM-1).

PT   New antisense compound, having a sequence targeted to a nucleic acid
PT   encoding mPGES-1, useful for preparing a composition for treating e.g.,
PT   inflammation, Alzheimer's disease, arthritis, diabetes, cancer or
PT   ischemia.
XX
PS   Claim 4; SEQ ID NO 707; 132pp; English.
XX
CC   The present sequence represents a chimeric antisense oligonucleotide
CC   targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
CC   human mPGES-1 gene is located on chromosome 9, more specifically to
CC   9q34.3. The present invention also describes: (1) antisense compounds,
CC   having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
CC   mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
CC   inhibits its expression; (2) a method of inhibiting the expression of
CC   mPGES-1 in cells or tissues; and (3) a method of treating an animal
CC   having a disease or condition associated with mPGES-1. MPGES-1 chimeric
CC   antisense oligonucleotides and antisense compounds have cytostatic,
CC   antidiabetic, immunomodulator, cardiant, neuroprotective,
CC   antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
CC   ophthalmological, immunomodulatory and cardiovascular activities, and can
CC   be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
CC   can be used for preparing a composition for treating a disease or
CC   condition associated with mPGES-1 e.g., inflammation, Alzheimer's
CC   disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
CC   ophthalmic, immunological, cardiovascular or neurological disorder.

XX
CC The invention relates to oligonucleotides anti-sense to an initiation
CC codon, coding region, 5' or 3' intron-exon junction, intron or region
CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
CC also relates to a method of screening a candidate compound that binds to
CC one or more nucleic acid target(s) or expressed product(s), for the
CC prevention and/or treatment of a respiratory or lung disease. The
CC oligonucleotides are useful for reducing or inhibiting expression of a
CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
CC useful for preventing or treating a respiratory or lung disease. The
CC respiratory or lung disease is associated with hyper-responsiveness to
CC and/or increased levels of, adenosine and/or levels of adenosine A
CC receptor(s), and/or asthma and/or lung allergies associated with
CC inflammation or an inflammatory disease. The respiratory or lung disease
CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
CC hypertension, lung inflammation, bronchitis, airway obstruction or
CC bronchoconstriction. This sequence represents an oligonucleotide of the
CC invention.

PS   Claim 4; SEQ ID NO 141; 226pp; English.
XX
CC   The invention comprises antisense oligonucleotides that are targeted to
CC   the nucleic acids encoding a family of human proteins from mitochondrial
CC   membranes, which bind insulin sensitising, antidiabetic
CC   thiazolodinediones (referred to as: mitoNEET). The antisense
CC   oligonucleotides of the invention are useful for modulating mitoNEET
CC   expression and for treating diseases or conditions associated with
CC   mitoNEET, such as: diabetes, immunological disorders, cardiovascular
CC   disorders including hypertension, neurological disorders, and
CC   ischaemia/reperfusion injuries. The present DNA sequence represents a
CC   mitoNEET-specific antisense oligonucleotide of the invention. NOTE: The
CC   present sequence is a 2'-methoxyethyl (2'-MOE) gapmer with a
CC   phosphorothioate backbone.

PT   Isolated nucleic acid molecules having polymorphisms in known human genes
PT   e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers
PT   for locating, identifying and characterizing the genes responsible for
PT   disorder-related traits.
XX
PS   Example 28; Page 159; 714pp; English.
XX
CC   This invention relates to the sequence of an isolated nucleic acid
CC   molecule comprising at least one base variation from that of a known
CC   human cytochrome P450 A1 (CYP4501A1), cytochrome P450 A2 (CYP4501A2),
CC   cytochrome P450 02E1 (CYP45002E1), adrenergic receptor beta1 (ADBR1),
CC   aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
CC   (ARNT), cathepsin S (CTSS), cyclooxgenase 2 (COX2), diazepam binding
CC   inhibitor (DBI), epoxide hydroxylase 2 (EPHX2), 5-lipoxygenase activating
CC   protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
CC   transferase (HNMT), (kallikrein 2) KLK2, nicotinamide -N-methyl
CC   transferase (NNMT), NADPH quinone oxidoreductase 2 (NQO2),
CC   sulfotransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4
CC   (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
CC   transferase (UGT2B15), urokinase receptor (uPA), multidrug resistance 1
CC   (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3
CC   (MRP3), orphan nuclear receptor (NR1I2), or acetylcholine muscarinic
CC   receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
CC   The polymorphisms in the human genes cited in the invention are useful as
CC   genetic linkage markers for locating and characterising the genes that
CC   are responsible for specific traits within the genome and eventually
CC   identifying the genes responsible for a variety of disorder-related
CC   traits as a result of their e.g., overexpression, constitutive
CC   expression, mutation or underexpression, which may be used in diagnosing
CC   and/or treating the disorders. The nucleic acid molecules comprising the
CC   polymorphic sequences contained in CYP4501A1, CYPP4501A2, CYP4502E1,
CC   ARNT, EPHX2, GST12, NNMT, NQO2, NR1I2, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
CC   MDR1 and/or MDR3 are useful for screening individuals for altered drug
CC   metabolism. The polymorphic sequences contained in CYP4501A1, CYPP4501A2,
CC   AHR, MDR1 and/or MDR3 may also be used to screen individuals for
CC   susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
CC   used to screen for altered cardiovascular function, in COX2 for altered
CC   susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
CC   nervous system function, in FLAP and HNMT for altered pulmonary,
CC   immunological or haematological function, in KLK2 for altered serine
CC   protease activity in the prostate, in LTF for altered immunological or
CC   haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
CC   peripheral nervous system function. The present sequence represents a
CC   polymorphic DNA sequence of the invention

PT Identifying polymorphic markers of herbicide resistance in a plant, by
PT analyzing genomic DNA of herbicide resistant and susceptible plants, and
PT identifying difference that correlate with resistance or susceptibility.
XX
PS Example 6; Page 38; 168pp; English.
XX
CC The invention describes a method of identifying polymorphic markers of
CC herbicide resistance in a plant. The method involves: isolating genomic
CC DNA from an herbicide susceptible plant and an herbicide resistant plant
CC of the same species, performing genetic analysis and identifying
CC differences between their genomic DNA, identifying the difference that
CC correlate with herbicide resistance or susceptibility, thus identifying
CC polymorphic markers. The method is useful for identifying polymorphic
CC markers of herbicide resistance in a plant e.g. Conyza canadensis, Lolium
CC rigidum and goosegrass species, where the herbicides include glyphosate,
CC paraquat and sulfonyl urea moieties. This sequence represents a primer
CC associated with the identification of polymorphic markers of herbicide
CC resistance

PT Sorting single-stranded nucleic acid, useful for analyzing expression
PT patterns and screening active agents, uses capture agent with variable
PT and constant regions.
XX
PS Example; Page 5; 8pp; German.
XX
CC This invention describes a novel method for sorting single-stranded
CC nucleic acids by isolation and hybridisation of nucleic acid pools, then
CC reading out, where the nucleic acids are selectively bound using capture
CC agents that are (a) immobilised on the surface of a solid matrix and (b)
CC comprise variable and non-variable regions. The capture oligonucleotides
CC have a 5'-invariable anchor region, the complement of which is present at
CC least once in each nucleic acid and a 3'-variable, discriminatory region
CC that comprises all possible combinations of up to 10 nucleotides to allow
CC binding of particular sorts of single stranded nucleic acids. The capture
CC agents are particularly locked nucleic acids (LNA) and the anchor region
CC comprises a sequence of 10-50, particularly 15-25, T residues. The
CC capture oligonucleotides are biotinylated and immobilised on a surface by
CC interaction with streptavidin. The matrix is of plastic, ceramic, glass,
CC metal, resin, gel, crystalline material and/or membrane, having semi-
CC conducting properties and especially in the form of a chip. Its surface
CC is particularly a layer of (bio)molecular filaments and binding of single
CC stranded nucleic acids to the surface is (quasi)covalent, supramolecular,
CC physical, stimulated by an electrical field or through a molecular sieve.
CC The method is used (i) for analysis of patterns, especially in mucosal,
CC hair root, blood, nerve or germ cells and (ii) for determining the
CC activity of pharmaceuticals and/or nutritional compounds, e.g. food
CC additives or supplements, especially minerals, trace elements, organic
CC acids (amino, carboxylic or fatty acid) or their derivatives, salts and
CC mixtures. The method provides rapid, inexpensive and reproducible
CC representation of differences in pools of nucleic acids from cells. It
CC allows imaging of the complete pattern of all nucleic acid in a cell, and
CC can detect very small differences in the nucleic acid pool. Since the
CC method is based on comparison of nucleic acid pools, not individual
CC genes, matrix miniaturisation is possible. ADK01281-ADK01344 represent
CC capture probes used in the method of the invention.

PT Sorting single-stranded nucleic acid, useful for analyzing expression
PT patterns and screening active agents, uses capture agent with variable
PT and constant regions.

XX
PS Example; Page 5; 8pp; German.
XX
CC This invention describes a novel method for sorting single-stranded
CC nucleic acids by isolation and hybridisation of nucleic acid pools, then
CC reading out, where the nucleic acids are selectively bound using capture
CC agents that are (a) immobilised on the surface of a solid matrix and (b)
CC comprise variable and non-variable regions. The capture oligonucleotides
CC have a 5'-invariable anchor region, the complement of which is present at
CC least once in each nucleic acid and a 3'-variable, discriminatory region
CC that comprises all possible combinations of up to 10 nucleotides to allow
CC binding of particular sorts of single stranded nucleic acids. The capture
CC agents are particularly locked nucleic acids (LNA) and the anchor region
CC comprises a sequence of 10-50, particularly 15-25, T residues. The
CC capture oligonucleotides are biotinylated and immobilised on a surface by
CC interaction with streptavidin. The matrix is of plastic, ceramic, glass,
CC metal, resin, gel, crystalline material and/or membrane, having semi-
CC conducting properties and especially in the form of a chip. Its surface
CC is particularly a layer of (bio)molecular filaments and binding of single
CC stranded nucleic acids to the surface is (quasi)covalent, supramolecular,
CC physical, stimulated by an electrical field or through a molecular sieve.
CC The method is used (i) for analysis of patterns, especially in mucosal,
CC hair root, blood, nerve or germ cells and (ii) for determining the
CC activity of pharmaceuticals and/or nutritional compounds, e.g. food
CC additives or supplements, especially minerals, trace elements, organic
CC acids (amino, carboxylic or fatty acid) or their derivatives, salts and
CC mixtures. The method provides rapid, inexpensive and reproducible
CC representation of differences in pools of nucleic acids from cells. It
CC allows imaging of the complete pattern of all nucleic acid in a cell, and
CC can detect very small differences in the nucleic acid pool. Since the
CC method is based on comparison of nucleic acid pools, not individual
CC genes, matrix miniaturisation is possible. ADK01281-ADK01344 represent
CC capture probes used in the method of the invention.

PT Detecting genetic alterations associated with cancer comprises providing
PT a target nucleic acid from a patient sample having a predetermined
PT sequence in the normal population, and assessing the nucleic acid for
PT loss of heterozygosity.
XX
PS Example 1; SEQ ID NO 127; 50pp; English.
XX
CC The present invention describes a method for determining a genetic
CC alteration in a nucleic acid for the diagnosis and management of
CC malignant disease. The method comprises providing a target nucleic acid
CC from a patient sample, the target nucleic acid having a predetermined
CC sequence in the normal population; and assessing the target nucleic acid
CC for the extent of loss of heterozygosity relative to predetermined loci,
CC an increased loss of heterozygosity being correlated with enhanced tumour
CC invasiveness and metastasis. Also described is a method for determining
CC the presence or absence of at least one specific nucleotide in a target
CC nucleic acid for the diagnosis and management of malignant disease. The
CC methods are useful in detecting genetic alterations (e.g. single
CC nucleotide polymorphisms (SNPs)) in a defined polynucleotide region as a
CC means to diagnose and manage malignant diseases such as cancer. The
CC present sequence represents a PCR primer used to amplify genomic DNA
CC corresponding to known SNPs located in predetermined regions of human
CC chromosome 1, which is used in an example from the present invention.

PT   Determining the concentration of a target nucleic acid, useful e.g. for
PT   detecting genetic mutations, comprises using a fluorescently labeled
PT   probe in which emission is reduced by binding to the target nucleic acid.
XX
PS   Example 5; Page 21; 55pp; English.
XX
CC   The invention relates to the determination of the concentration of a
CC   nucleic acid target, using a fluorescently labeled probe which produces
CC   reduced fluorescence emission when hybridised to the target nucleic acid.
CC   The method comprises measuring the reduction in emission caused by
CC   hybridisation. The new method is particularly used to quantify target
CC   nucleic acids by a real-time polymerase chain reaction, e.g. for
CC   quantifying microbial cells in co-cultures or symbiotic systems, for
CC   detecting gene mutations or polymorphisms, and for analysing melting
CC   curves of target nucleic acids to determine a Tm value. Methods of the
CC   invention allow target nucleic acids to be quantified quickly, easily and
CC   accurately. Particularly there is no need to remove unbound probe, and no
CC   materials are introduced that inhibit amplification by Taq polymerase (so
CC   conventional PCR conditions can be used). The specificity of PCR is kept
CC   high (amplification of primer dimers is delayed), and the limit of
CC   quantitation is reduced. Complex probes are not needed, and amplification
CC   can be monitored in real time. The working graph for data analysis
CC   (automatically generated by a computer) has a higher correlation
CC   coefficient than conventional graphs so more accurate quantitation is
CC   possible. The current sequence represents a nucleic acid probe of the
CC   invention that was used for investigating the base selectivity of a
CC   target nucleic acid

PT   Identifying a candidate polymorphic repeat within a coding sequence, for
PT   understanding or treating genetic disease, comprises detecting tandem
PT   repeats in a target coding sequence and scoring the repeats for
PT   polymorphic probability.
XX
PS   Example; Col 385; 588pp; English.
XX
CC   The invention discloses a method for identifying a candidate polymorphic
CC   repeat within a coding sequence (expressed sequence tag, EST), which
CC   comprises detecting tandem repeats in a target coding sequence, scoring
CC   the repeats for polymorphic probability and generating a dataset
CC   correlating the repeats with polymorphic probability to identify a
CC   candidate polymorphic repeat. The computational methods (polymorphic
CC   marker prediction of ubiquitous simple sequences, POMPOUS, and Rep-X) are
CC   useful for identifying and detecting candidate polymorphic repeats in
CC   human genes, which can be used to understand, treat or eliminate genetic
```

```
CC   diseases, predispositions or adverse drug-treatment reactions. Examples
CC   of diseases linked to nucleotide repeats are Machado-Joseph, Haw River
CC   syndrome, Huntington's disease, fragile-X syndrome, Fredreich's ataxis,
CC   myotonic dystrophy, hyperandrogenaemia, spinal and bulbar atrophy and
CC   spinocerebellar ataxia. The sequences presented in ABX79676-ABX80022 are
CC   the polymorphic repeats identified for a search of human ESTs

PT   New anti-proliferative substance comprising a radiolabeled DNA carrier,
PT   useful for preventing or treating uncontrolled cellular proliferation
PT   e.g. restenosis, cancer or malignant tumors.
XX
PS   Claim 13; SEQ ID NO 8; 28pp; English.
XX
CC   The invention relates to an anti-proliferative substance for preventing
CC   uncontrolled cellular proliferation comprising a radiolabelled DNA
CC   carrier, where a radioisotope is located internally within the DNA
CC   sequence, at 5' end or at 3' end, and the radiolabelled DNA carrier
CC   penetrates the cell membrane and is retained intracellularly for a time
CC   sufficient for the radio-isotope to effect a dose therapy. The carrier in
CC   the anti-proliferative substance is an oligonucleotide, which is linear
CC   or a plasmid, which is circular. The plasmid is of viral or bacterial
CC   origin. The oligonucleotide is a double- or a single-stranded DNA
CC   sequence, which is conjugated with an antibody for cell-specific
CC   delivery. The oligonucleotide is also conjugated to a stent surface,
CC   cholesterol, oleic acid, linoleic acid, TGFalpha, antibody, TGFbeta,
CC   cytokines or growth factors. The anti-proliferative substance is useful
CC   for preventing or treating uncontrolled cellular proliferation. The
CC   uncontrolled cell proliferation is a restenosis following angioplasty, or
CC   cancer or a malignant tumour. The present sequence represents an
CC   oligonucleotide carrier used in the invention.

PT   New hairpin and hammerhead ribozyme for inhibiting restenosis, cleaves
PT   RNA encoding a cyclin or cell-cycle dependent kinase other than CDK1,
PT   PCNA and Cyclin B1.
XX
PS   Disclosure; Page 60; 109pp; English.
XX
CC   The present invention relates to a hairpin or hammerhead ribozyme,
CC   designed to cleave RNA encoding a cyclin or cell-cycle dependent kinase
CC   other than cell-cycle dependent kinases CDK1, PCNA and Cyclin B1.
CC   Representative examples of ribozyme recognition sites are given in
CC   AAA82415 to AAA86787. The ribozyme of the invention is useful for
CC   inhibiting restenosis by introduction of the ribozyme into cells. The
CC   ribozyme is resistant to endonuclease activity and hence is efficient in
CC   restenosis treatment

PT Treating proliferative skin or eye diseases and scarring, using ribozymes
PT that cleave RNA encoding cytokines involved in inflammation, matrix
PT metalloproteinases, growth factors and cell-cycle dependent kinases.
XX
PS Example 1; Page 139; 408pp; English.
XX
CC The present invention describes a method for treating a proliferative
CC skin or eye disease and scarring. The method involves administering a
CC ribozyme (I) which cleaves RNA encoding a cytokine involved in
CC inflammation, matrix metalloproteinase (MMP), cyclin, cell-cycle
CC dependent kinase, growth factor or a reductase, or administering a
CC nucleic acid molecule (II) comprising a promoter operably linked to a
CC nucleic acid segment encoding (I). (I) can have antipsoriatic,
CC dermatological, cytostatic, antiseborrheic, antidiabetic, antisickling,
CC ophthalmological, vulnerary, keratolytic and virucide activities, and
CC cleaves RNA encoding cytokine involved in inflammation. (I) can be used
CC in gene therapy. (I) and (II) are useful for treating proliferative skin
CC diseases such as psoriasis, atopic dermatitis, actinic keratosis,
CC squamous or basal cell carcinoma and viral or seborrheic wart. They can
CC also be used for treating proliferative eye diseases such as diabetic
CC retinopathy, vitreoretinopathy, sickle cell retinopathy, retinopathy of
CC prematurity and retinal detachment, and for treating and preventing
CC scarring such as keloid, adhesion and hypertrophic or hypertrophic burn
CC scar. AAH57577 to AAH62099 represent sequences used in the
CC exemplification of the present invention

PT New short interfering nucleic acid, useful e.g. for treatment and
PT diagnosis of tumors, downregulates expression of the platelet-derived
PT growth factor receptor gene.
XX
PS Example 3; SEQ ID NO 4; 148pp; English.
XX
CC The invention relates to short interfering nucleic acids (siNA) which
CC downregulate expression of the human platelet-derived growth factor
CC receptor (PDGFr) gene by RNA interference. The siNAs may or may not
CC comprise ribonucleotides and may be double or single stranded. They
CC further comprise sense and antisense regions, or alternatively are
CC assembled from a sense oligonucleotide and an antisense oligonucleotide.
CC Specifically, the siNAs include short interfering RNA (siRNA, double-
CC stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs
CC can be unmodified or chemically modified, can contain
CC deoxyribonucleotides, and can be chemically synthesised, expressed from a
CC vector or enzymatically synthesised. The invention also relates to kits
CC for the in vitro or in vivo delivery of siRNA; conjugates and/or
CC complexes of siRNA; and vectors that express siNA. The siNAs are used to
CC modulate expression of the PDGFr gene in cells, tissue explants or
CC organisms (e.g., by ex vivo gene therapy), or in grafts and transplants
CC for the treatment of a variety of conditions. They may be used for
CC treating leukaemia and solid tumours, restenosis, polycystic kidney
CC disease, bronchiolitis, glomerulonephritis and stroke. The siNAs are also
CC useful for drug screening, diagnosis, therapeutic target identification
CC and validation, genetic engineering, pharmacogenomics, studying gene
CC function, and gene mapping (e.g., of single nucleotide polymorphisms).
CC The present sequence represents the upper strand of a human PDGFr-
CC targeted double-stranded siNA, which is identical to the PDGFr transcript
CC target sequence.

CC   deoxyribonucleotides, and can be chemically synthesised, expressed from a
CC   vector or enzymatically synthesised. The invention also relates to kits
CC   for the in vitro or in vivo delivery of siRNA; conjugates and/or
CC   complexes of siRNA; and vectors that express siNA. The siNAs are used to
CC   modulate expression of the PDGFr gene in cells, tissue explants or
CC   organisms (e.g., by ex vivo gene therapy), or in grafts and transplants
CC   for the treatment of a variety of conditions. They may be used for
CC   treating leukaemia and solid tumours, restenosis, polycystic kidney
CC   disease, bronchiolitis, glomerulonephritis and stroke. The siNAs are also
CC   useful for drug screening, diagnosis, therapeutic target identification
CC   and validation, genetic engineering, pharmacogenomics, studying gene
CC   function, and gene mapping (e.g., of single nucleotide polymorphisms).
CC   The present sequence represents the lower strand of a human PDGFr-
CC   targeted double-stranded siNA, which is identical to the PDGFr transcript
CC   target sequence.

PT   Determining the concentration of a target nucleic acid, useful e.g. for
PT   detecting genetic mutations, comprises using a fluorescently labeled
PT   probe in which emission is reduced by binding to the target nucleic acid.
XX
PS   Example 6; Page 23; 55pp; English.
XX
CC   The invention relates to the determination of the concentration of a
CC   nucleic acid target, using a fluorescently labeled probe which produces
CC   reduced fluorescence emission when hybridised to the target nucleic acid.
CC   The method comprises measuring the reduction in emission caused by
CC   hybridisation. The new method is particularly used to quantify target
CC   nucleic acids by a real-time polymerase chain reaction, e.g. for
CC   quantifying microbial cells in co-cultures or symbiotic systems, for
CC   detecting gene mutations or polymorphisms, and for analysing melting
CC   curves of target nucleic acids to determine a Tm value. Methods of the
CC   invention allow target nucleic acids to be quantified quickly, easily and
CC   accurately. Particularly there is no need to remove unbound probe, and no
CC   materials are introduced that inhibit amplification by Taq polymerase (so
CC   conventional PCR conditions can be used). The specificity of PCR is kept
CC   high (amplification of primer dimers is delayed), and the limit of
CC   quantitation is reduced. Complex probes are not needed, and amplification
CC   can be monitored in real time. The working graph for data analysis
CC   (automatically generated by a computer) has a higher correlation
CC   coefficient than conventional graphs so more accurate quantitation is
CC   possible. The current sequence represents a synthetic
CC   deoxyribooligonucleotide that was used for investigating the effects of
CC   the number of G(s) in each target nucleic acid, and the number of G(S) in
CC   its corresponding invention nucleic acid probe

PT   New X-chromosome gene expressed in haploid cells of the testis, useful
PT   for gene diagnosis, discrimination of sex, separation of sperm,
PT   infertility treatment and chromosomal manipulation.
XX
PS   Example 1; Page 4; 28pp; English.
XX
CC   The present invention relates to genes located on the X-chromosome of
CC   mammals. These genes are specifically expressed in haploid cells of the
CC   testis and encode amino acid sequences having homology with the amino
CC   acid sequence encoded by drosophila germ cell less (gcl) gene. Sequences
CC   of the invention are used for gene diagnosis, discrimination of sex,
CC   separation of sperm, infertility treatment and chromosomal manipulation,
CC   especially in livestock. They are also used in gene therapy. The present
CC   DNA sequence is a PCR primer which is used for the identification of
CC   genes by differential display method

PT   Designing capture oligonucleotide probes for use on a support to which
PT   complementary oligonucleotides hybridize with little mismatch.
XX
PS   Example 5; Fig 29; 300pp; English.
XX
CC   The present invention describes a method (M1) for designing capture
CC   oligonucleotide probes (I) for use on a support to which complementary
CC   oligonucleotide probes (II) will hybridise with little mismatch, where
CC   (I) have melting temperatures within a narrow range. The method is useful
CC   for detecting infectious diseases caused by bacterial infectious agents
CC   e.g. Salmonella, Listeria monocytogenes and Haemophilus influenza, fungal
CC   infectious agents e.g. Cryptococcus neoformans, Candida albicans and
CC   Aspergillus fumigautus, viruses e.g. T-cell lymphocytotrophis cirus,
CC   Epstein-Barr virus and polio virus, and parasitic infectious agents
CC   selected from Onchoverva volvulus, Entamoeba histolytica and Dracunculus
CC   medinesis. The method is also useful for detecting genetic diseases such
CC   as 21 hydroxylase deficiency, Turner Syndrome and obesity defects.
CC   Detecting cancer involving oncogenes, tumour suppressor genes, or genes
CC   involved in DNA amplification, replication, recombination or repair, the
CC   cancer is specifically associated with a gene selected from BRCA1 gene,
CC   p53 gene, human papillomavirus types 16 and 18 and liver cancers. The
CC   method is also used for environmental monitoring, forensics and the food
CC   and feed industry, detecting comprises scanning (using e.g. a scanning
CC   electron microscope and infrared microscope) the support at the
CC   particular sites and identifying if ligation of the oligonucleotide probe
CC   sets occurred and correlating (using a computer) identified ligation to a

PT   New antisense oligonucleotides for modulating human farnesoid X receptor
PT   (FXR) expression, useful for treating conditions associated with FXR in
PT   humans, e.g. cardiovascular disease, atherosclerosis or
PT   hypercholesterolemia.
XX
PS   Claim 3; Page 74; 127pp; English.
XX
CC   The invention relates to antisense compounds, compositions and methods
CC   for modulating the expression of human farnesoid X receptor (FXR). FXR is
CC   also known as NR1H4, retinoid X receptor-interacting protein 14 (RIP14)
CC   and bile acid receptor (BAR). The antisense oligonucleotide is useful for
CC   inhibiting the expression of human FXR in cells or tissues. It is
CC   particularly useful for treating or preventing a disease or condition
CC   associated with FXR in a human, e.g. cardiovascular disease,
CC   atherosclerosis or hypercholesterolaemia. The antisense compound is
CC   useful for diagnostics, therapeutics, prophylaxis, or as research
CC   reagents or kits. It is also used in gene therapy. The present sequence
CC   is an antisense oligonucleotide targetted to human FXR DNA. This sequence
CC   is used to illustrate the method of the invention

PS Disclosure; SEQ ID NO 4961; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an

CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.

XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to
CC thymidines present in the target RNA serves to prevent the breakdown of
CC the oligonucleotides into products that free adenosine into the system
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC prevent any unwanted effects due to it

PT   New antisense oligonucleotide for modulating endothelial lipase
PT   expression, for diagnosing, preventing or treating e.g. dyslipidemia, low
PT   high density lipoprotein or cardiovascular disorders.
XX
PS   Claim 3; SEQ ID NO 3595; 1007pp; English.
XX
CC   The present invention relates to antisense oligonucleotides (ADJ21603-
CC   ADJ25510) targeted to human Endothelial Lipase (EL) coding sequence
CC   (ADJ25517), where the antisense oligonucleotide specifically hybridises
CC   with and inhibits the expression of EL. The antisense oligonucleotides
CC   are useful for modulating the expression of endothelial lipase in cells
CC   or tissues to treat diseases associated with EL expression, such as
CC   dyslipidaemia, low high density lipoprotein (HDL), cardiovascular
CC   disorder or metabolic syndrome X. In addition, the oligonucleotides are
CC   used for diagnostics, prophylaxis, or as research reagents or kits.

PT Farnesoid X Receptor (FXR) or for treating diseases associated with FXR,
PT e.g. diabetes, immunological disorders, cardiovascular disorders,
PT gallstones or obesity.
XX
PS Claim 4; SEQ ID NO 23; 150pp; English.
XX
CC The invention relates to an antisense compound 8-30 nucleobases in length
CC targeted to a nucleic acid molecule encoding Farnesoid X receptor (FXR),
CC where the antisense compound specifically hybridizes with and inhibits
CC the expression of FXR. The composition and methods are useful for
CC inhibiting the expression of FXR (Farnesoid X receptor) in cells or
CC tissues, or for treating diseases or conditions associated with FXR, such
CC as diabetes, immunological disorders, cardiovascular disorders, e.g.
CC dyslipidemia and its symptoms, atherosclerosis, low HDL (high density
CC lipoprotein), elevated LDL (low density lipoprotein) or
CC hypercholesterolemia, gallstones, hypertriglyceridemia, obesity,
CC neurological disorders, or ischemia/reperfusion injury. In addition, the
CC composition is used for diagnostics, prophylaxis, or as research reagents
CC or kits. This sequence corresponds to an antisense oligonucleotide of the
CC invention.

PS Disclosure; SEQ ID NO 544; 164pp; English.
XX
CC The invention relates to a kit for diagnosing and treating T-cell
CC associated diseases which comprises a panel of nucleic acid primers
CC specifically priming and allowing amplification of each Vbeta gene,
CC VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant
CC rejection and diagnosing and treating T-cell associated diseases
CC including autoimmune diseases, degenerative nervous system diseases,
CC graft versus host disease, hypersensitivity diseases, infectious diseases
CC and neoplastic diseases. Autoimmune diseases include Addison's disease,

```
CC   atrophic gastritis. Degenerative nervous system diseases include multiple
CC   sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
CC   I hypersensitivities such as contact with allergens that lead to
CC   allergies, Type II hypersensitivities such as those present in
CC   Goodpasture's syndrome and Type IV hypersensitivities such as those
CC   manifested in leprosy. Infectious diseases include viral infections
CC   caused by viruses such as HIV, fungal infections such as those caused by
CC   the yeast genus Candida, parasitic infections such as those caused by
CC   schistosomes, filaria and bacterial infections such as those caused by
CC   Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
CC   such as leukaemias, lymphomas and cancers such as cancer of the brain,
CC   breast. The present sequence represents a Vbeta gene repeat sequence.

PT   New nucleic acids that interact, and optionally cleave, target sequences,
PT   used to treat cancer.
XX
PS   Claim 77; Page 79; 148pp; English.
XX
CC   The present invention describes nucleic acids (A) that interact stably
CC   with a target sequence and contain at least one phosphoro(di)thioate
CC   link, having endonuclease activity. (A), and more generally any catalytic
CC   nucleic acid (A') that modulates expression of the oestrogen receptor
CC   gene, are used to treat cancer (particularly of breast or endometrium),
CC   in vivo or by transforming cells ex vivo and implanting treated cells, or
CC   for other conditions associated with levels of oestrogen receptor.
CC   Because of the high selectivity for targeted RNA, (A) can also be used to
CC   correlate inhibition of gene expression with alterations in phenotype,
CC   particularly for identification of therapeutic targets, and as research
CC   reagents (for RNA, in the same way that restriction endonucleases are
CC   used with DNA). The combination of modifications in (A) improves
CC   resistance to nucleases, binding affinity and/or activity. AAA23503 to
CC   AAA24747 represent oestrogen receptor hammerhead ribozyme sequences, and
CC   AAA24748 to AAA25992 represent their corresponding target sequences.
CC   AAA25993 to AAA26105 represent oestrogen receptor hairpin ribozyme
CC   sequences, and AAA26107 to AAA26218 represent their corresponding target
CC   sequences. AAA26219 to AAA26271 represent other ribozyme sequences and
CC   antisense oligonucleotides used in the exemplification of the present
CC   invention

XX
CC   The present invention describes nucleic acids (A) that interact stably
CC   with a target sequence and contain at least one phosphoro(di)thioate
CC   link, having endonuclease activity. (A), and more generally any catalytic
CC   nucleic acid (A') that modulates expression of the oestrogen receptor
CC   gene, are used to treat cancer (particularly of breast or endometrium),
CC   in vivo or by transforming cells ex vivo and implanting treated cells, or
CC   for other conditions associated with levels of oestrogen receptor.
CC   Because of the high selectivity for targeted RNA, (A) can also be used to
CC   correlate inhibition of gene expression with alterations in phenotype,
CC   particularly for identification of therapeutic targets, and as research
CC   reagents (for RNA, in the same way that restriction endonucleases are
CC   used with DNA). The combination of modifications in (A) improves
CC   resistance to nucleases, binding affinity and/or activity. AAA23503 to

XX
CC   The invention relates to the human pollinosis-associated gene 373 which
CC   exhibits significantly reduced expression in the T-cells of individuals
CC   with high cedar pollen-specific IgE (immunoglobulin E) levels. The gene
CC   was isolated from T-cells from individuals allergic to cedar pollen using
CC   the differential display method. The invention also relates also relates
CC   to the protein encoded by pollinosis gene 373; expression constructs and
CC   host cells comprising pollinosis-associated gene 373 nucleic acids;
CC   pollinosis-associated gene 373 primers and probes; antibodies against the
CC   protein encoded by the gene; methods of detection of pollinosis-
CC   associated gene 373 nucleic acids; and a method of diagnosis of allergic
CC   diseases via the detection of pollinosis-associated gene 373 nucleic
CC   acids. The invention additionally encompasses methods of screening drug
CC   candidates for the treatment of allergic disease by measuring the
CC   expression of pollinosis-associated gene 373 in pollen antigen-stimulated
CC   T-cells in the presence of a test compound relative to a control.
CC   Pollinosis-associated gene 373 is useful in the diagnosis of allergic
CC   diseases and in the screening of drug candidates for the treatment of
CC   such diseases. The present sequence represents a PCR primer used in the
CC   isolation of human pollinosis-associated gene 373 cDNA

CC The invention relates to the human pollinosis-associated gene 513 which
CC exhibits significantly reduced expression in the T-cells of individuals
CC with high cedar pollen-specific IgE (immunoglobulin E) levels. The gene
CC was isolated from T-cells from individuals allergic to cedar pollen using
CC the differential display method. The invention also relates to methods of
CC detection of pollinosis-associated gene 513 nucleic acids; a method of
CC diagnosis of allergic diseases via the detection of pollinosis-associated
CC gene 513 nucleic acids; and methods of screening drug candidates for the
CC treatment of allergic disease by measuring the expression of pollinosis-
CC associated gene 513 in pollen antigen-stimulated T-cells in the presence
CC of a test compound relative to a control. Pollinosis-associated gene 513
CC is useful in the diagnosis of allergic diseases and in the screening of
CC drug candidates for the treatment of such diseases. The present sequence
CC represents a PCR primer used in the isolation of human pollinosis-
CC associated gene 513 cDNA

CC   The present invention describes the human pollinosis-associated gene 465
CC   which has a nucleic acid sequence of 3442 base pairs (bp), given in
CC   (AAC92291), that undergoes significantly low expression in subjects after
CC   pollen scattering, and is useful in the diagnosis of allergic diseases
CC   and screening candidate compounds for remedies capable of regulating the
CC   response of T cells to the stimulus by an antigen. The gene is useful in
CC   the diagnosis of allergic diseases and screening candidate compounds for
CC   remedies capable of regulating the response of T cells to the stimulus by
CC   an antigen. The present sequence represents a PCR primer which is used in
CC   an example from the present invention

CC   The present invention describes the human pollinosis-associated gene 465
CC   which has a nucleic acid sequence of 3442 base pairs (bp), given in
CC   (AAC92291), that undergoes significantly low expression in subjects after
CC   pollen scattering, and is useful in the diagnosis of allergic diseases
CC   and screening candidate compounds for remedies capable of regulating the
CC   response of T cells to the stimulus by an antigen. The gene is useful in
CC   the diagnosis of allergic diseases and screening candidate compounds for
CC   remedies capable of regulating the response of T cells to the stimulus by
CC   an antigen. The present sequence represents a PCR primer which is used in
CC   an example from the present invention

XX
CC The invention relates to the human pollinosis-associated gene 787 which
CC exhibits significantly reduced expression in the T-cells of individuals
CC after the pollen-scattering season, relative to expression levels in T-
CC cells before the pollen-scattering season. The gene was isolated from T-
CC cells from individuals allergic to pollen using the differential display
CC method. The invention also relates to pollinosis-associated gene 787
CC primers and probes; methods of detection of pollinosis-associated gene
CC 787 nucleic acids; and a method of diagnosis of allergic diseases via the
CC detection of pollinosis-associated gene 787 nucleic acids. The invention
CC additionally encompasses a method of screening drug candidates for the
CC treatment of allergic disease by measuring the expression of pollinosis-
CC associated gene 787 in pollen antigen-stimulated T-cells in the presence
CC of a test compound relative to a control. Pollinosis- associated gene 787
CC is useful in the diagnosis of allergic diseases and in the screening of
CC drug candidates for the treatment of such diseases. The present sequence
CC represents a PCR primer used in the isolation of human pollinosis-
CC associated gene 787 cDNA

CC The invention relates to a method for examining allergic diseases
CC comprises determining the expression level of a gene containing, the
CC human cDNA appearing as ABK49633 which has homology with
CC acetyltransferases in the eosinophils of a patient and comparing the
CC expression level with that in the eosinophils of a healthy individual
CC (i.e. differential display). Also included are methods of screening for
CC candidate compounds which affect the expression level of the gene or the
CC activity of the protein encoded by the gene (including related proteins
CC and mutants), the use of probes based on the gene sequence in the
CC examination of allergic diseases, the use of reporter constructs in the
CC screening of candidate compounds, a vector containing a the transcription
CC -controlling region of the gene, cells transformed with the vector, an
CC antibody against the protein and a model animal for allergic diseases
CC which is a transgenic non-human vertebrate with lowering of expression
CC intensity of the gene in eosinophils. The method is examining allergic
CC diseases particularly atopic dermatitis which is also applicable in
CC screening candidate compounds for remedies. Such method can be performed
CC in high throughput, at low cost. The present sequence is a differential
CC display PCR primer for the cDNA encoding the human acetyltransferase-like
CC protein 20-90-05

XX
CC   The present invention relates to novel human zinc finger-containing
CC   proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is
CC   encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2,
CC   MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome
CC   15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy,
CC   or in manufacturing a medicament for treating or preventing a disorder
CC   associated with decreased or increased expression or activity of MDZ3,
CC   MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic
CC   acids and proteins are also useful for diagnosing or monitoring a disease
CC   caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic
CC   acids can also be used as probes to detect and characterize gross
CC   alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are
CC   useful in constructing microarrays for measuring gene expression. The
CC   proteins are useful as therapeutic agents for gene therapy or as
CC   vaccines. The present sequence was used to illustrate the invention.

CC   The invention relates to the isolation of 6327 nucleotide sequences,
CC   fragments of at least 15 consecutive nucleotides of these nucleotides, a
CC   sequence having at least 80% identity, after optimal alignment, with the
CC   nucleotides, a sequence that hybridizes under stringent conditions with
CC   the nucleotides, or the complement, or corresponding RNA, of the
CC   nucleotides. The nucleotides are used as probes or primers for detecting,
CC   identifying, quantifying and/or amplifying nucleic acids, as in vitro
CC   sense and antisense sequences, of nucleotides involved in tumour
CC   suppression or reversion, apoptosis and or viral resistance, to produce
CC   recombinant polypeptides, and to prepare transgenic animals, as
CC   experimental models. The nucleotides (also vectors containing them and
CC   cells containing the vectors), the encoded polypeptides and antibodies
CC   (Ab) against the polypeptide are useful for prevention and/or treatment
CC   of viral infections or diseases characterized by development of tumours
CC   or cell degeneration (e.g. Alzheimer's disease or schizophrenia).
CC   Analysis of the expression of the nucleotides can be used for diagnosis
CC   and/or prognosis of these diseases. The nucleotides and polypeptides can
CC   also be used to screen for their specific interactive molecules,
CC   potentially useful for treating diseases associated with abnormal
CC   expression of the nucleotides.

PT Examining allergic diseases, such as atopic dermatitis, comprises
PT comparing the expression levels of gene B1799 in T cells in a patient and
PT a healthy individual.
XX
PS Example 1; SEQ ID NO 5; 87pp; Japanese.
XX
CC This invention relates to a novel method for screening and examining
CC allergic diseases by the use of B1799 as the indicator gene.
CC Specifically, it comprises determining the expression level of this
CC indicator gene in a biological sample obtained from the patient, and
CC identifying differential expression (increased expression of B1799) in
CC comparison to that observed in a healthy individual. The present
CC invention describes the B1799 protein as antiallergic, antiinflammatory
CC and dermatological. As such, through the use of gene therapy, this method
CC can be used to treat allergic diseases particularly atopic dermatitis.
CC Furthermore, it is useful for determining a diagnosis that is convenient

```
CC   and non-invasive, and is also applicable in high throughput screening to
CC   identify candidate compounds for additional remedies. This
CC   oligonucleotide sequence is the DNA oligo (SeqID 5) related to the human
CC   B1799 gene of the invention.

PT   information about known nucleotide sequences to a specific sequence in a
PT   target fragment and the information about the specific sequence to
PT   extract a predicted gene.
XX
PS   Disclosure; SEQ ID NO 3; 28pp; English.
XX
CC   The invention relates to novel gene prediction methods. The novel methods
CC   comprise searching a gene database and utilising the information about
CC   the size of a known nucleotide sequence to a specific sequence in a
CC   target fragment and using the information about the specific sequence to
CC   extract a predicted gene. The methods are used for identifying novel and
CC   useful genes. The novel gene prediction methods make it possible to
CC   predict a gene contained in a DNA fragment obtained as a result of gene
CC   expression analysis effectively in a simple and easy manner. The methods
CC   make it possible to predict and identify a target fragment gene rapidly,
CC   and efficiency of genetic analysis is markedly improved. This
CC   polynucleotide sequence represents a primer used in the exemplification
CC   of the invention.

PT   with tumors and cell degeneration, also related polypeptides, antibodies
PT   and transfected cells.
XX
PS   Disclosure; SEQ ID NO 1401; 30pp; French.
XX
CC   This invention relates to novel isolated nucleic acid sequences involved
CC   in the phenomena of tumour suppression, tumour reversion, apoptosis
CC   and/or resistance to viruses. The invention may be useful for the
CC   development of compounds with a cytostatic, virucide, neuroprotective,
CC   nootropic or neuroleptic activity. The DNA sequences may be useful as
CC   probes and primers for detecting, indentifying, quantifying and/or
CC   amplifying nucleic acid, for example as one component of a gene chip, in
CC   vitro as antisense reagents and for production of recombinant
CC   polypeptides. The invention may therefore be useful for preparation of
CC   pharmaceuticals for prevention and/or treatment of viral diseases that
CC   are characterised by development of tumours or cell degeneration,
CC   specifically cancer but also Alzheimer's disease and schizophrenia. The
CC   present sequence is that of a nucleic acid sequence of the invention.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO

PT Examining allergic diseases e.g. atopic dermatitis by differential
PT display based on gene expression of NOR-1 receptor protein, also
PT applicable in screening compounds for treatment of allergic diseases.
XX
PS Example 1; SEQ ID NO 3; 155pp; Japanese.
XX
CC This invention relates to a novel method for examining allergic diseases
CC that comprises comparing the expression levels of a gene encoding the NOR
CC -1 receptor protein between patients and healthy individuals.
CC Specifically, the NOR-1 gene, also referred to as MINOR, is expressed in
CC the specialist white blood cells known as eosinophils and is involved in
CC mediating an allergic reaction. The present invention describes a
CC differential display method that can identify the expression level of
CC this gene in order to identify its usefulness in diagnosing allergic
CC diseases such as atopic dermatitis. Furthermore, compositions can also be
CC used to screen compounds for the treatment of allergic diseases.
CC Accordingly, they exhibit various activities including antiallergic,
CC antiinflammatory and dermatological. This oligonucleotide sequence is a
CC PCR primer used to amplify human NOR-1 DNA in an exemplification of the
CC invention.

PT   New oligonucleotides, useful for treating allergy or asthma, viral and
PT   bacterial infections, and cancer, e.g. biliary tract cancer, breast
PT   cancer, cervical cancer.
XX
PS   Example; SEQ ID NO 12; 104pp; English.
XX
CC   The invention relates to a class of CpG immunostimulatory
CC   oligonucleotides containing a 5'TCG motif or a CG at or the 5' end that
CC   are useful for stimulating an immune response. Oligonucleotides and
CC   compositions of the invention are useful for treating allergy or asthma,
CC   viral and bacterial infections and cancer e.g. biliary tract cancer,
CC   breast cancer, cervical cancer, choriocarcinoma, colon cancer,
CC   endometrial cancer, gastric cancer, lymphomas, intraepithelial neoplasms,
CC   liver cancer, lung cancer (e.g. small cell and non-small cell), melanoma,
CC   neuroblastomas, ovarian cancer, pancreatic cancer, prostate cancer,
CC   rectal cancer, sarcomas, thyroid cancer, renal cancer, bone cancer, brain
CC   and CNS cancer, connective tissue cancer, oesophageal cancer, eye cancer,
CC   Hodgkin's lymphoma, larynx cancer, oral cavity cancer, skin cancer,
CC   testicular cancer, as well as other carcinomas and sarcomas. The
CC   invention is also useful in gene therapy. The present sequence is a CpG
CC   immunostimulatory oligonucleotide.

PT   New DNA encoding protein having juvenile-hormone acid transmethylase
PT   activity, useful for screening for a compound controlling the expression
PT   level of juvenile-hormone acid transmethylase DNA.
XX
PS   Example 1; SEQ ID NO 11; 118pp; Japanese.
XX
CC   The invention relates to a DNA (I) encoding a protein (II) having
CC   juvenile-hormone acid transmethylase activity selected from the DNA from
CC   silkworm (Bombyx mori), Drosophila melanogaster, mosquito (Anopheles
CC   gambiae), Spodoptera litura and Helicoverpa armigera, their encoded
CC   proteins (S2), DNAs (D2) that hybridize under stringent conditions with
```

```
CC   the nucleic acids or an amino acid sequence (S3) comprising any one of
CC   (S2) in which one or more amino acids are substituted, deleted, inserted
CC   and/or added. (I) is useful for screening a compound that controls the
CC   expression level of (I), and as a controlling agent of molting and
CC   transformation, reproductive, diapause, blastogenesis, action,
CC   polymorphism or lifetime of arthropod. (II) is useful for screening a
CC   compound having binding affinity with respect to (II), which involves
CC   contacting test compound with (II), detecting the binding of (II) with
CC   test compound, and selecting the compound that binds with (II). (II) is
CC   useful for screening a compound that controls the activity of (II), which
CC   involves contacting test compound with (II), measuring the activity of
CC   (II), and selecting the compound that decreases or increases the activity
CC   of (II), based on comparison of the activity of (II) in absence of test
CC   compound. (II) is useful for manufacturing activated juvenile hormone.
CC   This sequence corresponds to a PCR primer used to amplify and isolate the
CC   transmethylase cDNA from the silkworm Bombyx mori.

PT   DNA fragment coding for Papillomavirus antigenic proteins - and derived
PT   immunogen, vaccine and antibody.
XX
PS   Claim 6; Page 16; 25pp; French.
XX
CC   The inventors claim DNA fragments capable of expressing, in a host, a
CC   prod. contg. at least one antigenic determinant of papillomavirus (PV),
CC   (see AAN30170-N30173). Also claimed are immunogens consisting of at least
CC   one peptide sequence coded for by the DNA fragments (see AAP30310-
CC   P30313), vaccines contg. the immunogens and antibodies raised from them.
CC   The vaccines are useful in human and veterinary medicine and the
CC   antibodies are useful as diagnostic reagents. The DNA fragments are most
CC   esp. derived from the L1 region of human PV type 1a

PT   Functionalized nanocrystal carrying polynucleotide, used for detecting
PT   target analyte, forms dendrimers with complementary nanocrystals to
PT   amplify the fluorescent signal.
XX
PS   Example 3; Page 69; 72pp; English.
XX
CC   The present invention relates to functionalised nanocrystals for use in
CC   nonisotopic detection systems for biomolecules e.g. nucleic acids,
CC   proteins, lipids or drugs. The nanocrystals have polynucleotide strands
CC   attached to their surfaces with one end of the polynucleotide extending
CC   outwardly from the nanocrystal. The present sequence is one such
CC   polynucleotide. These nanocrystals are used with a second series of
CC   nanocrystals, which have polynucleotides complementary to the first
CC   polynucleotides, so that the respective complementary strands hybridise
CC   to each other and form a dendrimer. This dendrimer produces a signal
CC   which can then be detected e.g. fluorescence. The present sequence is
CC   composed mainly of Thymine bases. This sequence may therefore be used
CC   with a polynucleotide composed mainly of Adenine bases (AAA58385)

PT   New KIS protein, an isomaltulose synthase for conversion of sucrose into
PT   isomaltulose.
XX
PS   Example 3; Fig 7; 82pp; English.
XX
CC   The present invention relates to the KIS protein, a novel isomaltulose (6
CC   -o-alpha-D-glucopyranosyl-D-fructofuranose) synthase. The KIS enzyme
CC   converts sucrose into isomaltulose. It is useful for transformation into
CC   transgenic plants to produce plants which are capable of converting
CC   sucrose into isomaltulose. Isomaltulose is a reducing sugar with physical
CC   properties and taste very similar to sucrose. The present sequence is
CC   Klebsiella singaporensis isomaltulose synthase (KIS) protein AT-rich
CC   sucrose responsive region DNA

XX
PS   Example 3; SEQ ID NO 163; 164pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of a mitogen-activated protein kinase
CC   (MAPK) genes by RNA interference. Also described: (1) a method for
CC   modulating expression of MAPK genes in cells, tissue explants or
```

CC organisms by introduction of siNA; (2) kits for in vitro or in vivo
CC delivery of siNA; (3) conjugates and/or complexes of siNA; and (4)
CC vectors that express siNA and cells containing these vectors. MAPK siNAs
CC have cytostatic, anorectic, antidiabetic, antiinflammatory,
CC antiasthmatic, immunosuppressive, antibacterial, antirheumatic,
CC antiarthritic, antipsoriatic and gastrointestinal activities. The MAPK
CC siNAs can be used to modulate the expression of MAPK genes, in cells,
CC tissue explants or organisms, e.g. for treating obesity; diabetes types I
CC and II; a wide range of tumours, and inflammatory diseases (asthma,
CC septic shock, rheumatoid arthritis, psoriasis and inflammatory bowel
CC disease). They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents a MAPK siNA which is used
CC in the exemplification of the present invention.

XX
PT Interference RNA agent useful for treating dyslipidemias, coronary artery
PT disease, diabetes, cancer or neurological disease, comprises sense
PT sequence and antisense sequence which has specific modifications.
XX
PS Example 5; SEQ ID NO 6180; 378pp; English.
XX
CC The invention describes a RNA interference (iRNA) agent (I) comprising a
CC sense sequence and an antisense sequence, where the sense sequences have
CC one or more asymmetrical 2'-O alkyl modifications, the antisense
CC sequences have one or more asymmetrical phosphorothioate modifications
CC and the antisense sequence targets a human gene sequence. Also described
CC are: a pharmaceutical preparation comprising (I); reducing (M1) apoB-100
CC levels or glucose-6-phosphatase levels in a subject; producing (I);
CC stabilising (I), involves selecting a sequence with activity and
CC introducing one or more asymmetrical modification in the sequence, where
CC the modification decreases nuclease sensitivity while not decreasing its
CC activity; a kit comprising (I) and instruction for its use; and a device
CC that can be dispense or administer a composition comprising (I). (I) is
CC useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (M1)
CC is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.
CC The subject is suffering from a disorder characterised by elevated or
CC otherwise unwanted expression of apoB-100, elevated or otherwise unwanted
CC levels of cholesterol, and/or disregulation of lipid metabolism. The
CC disorder is chosen from the HDL/LDL cholesterol imbalance,
CC dyslipidaemias, hypercholestorolaemia, statin-resistant
CC hypercholesterolaemia, coronary artery disease (CAD), coronary heart
CC disease (CHD) and atherosclerosis. (I) is administered to a subject to
CC inhibit hepatic glucose production or for treating glucose-metabolism-
CC related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
CC treating the diseases as mentioned above, cancer (e.g. breast, colon or
CC lung cancer), neurological disease (e.g., Huntington disease or
CC spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
CC represents a hepatitis C virus (HCV) antisense oligonucleotide that can
CC be used to control HCV gene expression.

PT   New oligonucleotides complementary to RR or SecA genes - useful to
PT   inhibit growth of microorganisms.
XX
PS   Disclosure; Page 22; 103pp; English.
XX
CC   This invention describes novel antisense oligonucleotides (AAX38301-
CC   X38552) which are nuclease resistant, and comprises about 3-50
CC   nucleotides complementary to the ribonucleotide reductase gene or the
CC   secA gene of a microorganism. The antisense oligonucleotides are used to
CC   treat mammalian pathological conditions mediated by microorganisms. The
CC   oligonucleotides are particularly useful as antimicrobial agents in crop
CC   protection

PT   New BAP28 polynucleotides and polypeptides overexpressed in prostate
PT   cancer cells for diagnosing prostate tumors, e.g. by hybridization or
PT   polymerase chain reaction assays.
XX
PS   Example; Page 347; 349pp; English.
XX
CC   The invention is directed to BAP28 polypeptides, BAP28 polynucleotide
CC   sequences and regulatory region located at the 3' and 5' ends of the
CC   BAP28 coding region. The BAP28 polypeptides can be expressed by standard
CC   recombinant methodology. BAP28 polynucleotides and polypeptides have been
CC   found to be over expressed in prostate tumour cells, therefore levels of
CC   BAP28 expression and/or activity may be assayed (e.g. by polymerase chain
CC   reaction (PCR)) to diagnose patient suffering from or susceptible to
CC   prostate cancer. Antibodies specific for the BAP28 polypeptides are
CC   useful as diagnostic reagents. Biallelic markers of the BAP28 gene are
CC   useful in genetic analysis. Sequences AAF83934-963 represent primers for
CC   the BAP28 gene and PCTA-1 gene (the coding strand of PCTA-1 gene is on
CC   the opposite of the coding strand of BAP28)

PT   New antisense compounds capable of modulating expression of caspase 8 for
PT   the diagnoses, prophylaxis and treatment of diseases associated with
PT   expression of caspase 8, e.g. inflammation and tumor formation.
XX
PS   Example 15; Col 43-44; 56pp; English.
XX
CC   The invention relates to antisense compounds which inhibit the expression
CC   of human caspase 8. The antisense compound is useful for diagnosing and
CC   treating diseases associated with the expression of caspase 8 and for
CC   prophylaxis e.g. to prevent or delay infection, inflammation or tumour
CC   formation, and as a research reagent. The present sequence is an
CC   antisense compound targetted to human caspase 8 mRNA

PT   Diagnosing hepatitis B virus (HBV) infection stages and determining the
PT   risk for hepatocellular carcinoma, comprises identifying full length HBV
PT   transcripts and truncated HBV transcripts in a serum sample.
XX
PS   Example 1; Page 6; 25pp; English.
XX
CC   The invention relates to diagnosis of hepatitis B virus (HBV) infection
CC   stages comprising identification of full length HBV transcripts (I) and
CC   truncated HBV transcripts (II) in a serum sample, where the ratio of I:II
CC   is indicative of a particular infection stage. The method is useful for
CC   diagnosing HBV infection stages and determining the risk for developing
CC   hepatocellular carcinoma. The present sequence is that of a HBV
CC   diagnostic PCR primer, useful for the invention

PT   Novel compound targeted to a nucleic acid molecule encoding fibroblast
PT   growth factor receptor 3, useful for inhibiting the expression of the
PT   receptor and for treating an animal having cancer or developmental
PT   disorder.
XX
PS   Example 15; Page 79; 120pp; English.
XX
CC   The invention relates to antisense compounds targetted to a nucleic acid
CC   molecule encoding fibroblast growth factor (FGF) receptor 3 (also known
CC   as FGFR-3, ACH, JTK4 and CEK2) to inhibit its expression. Antisense
CC   compounds of the invention are useful for treating diseases or conditions
CC   associated with FGFR-3 such as developmental disorders or
CC   hyperproliferative disorders, especially cancer of colorectal, bladder,
CC   bone, lung, cervical, breast or skin. They are useful as research
CC   reagents, therapeutics, prophylaxis, kits and diagnostics, and as tools
CC   in differential and/or combinatorial analyses to elucidate expression
CC   patterns of a portion of the genes expressed within cells and tissues.
CC   They are also useful in antisense therapy. The present sequence is an
CC   antisense oligonucleotide targetted to human FGFR-3

PT   New compounds, particularly antisense oligonucleotides targeted to a
PT   nucleic acid encoding caspase 8, useful for treating a disease/condition
PT   associated with caspase 8, such as hyperproliferative or autoimmune
PT   disorders.
XX
PS   Example 15; SEQ ID NO 55; 59pp; English.
XX
CC   The invention relates to a compound 8-30 nucleobases in length targeted
CC   to, and which specifically hybridises with a nucleic acid molecule
CC   encoding caspase 8 (a protein involved in apoptosis), and inhibits the
CC   expression of caspase 8, i.e. an antisense oligonucleotide. Also included
CC   are a compound 8-30 nucleobases in length that specifically hybridises
CC   with at least an 8-nucleobase portion of an active site on a nucleic acid
CC   molecule encoding caspase 8, a composition comprising the compound and a
CC   carrier or diluent, inhibiting the expression of caspase 8 in cells or
CC   tissues (by contacting the cells or tissues with the compound so that
CC   expression of caspase 8 is inhibited) and treating an animal having a
CC   disease or condition associated with caspase 8 by administering to the
CC   animal a therapeutic or prophylactic amount of the compound so that
CC   expression of caspase 8 is inhibited. The compound, composition and
CC   methods are useful for treating a disease or condition associated with
CC   caspase 8, such as hyperproliferative, haematopoietic or autoimmune
CC   disorder, viral infection such as AIDS, neurological disorders (e.g.
CC   Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis,
CC   retinitis pigmentosa), blood cell disorders and cancer. They are also
CC   useful in research and diagnostics for modulating the expression of
CC   interleukin 8. The present sequence is a caspase-8 targeting antisense
CC   oligonucleotide of the invention.

PT Pharmaceutical composition for treating asthma, has antisense
PT oligonucleotide containing less percentage of adenosine, targeted to
PT nucleic acids associated with lung airway or lung dysfunction, and
PT bronchodilating agent.
XX
PS Claim 15; SEQ ID NO 3860; 763pp; English.
XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to
CC thymidines present in the target RNA serves to prevent the breakdown of
CC the oligonucleotides into products that free adenosine into the system
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC prevent any unwanted effects due to it

PT Pharmaceutical composition for treating asthma, has antisense
PT oligonucleotide containing less percentage of adenosine, targeted to
PT nucleic acids associated with lung airway or lung dysfunction, and
PT bronchodilating agent.
XX
PS Claim 15; SEQ ID NO 4180; 763pp; English.
XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to

```
CC   thymidines present in the target RNA serves to prevent the breakdown of
CC   the oligonucleotides into products that free adenosine into the system
CC   e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC   prevent any unwanted effects due to it

XX
CC   The present invention relates to an antisense compound targeted to a
CC   nucleic acid molecule encoding Nav1.3, where the antisense compound
CC   specifically hybridizes with and inhibits the expression of Nav1.3. The
```

CC compound and composition are useful for treating a disease or condition
CC associated with Nav1.3, e.g. pain including but not limited to
CC neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain,
CC diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain,
CC pain from burns, migraine headache, cluster headache, mild-to-moderate
CC headache; seizure disorder such as childhood seizure disorder, including
CC but not limited to neonatal or infantile epilepsy; or ataxia. The present
CC sequence represents a chimeric phosphorothioate oligonucleotide with
CC 2'MOE wings and a deoxy gap. Used during the antisense inhibition of
CC human Nav1.3 expression, the oligonucleotides are designed to target
CC different regions of the human Nav1.3 RNA.

XX
CC The invention relates to an immunostimulatory nucleic acid molecule
CC comprising an internal pyrimidine-purine (YZ) dinucleotide and chimeric
CC backbone, where one internal YZ dinucleotide has a phosphodiester(-like)
CC internucleotide linkage, where optionally each additional internal YZ
CC dinucleotide has a phosphodiester(-like) or stabilised internucleotide
CC linkage, where other internucleotide linkages are stabilised. The
CC oligonucleotide is useful in stimulating or modulating an immune
CC response. The medicament shifts the immune response to a Th1 biased
CC response from a Th2 biased response. The oligonucleotide is also useful
CC in the manufacture of a medicament for treating asthma, allergy, cancer,
CC infectious disease, autoimmune disease, airway remodeling or chronic
CC obstructive pulmonary disease or in treating a subject who is a smoker or
CC who is free of symptoms of asthma. The oligonucleotide is useful in
CC inducing cytokine expression, e.g. IL-6 (interleukin-6), TNFalpha (tumour
CC necrosis factor alpha), IFNalpha (interferon-alpha), IFNgamma (interferon

```
CC   -gamma) and IP-10 (interferon inducible protein). The oligonucleotide is
CC   also useful in treating and preventing infections caused by viruses,
CC   bacteria and parasites. The present sequence represents an
CC   immunostimulatory nucleic acid.

CC   The invention describes a new antisense compound, having a sequence
CC   comprising 8-30 bp targeted to a nucleic acid encoding endothelial
CC   specific molecule-1 (ESM-1), that specifically hybridises with the
CC   nucleic acid ESM-1 and inhibits its expression. Also described are: a
CC   composition; inhibiting the expression of ESM-1 in cells or tissues; and
CC   treating an animal having a disease or condition associated with ESM-1.
CC   The compound is useful for preparing a composition for treating diabetes,
CC   cancer, ischaemia or reperfusion injury, or angiogenic, immunological,
CC   cardiovascular or neurological disorder. This sequence represents an
CC   antisense oligonucleotide that can be used to modulate expression of
CC   endothelial specific molecule-1 (ESM-1).

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 268; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   Modified Tn5 transposase construct used in novel system for in vitro
PT   transposition - used to, e.g. create absolute defective mutants, provide
PT   selective markers and to facilitate insertion of specialised DNA
PT   sequences into target DNA.
XX
PS   Example; Page 21; 73pp; English.
XX
CC   This is the transposon 5 (Tn5) wild type inside end (IE) sequence. The
CC   invention provides a genetic construct that contains a nucleotide
CC   sequence encoding a modified Tn5 transposase enzyme that has both greater
CC   avidity for Tn5 OE repeats and is less likely to assume an inactive
```

CC multimeric form than a wild type Tn5 transposase and a transposable DNA
CC sequence flanked at its 5' and 3' ends by an 18 or 19 base pair flanking
CC DNA sequence comprising nucleotide A at position 10, T at 11 and A at 12.
CC The modified Tn5 transposase and the transposable DNA which is a DNA
CC donor molecule are used in a system for in vitro transposition. The
CC system and method can be used to create absolute defective mutants, to
CC provide selective markers to target DNA, to provide portable regions of
CC homology to a target DNA, to facilitate insertion of specialised DNA
CC sequences into target DNA, to provide primer binding sites or tags for
CC DNA sequencing , to facilitate production of genetic fusion for gene
CC expression studies and protein domain mapping, as well as to bring
CC together other desired combinations of DNA sequences (combinatorial
CC genetics). The modified Tn5 transposase facilitates in vitro
CC transposition reaction rates of at least about 100-fold higher than can
CC be achieved using wild type transposase (as measure in vivo). In vitro
CC transposition using this system can also use donor DNA and target DNA
CC that is circular or linear. The system also requires no outside high
CC energy source and no other protein other than the modified transposase

PT Making insertional mutations at random or quasi-random positions in
PT cellular nucleic acids in target cells, useful for identifying
PT chromosomal regions involved in expressing or regulating expression of
PT proteins.
XX
PS Example; Fig 3; 25pp; English.
XX
CC This invention describes a novel method (I) for making an insertional
CC mutation at a random or quasi-random position in cellular nucleic acid in
CC a target cell. The invention describes a method (II) for forming a
CC synaptic complex between a Tn5 transposase protein (X) and a
CC polynucleotide (Y) that comprises a pair of nucleotide sequences adapted
CC for operably interacting with the Tn5 transposase to form a synaptic
CC complex and a transposable nucleotide sequence between them, comprising
CC combining (X) and (Y) in vitro under conditions that disfavor
CC polynucleotide strand transfer to form the synaptic complex. Methods for
CC the insertion of exogenous nucleic acids into the nucleic acids of target
CC cells are used to identify chromosomal regions involved in expressing or
CC regulating expression of proteins. The same methods may be used in the
CC development of new therapeutic agents. The transposable polynucleotides
CC used to form synaptic complexes can consist of transposon apart from any
CC flanking sequences. This is advantageous in that it reduces the
CC likelihood of intramolecular transposition and increases the likelihood
CC of transposition into a target genome. Eliminating donor backbone
CC sequences from the polynucleotide simplifies preparation of the
CC transposon sequences to be used in (I). Additionally, the synaptic
CC complex can form under conditions that disfavor non-productive
CC intramolecular transposition events. This is advantageous because all of
CC the synaptic complexes can undergo transposition when combined with
CC cellular DNA. Little, if any, of the nucleic acid in the synaptic
CC complexes is inactive. This sequence represents a novel transposon Tn5

PT   New hairpin and hammerhead ribozyme for inhibiting restenosis, cleaves
PT   RNA encoding a cyclin or cell-cycle dependent kinase other than CDK1,
PT   PCNA and Cyclin B1.
XX
PS   Disclosure; Page 106; 109pp; English.
XX
CC   The present invention relates to a hairpin or hammerhead ribozyme,
CC   designed to cleave RNA encoding a cyclin or cell-cycle dependent kinase
CC   other than cell-cycle dependent kinases CDK1, PCNA and Cyclin B1.
CC   Representative examples of ribozyme recognition sites are given in
CC   AAA82415 to AAA86787. The ribozyme of the invention is useful for
CC   inhibiting restenosis by introduction of the ribozyme into cells. The
CC   ribozyme is resistant to endonuclease activity and hence is efficient in
CC   restenosis treatment

PT   Mutant Tn5 transposase enzymes which have preference for Tn5 inside ends
PT   over Tn5 outside ends useful for in vitro transpositions and in systems
PT   for transposing a transposable DNA sequence in vitro.
XX
PS   Disclosure; Fig 1; 37pp; English.
XX
CC   The invention relates to a mutant Tn5 transposase protein (I) modified
CC   relative to wild-type Tn5 transposase protein, which differs from the
CC   wild-type protein at amino acid positions 58 or 372 and which has a
CC   preference for Tn5 inside ends (IEs) over Tn5 outside ends (OEs). (I) is
CC   useful in a system for transposing a transposable DNA sequence in vitro.
CC   The system comprises (I), a donor DNA molecule comprising a transposable
CC   DNA sequence which is flanked at its 5' and 3' ends by a wild-type
CC   methylated IE sequence and a target DNA molecule into which the
CC   transposable element can transpose. It is also useful in a in vitro
CC   transposition method which involves combining a donor DNA molecule that
CC   comprises a transposable DNA sequence of interest being flanked at its 5'
CC   and 3' ends by a wild-type Tn5 IE sequence with a target DNA molecule and
CC   (I), in a reaction buffer at a temperature below physiological
CC   temperature until the modified transposase binds to the IE sequences and
CC   then raising the temperature enzyme to catalyse in vitro transposition.
CC   The present sequence represents the nucleotide sequence of Tn5
CC   transposase IE

PT   Transposable element for detecting an antigenic epitope of a pathogen,
PT   comprising 5' and 3' recombining sites, nucleic acid sequences encoding a
PT   selectable marker and major histocompatibility complex (MHC) epitope, and
PT   an insertion end.
XX
PS   Claim 17; Fig 11; 63pp; English.
XX
CC   The invention relates to a novel transposable element comprising DNA
CC   encoding a selectable marker (e.g., antibiotic resistance) located
CC   between a 5' recombining site and a 3' recombining site (e.g., loxP
CC   sites); DNA encoding an MHC (major histocompatibility complex) epitope
CC   either 5' of the 5' recombining site or 3' of the 3' recombining site;
CC   and insertion ends comprising an inverted repeat sequence at the 5' and
CC   3' ends of the transposable element sufficient for integration of the
CC   transposable element. The transposable elements of the invention are able
CC   to introduce in-frame insertions throughout the chromosome of an
CC   intracellular bacterial pathogen. This system "tags" the bacterial gene
CC   and resulting protein, allowing the identification of proteins secreted
CC   across the membranes of the eukaryotic cell infected by the bacterium. In
CC   one embodiment, the transposable elements contain an antibiotic
CC   resistance cassette, two minimal loxP recombination sites, an MHC class I
CC   or class II epitope, and flanking insertion ends. A transposase, such as
CC   the Cre recombinase protein, is expressed in trans from a plasmid, or can
CC   be included in the transposable element. The Cre recombinase loops out
CC   the intervening sequences containing the antibiotic resistance cassette.
CC   When the transposable element inserts within a gene, the resolved
CC   insertion places the MHC class I or class II epitope in frame with the
CC   gene. The transposable elements of the invention are useful for detecting
CC   an antigenic epitope of an intracellular bacterial pathogen, such as
CC   Salmonella sp., Mycobacterium tuberculosis and Listeria monocytogenes.
CC   Certain embodiments of the technology, termed "disseminated insertions of
CC   class-I epitopes" (DICE-I; DICE-II for class II epitopes) allow the rapid
CC   and accurate identification of proteins involved in bacterial
CC   pathogenesis so that such proteins can be used as vaccine and drug
CC   targets. Carrier vaccines may be generated by infecting bacteria with a
CC   transposable element of the invention which additionally comprises an
CC   antigen associated with a disease, preferably cancer or a viral or
CC   bacterial disease, operably linked to the MHC epitope DNA of the
CC   transposable element. The present sequence represents a transposon Tn5
CC   IS50R I end (5' insertion end) claimed for use in a transposable element
CC   of the invention

PT   Treating proliferative skin or eye diseases and scarring, using ribozymes
PT   that cleave RNA encoding cytokines involved in inflammation, matrix
PT   metalloproteinases, growth factors and cell-cycle dependent kinases.
XX
PS   Example 1; Page 356; 408pp; English.
XX
CC   The present invention describes a method for treating a proliferative
CC   skin or eye disease and scarring. The method involves administering a
CC   ribozyme (I) which cleaves RNA encoding a cytokine involved in
CC   inflammation, matrix metalloproteinase (MMP), cyclin, cell-cycle
CC   dependent kinase, growth factor or a reductase, or administering a
CC   nucleic acid molecule (II) comprising a promoter operably linked to a
CC   nucleic acid segment encoding (I). (I) can have antipsoriatic,
CC   dermatological, cytostatic, antiseborrheic, antidiabetic, antisickling,
CC   ophthalmological, vulnerary, keratolytic and virucide activities, and
CC   cleaves RNA encoding cytokine involved in inflammation. (I) can be used
CC   in gene therapy. (I) and (II) are useful for treating proliferative skin
CC   diseases such as psoriasis, atopic dermatitis, actinic keratosis,
CC   squamous or basal cell carcinoma and viral or seborrheic wart. They can
CC   also be used for treating proliferative eye diseases such as diabetic
CC   retinopathy, vitreoretinopathy, sickle cell retinopathy, retinopathy of
CC   prematurity and retinal detachment, and for treating and preventing
CC   scarring such as keloid, adhesion and hypertrophic or hypertrophic burn
CC   scar. AAH57577 to AAH62099 represent sequences used in the
CC   exemplification of the present invention

PT   of a polynucleotide in a biological sample comprises detecting a
PT   hybridization complex.
XX
PS   Example 3; Page 105; 454pp; English.
XX
CC   The invention describes a method of predicting, diagnosing or prognosing
CC   a cardiovascular disease by detection of a polynucleotide in a biological
CC   sample comprises hybridising at least one of the polynucleotide to a
CC   nucleic acid material of a biological sample, thus forming a
CC   hybridisation complex, and detecting the hybridisation complex. The
CC   polynucleotides, polypeptides, antisense molecule, antibody and reagent
CC   are useful for preparing compositions for preventing, predicting or
CC   diagnosing, or a medicament for treating a cardiovascular disease, e.g.
CC   arteriosclerosis, ischaemia, angina pectoris, or myocardial infarction.
CC   This sequence represents a primer used to identify genes differentially
CC   regulated in individuals with cardiovascular disease

PT   Novel locked nucleic acid conjugate useful in manufacturing a medicament
PT   for treating or preventing pathogenic infections or cancer, has an
PT   oligonucleotide having locked nucleic acid based on a functional moiety.
XX
PS   Example 5; Page 36; 101pp; English.
XX
CC   The present invention describes a locked nucleic acid (LNA) conjugate (I)
CC   comprising an oligonucleotide having at least one locked nucleic acid
CC   based on a functional moiety. Also described: (1) a complex (II)
CC   comprising (I) and a DNA sequence having a complementary sequence to the
CC   oligonucleotide, and encoding a gene under the control of a promoter; (2)
CC   a pharmaceutical composition (III) comprising (II) and a carrier or
CC   diluent; (3) a device loaded with (III); and (4) an oligonucleotide (IV)
CC   comprising a first region comprising an oligonucleotide sequence having
CC   at least one LNA, and a second region comprising an immunostimulatory
CC   oligonucleotide region containing at least one unmethylated CG di-
CC   nucleotide motif. (I) has cytostatic and antimicrobial activities, and
CC   can be used in gene therapy. (I) and (II) can be used in medicine, and in
CC   the manufacture of a medicament for the treatment or the prevention of
CC   pathogenic infections or cancer. (I) is useful for the preparation of
CC   (III), by hybridising (I) with a plasmid capable of expressing a gene
CC   encoding an antigen or therapeutic protein, and formulating the resulting
CC   complex with a pharmaceutical carrier. The present sequence represents an
CC   oligonucleotide, which is used in an example from the present invention

PT   Integrating nucleic acid into mammalian genome, useful for gene therapy,
PT   comprises delivering a complex between nucleic acid containing a
PT   transposon and a transposase specific for the transposon.
XX
PS   Disclosure; Page 3; 20pp; English.
XX
CC   The invention relates to a method of integrating nucleic acid into the
CC   genome of mammalian cells. The method involves forming an integrator
CC   complex between the nucleic acid containing a transposon and a
CC   transposase specific for the transposon and delivering the integrator
CC   complex to a mammalian cell. The method and composition is useful for
CC   integrating nucleic acid into the genome of mammalian cells, especially
CC   nucleic acids encoding therapeutic proteins for gene therapy. The
CC   transposon may be used to integrate large DNA molecules, up to 10 kb or
CC   larger, into the genome of a mammalian cell. The present sequence is Tn5
CC   transposon element DNA (end binding sequence). This sequence is used to
CC   illustrate the method of the invention

PT   New double-stranded interfering nucleic acid, useful e.g. for treatment
PT   and diagnosis of cancer, downregulates the vascular endothelial growth
PT   factor receptor gene.
XX
PS   Example 3; SEQ ID NO 390; 207pp; English.
XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of the vascular
CC   endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC   siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC   delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

PT   New double-stranded interfering nucleic acid, useful e.g. for treatment
PT   and diagnosis of cancer, downregulates the vascular endothelial growth
PT   factor receptor gene.
XX
PS   Example 3; SEQ ID NO 817; 207pp; English.
XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of the vascular
CC   endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC   siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC   delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

PT   New short interfering nucleic acids, useful e.g. for treatment and
PT   diagnosis of Alzheimer's disease, which down regulates expression of the
PT   beta-secretase gene.
XX
PS   Example 3; SEQ ID NO 325; 144pp; English.
XX
CC   The invention relates to short interfering nucleic acids (siNA) which
CC   downregulate expression of the human beta-secretase (BACE) gene by RNA
CC   interference. The siNAs may or may not comprise ribonucleotides and may
CC   be double or single stranded. They further comprise sense and antisense
CC   regions, or alternatively are assembled from a sense oligonucleotide and
CC   an antisense oligonucleotide. Specifically, the siNAs include short
CC   interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short
CC   hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified,
CC   can contain deoxyribonucleotides, and can be chemically synthesised,
CC   expressed from a vector or enzymatically synthesised. The invention also
CC   relates to kits for the in vitro or in vivo delivery of siNA; conjugates
CC   and/or complexes of siNA; and vectors that express siNA. The siNAs are
CC   used to modulate expression of the BACE gene in cells, tissue explants or
CC   organisms (e.g., by ex vivo gene therapy), or in grafts and transplants
CC   for the treatment of a variety of conditions. They may be used for
CC   treating Alzheimer's disease or other degenerative conditions such as
CC   dementia and stroke/cardiovascular accident. The siNAs are also useful
CC   for drug screening, diagnosis, therapeutic target identification and
CC   validation, genetic engineering, pharmacogenomics, studying gene
CC   function, and gene mapping (e.g., of single nucleotide polymorphisms).
CC   The present sequence represents the upper strand of a human BACE-targeted
CC   double-stranded siNA, which is identical to the BACE transcript target
CC   sequence.

PT   New mammalian melanoma-inhibitory activity-2 proteins and encoding
PT   nucleic acids, are useful for treating cancer, fibrosis and cirrhosis of
PT   the liver.
XX
PS   Claim 18; Page 30; 54pp; German.
XX
CC   The present invention provides the protein and coding sequences of human
CC   and murine MIA-2 (melanoma-inhibiting activity-2) proteins. The sequences
CC   are useful in antifibrotic therapy, also for treating cirrhosis and
CC   fibrosis of the liver. The same material, also antibodies and aptamers
CC   directed against an epitope of the proteins and probes that hybridize to
CC   the coding sequences, can be used to treat liver tumours and metastases.
CC   The antibodies, aptamers and probes are also useful for diagnosis,
CC   particularly of liver damage and the acute phase of an inflammatory or
CC   infective disease (e.g. Crohn's disease, gastroenteritis, rheumatoid
CC   arthritis, spondylitis, mycocarditis). The sequences are also used to
CC   prepare organ cultures from hepatocytes, and these cultures are useful
CC   for purifying blood from patients with inadequate liver function. The
CC   present sequence is a PCR primer used to isolate the human coding
CC   sequence of the invention.

XX
CC The invention relates to a composition for enhancing transposase mediated
CC integration of a transposon into a target nucleic acid, comprising an
CC integrator complex and an enhancing reagent. The invention also relates
CC to a method of integrating a nucleic acid into a target nucleic acid,
CC involving making a transposon, forming an integrator complex, combining
CC the integrator complex and a cationic enhancing reagent together in
CC solution, and incubating the composition with a target nucleic acid,
CC where the transposase integrates the transposon into the target nucleic
CC acid. The transposase is a hyperactive mutant Tn5 transposase. The Tn5
CC transposase is flanked by elements chosen from Tn5 outer elements, Tn5
CC inner elements and Tn5 mosaic elements. The enhancing reagent is chosen
CC from transfection reagents, polycations, cationic polymers and cationic
CC lipids. The enhancing reagent comprises both cationic proteins and
CC cationic lipids. The composition and the method are useful for providing
CC random insertional mutagenesis, in which integration of a transposon into
CC a target nucleic acid inserts a molecular tag or disrupts a target
CC sequence, where the integration of a molecular tag facilitates cloning,
CC sequencing or identification by providing a detectable marker, and the
CC integration into a coding region disrupts gene function and facilitates
CC study of a gene. The composition is useful for identifying enhancer
CC elements, for sequencing DNA and for integrating large DNA fragments with
CC known ends into a target nucleic acid such as a plasmid, an artificial
CC chromosome or a viral vector. The composition is also useful for
CC integrating e.g. therapeutic genes, siRNA genes, reporter genes, marker
CC or tag sequences, genes containing RNA polymerase III promoters or
CC modified U1 snRNA genes. This sequence represents a transposon Tn5 inner
CC element used in the scope of the invention.

PT A triple-helix comprising a double helical nucleic acid (DHNA) and an
PT oligonucleotide which binds in parallel and antiparallel orientation,
PT respectively, for targetting sequences on alternate strands of DHNA to
PT control gene expression.
XX
PS Example 7; Col 41; 108pp; English.
XX
CC The present invention relates to methods and oligonucleotides for forming
CC a triple-helix comprising a double helical nucleic acid comprising first
CC and second substantially complementary strands, and an oligonucleotide
CC bound to a purine-rich target sequence within the double helical nucleic
CC acid, where the oligonucleotide binds in a parallel and antiparallel
CC orientation, respectively, to target sequences on alternate strands of
CC the double helical nucleic acid. The method has therapeutic applications,
CC where gene expression is controlled by selective triple-helix formation
CC within expression regulatory sequences of a target gene. The
CC oligonucleotides can be used to form triple-helices, and are useful to
CC detect the presence or absence of specific sequences within genomic DNA
CC for diagnostic and therapeutic purposes. The oligonucleotides can be
CC selected to specifically bind to pathogenic double-stranded DNA including
CC specific sequences required by pathogenic bacteria or viruses for
CC replication or virulence, reducing their pathogenicity. Alternatively,
CC the oligonucleotide can be chosen to target a unique sequence of the
CC pathogen which is not found in the genome of pathogen's host. The
CC oligonucleotides can be used in cancer treatment by way of triple-helix
CC suppression of specific oncogenes including those of endogenous or viral
CC origin. Such therapeutic oligonucleotides are capable of forming triple-
CC helices with such sequences in cancerous cells containing the activated
CC oncogene, so preferentially killing or repressing the cancer causing
CC cell. The present sequence represents an oligonucleotide used in the
CC methods of the present invention

XX
CC   The present invention describes nucleic acid molecules which modulate the
CC   synthesis, expression and/or stability of a mRNA encoding 1 or more
CC   receptors of vascular endothelial growth factor (VEGF). A patient
CC   (preferably human) having a condition associated with the level of the
CC   fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing
CC   receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour
CC   angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be
CC   treated by administering the nucleic acid molecule or the expression
CC   vector to the patient. AAX67275 to AAX75752 represent specific examples
CC   of nucleic acid molecules from the present invention

PT   New nucleic acids that interact, and optionally cleave, target sequences,
PT   used to treat cancer.
XX
PS   Claim 77; Page 79; 148pp; English.
XX
CC   The present invention describes nucleic acids (A) that interact stably
CC   with a target sequence and contain at least one phosphoro(di)thioate
CC   link, having endonuclease activity. (A), and more generally any catalytic
CC   nucleic acid (A') that modulates expression of the oestrogen receptor
CC   gene, are used to treat cancer (particularly of breast or endometrium),
CC   in vivo or by transforming cells ex vivo and implanting treated cells, or
CC   for other conditions associated with levels of oestrogen receptor.
CC   Because of the high selectivity for targeted RNA, (A) can also be used to
CC   correlate inhibition of gene expression with alterations in phenotype,
CC   particularly for identification of therapeutic targets, and as research
CC   reagents (for RNA, in the same way that restriction endonucleases are
CC   used with DNA). The combination of modifications in (A) improves
CC   resistance to nucleases, binding affinity and/or activity. AAA23503 to
CC   AAA24747 represent oestrogen receptor hammerhead ribozyme sequences, and
CC   AAA24748 to AAA25992 represent their corresponding target sequences.
CC   AAA25993 to AAA26105 represent oestrogen receptor hairpin ribozyme
CC   sequences, and AAA26107 to AAA26218 represent their corresponding target
CC   sequences. AAA26219 to AAA26271 represent other ribozyme sequences and
CC   antisense oligonucleotides used in the exemplification of the present
CC   invention

PT   New isolated nucleic acid, useful for treating viral diseases associated
PT   with tumors and cell degeneration, also related polypeptides, antibodies
PT   and transfected cells.
XX
PS   Disclosure; Page 121; 720pp; French.
XX
CC   The invention relates to a novel isolated 17 mer nucleic acid sequence,
CC   given in the specification, a sequence containing at least 15 consecutive
CC   nucleotides from the 17 mer sequence, a sequence with, after optimal
CC   alignment, at least 80 % identity to the 17 mer sequence, a sequence that
CC   hybridizes to them under highly stringent conditions, or the complement
CC   of any of them, or the corresponding RNA. The novel isolated nucleic
CC   acids of the invention are useful as probes and primers for detecting,
CC   identifying, quantifying and/or amplifying a nucleic acid, e.g. as one
CC   component of a gene chip, in vitro as (anti)sense reagents, and for
CC   production of recombinant polypeptides. Any of the nucleic acids,
CC   polypeptides, vectors containing the nucleic acids, cells containing the
CC   vector or antibodies directed against the polypeptides are useful for
CC   preparation of pharmaceuticals for prevention and/or treatment of viral
CC   diseases that are characterised by development of tumours or cell
CC   degeneration, specifically cancer but also Alzheimer's disease and
```

```
CC   schizophrenia. Analysis of the expression of the 17 mer nucleic acids in
CC   patient samples is useful for diagnosis and/or prognosis of these
CC   diseases. The polypeptides can also be used to generate antibodies, and
CC   both the polypeptide and antibodies are useful as components of protein
CC   chips. The nucleic acid sequences of the invention can be used in gene
CC   therapy. This polynucleotide sequence represents a tumour suppression
CC   related human fukutin oligonucleotide of the invention

PT   New zinc finger-containing proteins and nucleic acids, useful in
PT   manufacturing a medicament for treating or preventing a disorder
PT   associated with decreased or increased expression or activity of MDZ3,
PT   MDZ4, MDZ7 or MDZ12, e.g. cancer.
XX
PS   Example 8; SEQ ID NO 5260; 103pp; English.
XX
CC   The present invention relates to novel human zinc finger-containing
CC   proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is
CC   encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2,
CC   MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome
CC   15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy,
CC   or in manufacturing a medicament for treating or preventing a disorder
CC   associated with decreased or increased expression or activity of MDZ3,
CC   MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic
CC   acids and proteins are also useful for diagnosing or monitoring a disease
CC   caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic
CC   acids can also be used as probes to detect and characterize gross
CC   alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are
CC   useful in constructing microarrays for measuring gene expression. The
CC   proteins are useful as therapeutic agents for gene therapy or as
CC   vaccines. The present sequence was used to illustrate the invention.

PT   Novel short interfering RNA and enzymatic nucleic acid useful for
PT   treating cancer, modulates the expression of a nucleic acid encoding
PT   HER2, K-Ras, H-Ras, N-Ras, and human deficiency virus sequences.
XX
PS   Claim 58; Page 109; 185pp; English.
XX
CC   The invention relates to a novel short interfering RNA (siRNA) nucleic
CC   acid molecule or an enzymatic nucleic acid molecule, that modulates
CC   expression of a nucleic acid molecule encoding HER2, K-Ras, H-Ras, N-Ras,
CC   human immunodeficiency virus (HIV) or a component of HIV. The nucleic
CC   acid molecule of the invention has cytostatic, anti-HIV, and anti-
CC   rheumatic activity. The nucleic acid molecules are useful for reducing
CC   HER2, K-Ras, H-Ras, and HIV activity in a cell. The nucleic acids are
CC   also useful for treating breast, ovarian, colorectal, lung, prostate,
CC   bladder, or pancreatic cancer, and HIV infection, and AIDS. The sequences
CC   shown in ABZ59889 - ABZ62216, ABZ64544 - ABZ65531, ABZ66520 - ABZ66524,
CC   ABZ66530 - ABZ66585 represent substrate/target sequences for the human
CC   ribozymes of the invention

PT   New oligomers contg. modified bases - which form a triplex with G-C
PT   doublet in a DNA duplex, for treating and diagnosing HIV, hepatitis,
PT   herpes malignancy and inflammation.
XX
PS   Claim 12; Page 72; 77pp; English.
XX
CC   The synthetic oligomer is capable of forming a triplex at physiological
CC   pH with a purine rich target sequence by coupling into the major groove
CC   of the duplex. The specific target sequence of this oligomer is the human
CC   tumour necrosis factor receptor mRNA beginning at nucleotide 2354 contg.
CC   a purine rich sequence concd. on one strand of the duplex. The oligomer,
CC   and others like it are useful in diagnosis and therapy of diseases
CC   characterised by specific DNA duplex targets, e.g. HPV, HER, HIV,
CC   hepatitis B, herpes, malignant tumours and inflammation. The triple
CC   helices form under mild conditions thus assays may be carried out without
CC   subjecting the test specimen to harsh conditions. See also AAQ25452-25501
CC   and AAQ30226-448. (Updated on 25-MAR-2003 to correct PN field.) (Updated

PT New oligomers contg. modified bases - which form a triplex with G-C
PT doublet in a DNA duplex, for treating and diagnosing HIV, hepatitis,
PT herpes malignancy and inflammation.
XX
PS Claim 11; Page 64; 77pp; English.
XX
CC The sequence depicts a HUMNFR (tumour necrosis factor receptor) mRNA
CC sequence beginning at nucleotide 2354. The sequence is a viral duplex
CC sequence contg. a purine-rich region concentrated on one chain of the
CC duplex. The sequence may be prepd. by standard DNA synthesis. The HUMNFR
CC duplex sequence is used as a target for novel oligomers which are capable
CC of forming a triplex at physiological pH by coupling into the major
CC groove of the DNA duplex. Three such oligomers TNFR 941-32 are capable of
CC forming a triplex with this sequence. The oligomers are used in the
CC treatment of inflammation. Similar oligomers may be used to target viral
CC DNA duplexes specific for HIV, herpes and other viruses. The triple
CC helices form under mild conditions thus assays may be carried out without
CC subjecting the test specimen to harsh conditions. The oligomer is able to
CC inhibit gene expression, as verified by in vitro systems. See also
CC AAQ25452-25500 and AAQ30226-448. (Updated on 25-MAR-2003 to correct PN
CC field.)

PT Recombinant vaccinia virus containing fusion HIB gag gene - for
PT production in host cells of gag protein for use as vaccine.
XX
PS Example 1; Page 64; 84pp; Japanese.
XX
CC AAV35388-V35414 are primers used in a method which results in a
CC recombinant vaccinia virus comprising of a gag gene from a retrovirus
CC such as HIV-1 or HIV-2, fused to a DNA fragment containing an epitope
CC region (30-300 bases in length) of a retroviral gene other than the gag
CC gene. The gag gene may be altered so as to produce a gag protein modified
CC from the natural sequence by the addition, deletion or substitution of at
CC least 1 amino acid residue. The fusion gene is inserted into a region of
CC a vaccinia virus not essential to its propagation, to give a recombinant
CC vaccinia virus vector which is used to transform a host cell (such as
CC HeLa, Vero, VEF, rabbit kidney RK13 or human myeloma TK-143 cells). Upon
CC culturing the host cell produces particulate structures containing the
CC fusion gag protein. The recombinant vaccinia virus or the fusion gag
CC protein particles may be used in the production of vaccines for
CC protecting against infection with retroviruses such as HIV

XX
CC   The invention relates to an analytical method for determining the
CC   nucleotide sequence of nucleic acid analytes, including chemically
CC   modified oligonucleotides. This new method utilises electrospray
CC   ionisation-Fourier transform mass spectrometry. The ions are excited by
CC   sustained off-resonance excitation with single shot excitation, and the
CC   target fragmented by collisionally activated dissociation by a neutral
CC   gas, e.g. carbon dioxide. Alternatively, the excitation and dissociation
CC   can be nozzle skimmer dissociation. The method is used in molecular
CC   biology and biomedical applications. The method, utilising electrospray
CC   ionisation-Fourier transform ion cyclotron resonance mass spectrometry,
CC   is extremely rapid and acts directly on the oligonucleotide. The method
CC   is effective for a variety of nucleic acid analytes, particularly
CC   chemically modified oligonucleotides which have not previously been
CC   successfully sequenced. The present sequence represents a
CC   phosphorothioate oligodeoxynucleotide

XX
CC   This antisense oligonucleotide is nuclease resistant and can be used in
CC   the treatment of animals, including humans, having a bacterial infection.
CC   The treatment comprises administration of such nuclease resistant
CC   oligonucleotides, targeted to a nucleic acid or protein of the bacterium,
CC   and formulated with a carrier. A compound comprising this nuclease
CC   resistant oligonucleotide can be covalently linked to an antibiotic. The
CC   method is used to treat infections by a wide variety of Gram-positive and
CC   Gram-negative, or acid-fast, bacteria, in human and veterinary medicine.
CC   The methods are particularly used in immuno-compromised individuals (e.g.
CC   patients with acquired immunodeficiency syndrome or those receiving
CC   chemotherapy or radiation therapy), optionally in combination with, or
CC   fused to, antiviral or other antimicrobial oligonucleotides. Apart from
CC   therapeutic use, the oligonucleotides can be used to control bacteria in
CC   laboratory cultures, foods, beverages and industrial processes. The
CC   oligonucleotides are specific for bacteria, without affecting metabolism
CC   in mammalian cells. They may also activate RNase H and have a general,
CC   non-specific immune-stimulating effect. The oligonucleotides can be
CC   administered orally, intranasally, rectally, topically or by injection,
CC   optionally coupled to an agent (e.g. carbohydrate or polyamine) that
CC   enhances cellular uptake

PT SAG: Sensitive to Apoptosis Gene and related proteins, useful for
PT promoting cell growth and protecting cells against apoptosis.
XX
PS Example 1; Page 14; 84pp; English.
XX
CC This primer was used for reverse transcription of RNA isolated from mouse
CC tumour lines L-RT101 (epidermal tumour cell line) and H-Tx (spontaneously
CC transformed liver line). It was also used as the reverse primer in PCR
CC amplification of the resulting cDNA. Primers P1 and P2 (see AAX87333)
CC reproducibly detected differential expression of a gene between 1,10-
CC phenanthroline (OP)-treated and OP-nontreated L-RT101 and H-Tx cells. An
CC OP-inducible clone was used as a probe to isolate a full-length clone
CC (see AAX87313) corresponding to the mouse sensitive to apoptosis gene
CC (SAG). SAG is a redox-sensitive, haem-binding protein domain that
CC promotes cell growth, protects cells from apoptosis, scavenges oxygen
CC radicals and can be used for the reversion of a tumour phenotype

PT Novel cyclic nucleotide phosphodiesterase polypeptide and polynucleotide
PT for diagnosis, prevention, and treatment of cancer, immune and neuronal
PT disorders.
XX
PS Example V; Col 36; 65pp; English.
XX
CC The invention relates to proteins (AAB11935-B11938) which are members of
CC a novel family of human cyclic nucleotide phosphodiesterases, and to
CC cDNAs encoding them (AAA72001-A72004). ESTs (expressed sequence tags)
CC encoding fragments of PDE8A/PDE8A(E) (AAB11935, AAB11937) and
CC PDE8B/PDE8B(E) (AAB11936, AAB11938) were isolated from promonocyte and
CC atrial tissue cDNA libraries respectively, and extended via PCR using
CC lambda-gt10 human testis or stomach cDNA libraries. Members of the PDE8
CC family have chemical and structural to rat PDE4A (GI1705952). Cyclic
CC nucleotide phosphodiesterases degrade cyclic nucleotides to their
CC corresponding monophosphates, thereby regulating the intracellular
CC concentrations of cyclic nucleotides and their effects on signal
CC transduction. PDE8 proteins (AAB11935-B11938) and nucleotides (AAA72001-
CC A72004) may be used in the diagnosis, prevention and treatment of cancers

```
CC   (such as those of the bone marrow, brain or breast), immune disorders
CC   (e.g., allergies, systemic lupus erythematosus, rheumatoid arthritis) and
CC   neuronal disorders (e.g., Alzheimer's disease, Parkinson's disease and
CC   Huntington's disease). Such conditions may be treated using a PDE8
CC   antagonist which should have the effect of increasing intracellular
CC   levels of cAMP, which in turn inhibits some immune and inflammatory
CC   responses. The PDE8 proteins can be used to raise antibodies which may be
CC   used therapeutically and in diagnosis. The proteins can also be used to
CC   screen potential modulators of PDE8 activity. PDE8 nucleic acids may be
CC   used in antisense therapy, and as a source of probes and primers for use
CC   in diagnostic techniques. Sequences AAA72005-A72010 represent PCR primers
CC   used in an exemplification to extend ESTs encoding PDE8A and PDE8A(E)

PT   Determining the concentration of a target nucleic acid, useful e.g. for
PT   detecting genetic mutations, comprises using a fluorescently labeled
PT   probe in which emission is reduced by binding to the target nucleic acid.
XX
PS   Example 5; Page 21; 55pp; English.
XX
CC   The invention relates to the determination of the concentration of a
CC   nucleic acid target, using a fluorescently labeled probe which produces
CC   reduced fluorescence emission when hybridised to the target nucleic acid.
CC   The method comprises measuring the reduction in emission caused by
CC   hybridisation. The new method is particularly used to quantify target
CC   nucleic acids by a real-time polymerase chain reaction, e.g. for
CC   quantifying microbial cells in co-cultures or symbiotic systems, for
CC   detecting gene mutations or polymorphisms, and for analysing melting
CC   curves of target nucleic acids to determine a Tm value. Methods of the
CC   invention allow target nucleic acids to be quantified quickly, easily and
CC   accurately. Particularly there is no need to remove unbound probe, and no
CC   materials are introduced that inhibit amplification by Taq polymerase (so
CC   conventional PCR conditions can be used). The specificity of PCR is kept
CC   high (amplification of primer dimers is delayed), and the limit of
CC   quantitation is reduced. Complex probes are not needed, and amplification
CC   can be monitored in real time. The working graph for data analysis
CC   (automatically generated by a computer) has a higher correlation
CC   coefficient than conventional graphs so more accurate quantitation is
CC   possible. The current sequence represents a nucleic acid probe of the
CC   invention that was used for investigating the base selectivity of a
CC   target nucleic acid

CC   quantifying microbial cells in co-cultures or symbiotic systems, for
CC   detecting gene mutations or polymorphisms, and for analysing melting
CC   curves of target nucleic acids to determine a Tm value. Methods of the
CC   invention allow target nucleic acids to be quantified quickly, easily and
CC   accurately. Particularly there is no need to remove unbound probe, and no
CC   materials are introduced that inhibit amplification by Taq polymerase (so
CC   conventional PCR conditions can be used). The specificity of PCR is kept
```

```
CC   high (amplification of primer dimers is delayed), and the limit of
CC   quantitation is reduced. Complex probes are not needed, and amplification
CC   can be monitored in real time. The working graph for data analysis
CC   (automatically generated by a computer) has a higher correlation
CC   coefficient than conventional graphs so more accurate quantitation is
CC   possible. The current sequence represents a nucleic acid probe of the
CC   invention that was used for investigating the base selectivity of a
CC   target nucleic acid

XX
PT   Amplifying a nucleotide sequence for genome sequences and genetic
PT   analysis, involves utilizing interlaced nesting primers.
XX
PS   Example 1; Page 17; 50pp; English.
XX
CC   The invention relates to a novel method of amplification of a nucleotide
CC   sequence using interlaced nesting primers. The method may be used for
CC   sequencing, particularly for genome sequencing, and is referred to as
CC   "amplification and sequencing by interlaced nesting" (ASIN). The method
CC   involves amplifying a nucleotide sequence having at least one region of
CC   known sequence comprising two adjacent known regions (R1 and R2). A first
CC   primer comprising, in the 5' to 3' direction, a 5' tag sequence, a
CC   degenerate sequence corresponding to R1 and a sequence complementary to
CC   R2 is used in a first amplification reaction. The amplification product
CC   is then used as a template in a second amplification reaction with a
CC   second primer comprising, in the 5' to 3' direction, a sequence which
CC   hybridises to the complementary strand of the 5' tag sequence and a
CC   sequence complementary to R1 of the nucleotide sequence of interest, to
CC   generate a second amplification product. The second amplification product
CC   may then be sequenced. The method of amplification used in the method is
CC   preferably PCR. The invention also relates to primers, primer sets,
CC   primer libraries and kits for use in the method of the invention, and
CC   products of the method of the invention. The method, primers, and kits
CC   are useful for primer walking, and are useful for amplifying and
CC   sequencing nucleotide sequences of interest, particularly genomes. The
CC   present sequence represents an Escherichia coli fruR PCR primer used in
CC   an exemplification of the invention

PT   Providing mRNA profile, by generating two independent patterns
PT   characteristic of sample mRNA population, analyzing patterns, comparing
PT   gene expression by cell types under varied conditions, and identifying
PT   genes.
XX
PS   Disclosure; Fig 1; 67pp; English.
XX
CC   The present invention relates to a method for providing a profile of mRNA
CC   molecules present in a sample. The method comprises generating two
CC   independent patterns characteristic of the population of mRNA molecules
CC   expressed in the sample and analysing the patterns using a combinatorial
CC   algorithm, comparing gene expression by different or same cell types
CC   under different conditions, and identifying genes having a role in
CC   various cellular processes. The method is useful for the analysis and
CC   identification of transcribed genes, and fingerprinting. The method can
CC   be used to identify genes which play a role in determining various
CC   cellular processes, including susceptibility to external factors,
CC   development, and disease. The present sequence for a PCR primer is used
CC   in the production of a single pattern characteristic of a sample,
CC   employing a Type II restriction enzyme (i.e. HaeII) in the methods of the
CC   present invention

PT   Determining polyadenylation sites within transcribed gene sequences
PT   present in a sample comprises assigning to gene fragments gene candidates
PT   within a database by comparing signals in the dataset with the database.
XX
PS   Example; Fig 2; 81pp; English.
XX
CC   The invention relates to determining the presence of and/or identifying a
CC   polyadenylation site within a sequence of a transcribed gene or variants
CC   present in a sample. The method involves assigning to gene fragments gene
CC   candidates within a database by comparing signals in the dataset with the
CC   database, the database comprising data representing mRNAs with known
CC   polyA sites and/or 'virtual genes' representing a possible
CC   polyadenylation site within an actual gene. The method is useful for
CC   determining the presence of and/or identifying a polyadenylation site or
CC   alternative polyadenylation sites within a sequence of a transcribed gene
CC   or sequences of transcribed gene variants present or potentially present
CC   in a sample, in identifying gene features, particularly in identifying
CC   differences between sequence variants that occur in a population of
CC   nucleic acid molecules, especially in identifying or discovering polyA
CC   site usage or determining polyA site usage in a nucleic acid sample, and
CC   gene variants arising from alternative polyA sites. The present sequence
CC   represents a double stranded product DNA fragment

PT Novel DNA sequences expressed and repressed during winter dormancy in the
PT apical buds of tea bushes, useful for obtaining important information on
PT gene regulation, and for synthesizing unique proteins for raising
PT antibodies.
XX
PS Example 3; Page 12; 0pp; English.
XX
CC The invention relates to a method for cloning novel DNA sequences
CC expressed and repressed during winter dormancy in the apical buds of
CC Camellia sinensis L. (O.) Kuntze (tea) bushes or a tree species. The
CC novel DNA sequences are useful for obtaining important information on
CC gene regulation, for modulating winter dormancy in plants after
CC transferring these genes using Agrobacterium-mediated transformation and
CC Biallistic-mediated transformation. They are also useful in modulating
CC winter dormancy in plants such as tea, plums, cherries, peaches, Taxus,
CC apples, pears, vines, grapes, olives, Kiwi fruit, figs, morus,
CC strawberries, raspberries, loganberries, almonds, cranberries,
CC blackberries, walnuts and chestnuts after transferring these genes suing
CC the transformation methods cited. The obtained important information on
CC gene regulation can be exploited to regulate gene expression in
CC transgene. The novel cDNAs and genomic DNAs are useful for synthesising
CC unique proteins for raising antibodies. The antibodies can be used as
CC probes to look for similar proteins in other plants, animal and/or
CC microbial systems or the like. These are also useful as probes to look
CC for expression of these sequences of nucleotides in other plants, animal
CC and/or microbial systems. The present sequence is a PCR primer used for
CC amplifying non-dormant (ND) and dormant (D) apical buds of tea. This
CC sequence is used to illustrate the method of the invention

PS Example 5; SEQ ID NO 6; 57pp; English.
XX
CC The present invention relates to identifying the new genes differentially
CC expressed in tea plants under water-deficient stress conditions,
CC comprising: isolating total mRNA from the plant growing both under normal
CC and drought conditions; reverse transcribing the mRNAs to obtain
CC corresponding cDNA; sequencing the cDNA; and identifying differentially
CC expressed genes using the cDNA sequences; and introducing water-deficient
CC stress tolerance in plant systems using the new genes, comprising
CC transferring the genes into the plant systems. The genes are useful in
CC method M2 for introducing water stress tolerance into plants (especially
CC tea plants). The method is useful for identifying the genes
CC differentially expressed in tea plants. The genes are also useful in
CC developing probes to identify drought tolerant plants. The present
CC sequence represents a primer of the invention.

PT   New genes from drought stress tolerant tea plant, useful for producing
PT   drought-tolerant transgenic plants and for identifying drought-tolerant
PT   plants.
XX
PS   Example 5; SEQ ID NO 7; 57pp; English.
XX
CC   The present invention relates to identifying the new genes differentially
CC   expressed in tea plants under water-deficient stress conditions,
CC   comprising: isolating total mRNA from the plant growing both under normal
CC   and drought conditions; reverse transcribing the mRNAs to obtain
CC   corresponding cDNA; sequencing the cDNA; and identifying differentially
CC   expressed genes using the cDNA sequences; and introducing water-deficient
CC   stress tolerance in plant systems using the new genes, comprising
CC   transferring the genes into the plant systems. The genes are useful in
CC   method M2 for introducing water stress tolerance into plants (especially
CC   tea plants). The method is useful for identifying the genes
CC   differentially expressed in tea plants. The genes are also useful in
CC   developing probes to identify drought tolerant plants. The present
CC   sequence represents a primer of the invention.

PT   Novel isolated antibody that specifically binds human cyclic nucleotide
PT   phosphodiesterases 8 useful for treating prostate cancer and type I
PT   diabetes.
XX
PS   Example 1; SEQ ID NO 18; 75pp; English.
XX
CC   The invention relates to an isolated antibody that specifically binds a
CC   human cyclic nucleotide phosphodiesterases 8 (PDE8s). The antibody is
CC   useful for detecting differential expression of a protein in a prostate,
CC   pancreas or lung sample. An antibody composition is useful for assessing
CC   efficacy of a small drug molecule and for assessing toxicity of a
CC   compound. The antibody and antibody compulsions are useful for treating
CC   prostate cancer. Antibody compositions are useful for delivering an agent
CC   to the prostate. The antibody is useful for treating neoplastic, immune
CC   and neuronal disorders e.g. lung tumours and type I diabetes. The present
CC   sequence represents cDNA encoding the human PDE8A specific outer PCR
CC   primer.

PT   New PDE8 polypeptides and encoding polynucleotides, useful for
PT   diagnosing, preventing, and treating disorders associated with an
PT   abnormal expression or activity of PDE8, such as neuromuscular,
PT   immunological, and cancer.
XX
PS   Example 5; SEQ ID NO 10; 71pp; English.
XX
CC   The invention relates to cyclic phosphodiesterase (PDE) polynucleotide
CC   and polypeptide. The invention is useful in gene therapy. The polypeptide
CC   or its fragments, and the polynucleotide encoding the polypeptide are
CC   useful in diagnosing, preventing, and treating disorders associated with
CC   an abnormal expression or activity of PDE8, such as neurodegenerative
CC   disorders (e.g. Parkinson's disease, Alzheimer's disease, dementia,
CC   depression, schizophrenia, Huntington's disease), cancers (e.g.
CC   leukaemia, cervical or breast cancers), and immunological disorders (e.g.
CC   scleroderma, diabetes, atopic dermatitis, Grave's disease, ulcerative
CC   colitis, viral, bacterial, parasitic, protozoal infections, systemic
CC   lupus erythematosus, allergies). PDE8 or its fragments may also be used
CC   in screening for compounds that specifically bind to and modulate the
CC   activity of PDE8. The polynucleotides can be used to create humanised
CC   animals or transgenic animals to model human disease. The present
CC   sequence is a PCR primer used in the extension of PDE8 cDNA.

PT   Determining common functional alleles in a population - useful in the
PT   diagnosis of disease associated with allelic heterogeneity.
XX
PS   Example 5; Page 42; 78pp; English.
XX
CC   The invention relates to methods of determining a functional allele
CC   profile of a gene in a population. Functional allele profiles comprise
CC   the commonly occurring alleles in a population, and the relative
CC   frequencies at which such alleles of a given gene occur. The methods are
CC   used to identify and determine the frequency of the functional alleles of
CC   genes which display extensive allelic heterogeneity, particularly those
CC   implicated in disease or conditions, such as the BRCA1 gene associated
CC   with breast cancer, CFTR associated with cystic fibrosis, dystrophin
CC   associated with Duchenne muscular dystrophy and Becker muscular
CC   dystrophy, and p53 associated with Li-Fraumeni syndrome. The methods can
CC   also be employed for diseases where allelic and genetic heterogeneity
CC   exist, such as breast cancer, neurofibromatosis, and hereditary non-
CC   polyposis colorectal cancer. Identification of functional alleles is
CC   necessary for identification of mutations which may be implicated in the
CC   disease. Sequences AAX32173-232 represent probes used to detect BRCA2,
CC   PTEN, and BAP1 single nucleotide polymorphisms (SNPs)

PT G-protein coupled receptor (GPCR-x) nucleic acids and polypeptides
PT encoded by them, useful for treating neurological and psychiatric
PT disorders such as severe mental retardation, manic depression and
PT dementia.
XX
PS Example 5; Page 104; 175pp; English.
XX
CC PCR primers AAH42194-95 were used to amplify G-protein coupled receptor
CC (GPCR) cDNA. GPCRs may be used in the prevention, treatment and diagnosis
CC of diseases associated with inappropriate GPCR expression such as thyroid
CC disorders (e.g. thyrotoxicosis, myxedema), renal failure; inflammatory
CC conditions (e.g., Crohn's disease); diseases related to cell
CC differentiation and homeostasis; rheumatoid arthritis; autoimmune
CC disorders; central nervous system (CNS) disorders (e.g., pain including
CC migraine, stroke; psychotic and neurological disorders such as anxiety,
CC mental disorder, manic depression, generalized anxiety disorder, post-
CC traumatic-stress disorder, depression, bipolar disorder, dementia, severe
CC mental retardation; Huntington's disease; degenerative disorders such as
CC Parkinson's, Alzheimer's; infections such as viral infections caused by
CC HIV-1 or HIV-2; metabolic and cardiovascular disease and disorders (e.g.,
CC type 2 diabetes, obesity, anorexia, hypotension, hypertension,
CC thrombosis, myocardial infarction, atherosclerosis); proliferative
CC diseases and cancers and hyperproliferative disorders such as psoriasis,
CC prostate hyperplasia); hormonal disorders (male/female hormonal
CC replacement, polycystic ovarian syndrome)

PT Treating proliferative skin or eye diseases and scarring, using ribozymes
PT that cleave RNA encoding cytokines involved in inflammation, matrix
PT metalloproteinases, growth factors and cell-cycle dependent kinases.
XX
PS Example 1; Page 90; 408pp; English.
XX
CC The present invention describes a method for treating a proliferative
CC skin or eye disease and scarring. The method involves administering a
CC ribozyme (I) which cleaves RNA encoding a cytokine involved in
CC inflammation, matrix metalloproteinase (MMP), cyclin, cell-cycle
CC dependent kinase, growth factor or a reductase, or administering a
CC nucleic acid molecule (II) comprising a promoter operably linked to a
CC nucleic acid segment encoding (I). (I) can have antipsoriatic,
CC dermatological, cytostatic, antiseborrheic, antidiabetic, antisickling,
CC ophthalmological, vulnerary, keratolytic and virucide activities, and
CC cleaves RNA encoding cytokine involved in inflammation. (I) can be used
CC in gene therapy. (I) and (II) are useful for treating proliferative skin
CC diseases such as psoriasis, atopic dermatitis, actinic keratosis,
CC squamous or basal cell carcinoma and viral or seborrheic wart. They can
CC also be used for treating proliferative eye diseases such as diabetic
CC retinopathy, vitreoretinopathy, sickle cell retinopathy, retinopathy of
CC prematurity and retinal detachment, and for treating and preventing
CC scarring such as keloid, adhesion and hypertrophic or hypertrophic burn
CC scar. AAH57577 to AAH62099 represent sequences used in the
CC exemplification of the present invention

PT Detecting polymorphisms in uridine diphosphate glucuronosyltransferase
PT gene promoter, useful for optimizing drug dosages for a patient,
PT comprises determining the presence of five thymidine-adenine repeats in
PT the promoter.
XX
PS Example 6; Col 11; 13pp; English.
XX
CC The invention relates to detecting (M1) polymorphisms in a uridine
CC diphosphate glucuronosyltransferase (UGT) gene promoter by determining
CC the presence of five thymidine-adenine (TA) repeats in the promoter,
CC where the presence of the five TA repeats correlates with increased
CC expression of the gene. The method is used for detecting polymorphisms in
CC a UGT gene promoter, preferably a UGT I (UGT1A1) gene promoter. (M1) is
CC useful for screening individuals for variation in glucuronidation
CC activity, for optimising drug dosages for a patient, where the drugs
CC (e.g. Irinotecan or TAS-103) are glucuronidated by UGT (preferably
CC UGT1A1) and the activity of the drug is effected by its level of
CC glucurodination. The method preferably involves obtaining DNA from an
CC individual, amplifying all or part of a UGT gene promoter (UGT1A1 gene
CC promoter) contained in the DNA and determining the number of TA repeats
CC in the promoter. Thus the DNA being amplified comprises all or part of
CC UGT1A1 promoter. The DNA is amplified by a polymerase chain reaction and
CC the number of TA repeats is determined by gel electrophoresis or by
CC sequencing the amplified DNA. The polymorphism comprises an allele
CC consisting of five TA repeats (TA)5, six TA repeats (TA)6, or seven TA
CC repeats (TA)7. The promoter has any one of the genotypes (TA)5/(TA)5,
CC (TA)5/(TA)6, (TA)5/(TA)7, (TA)5/(TA)8, (TA)6/(TA)8, (TA)7/(TA)8 or
CC (TA)8/(TA)8. (M1) is also useful for predicting an individuals
CC sensitivity to xenobiotics that are glucuronidated by a UGT (preferably
CC UGT1A1) gene product, the method comprising determining the number of TA
CC repeats in a UGT gene promoter, where the number of TA repeats correlates
CC with expression of the UGT gene, and the individuals sensitivity to
CC xenobiotics is effected by glucuronidation activity. The methods
CC preferably involve determining the presence of five, six or seven TA
CC repeats in the promoter. Defects in glucurodination is associated with
CC Gilbert's syndrome (hyperbilirubinaemia) and Crigler-Najjar syndrome. The
CC present sequence is the UGT1A1 promoter (TA)8 repeat region

PT   Identifying and detecting nucleic acids, particularly DNA hybridization
```

PT probes, involves employing chain extending enzymes (e.g. telomerase) to
PT elongate probes to render them readily detectable.
XX
PS Example 1; Page 5; 10pp; English.
XX
CC The present invention describes a method for detecting a nucleic acid
CC probe, which comprises using chain extending enzymes to elongate probes.
CC The method comprises: (a) treating the sample with a chain terminating
CC reagent to prevent polynucleotide chain growth from the nucleic acid in
CC the sample; (b) contacting the sample with the probe containing a
CC terminus capable of elongation by a chain extending enzyme, where the
CC probe hybridises to the nucleic acid in the sample; (c) contacting the
CC sample with a chain extending enzyme and its substrates, which elongates
CC the probe; and (d) detecting the elongated hybridised probe. Also
CC described is a method comprising: (a) treating nucleic acid molecules or
CC modified nucleic acids in a sample with a reagent or reagents that render
CC the nucleic acid chains unextendable by a non-template-dependent enzyme;
CC (b) hybridising the treated molecules with a nucleic acid probe that
CC includes an extendable terminus, under conditions where hybrids form; and
CC (c) treating any hybrids formed with a non-template dependent chain
CC elongating enzyme and its substrates, where any hybridised probe is
CC extended. The method is useful for identifying and detecting nucleic
CC acids, particularly DNA hybridisation probes. The present sequence
CC represents a tailing reaction exemplary primer, which is used in an
CC example from the present invention

PT Determining a functional allele profile of a gene in a population by
PT identifying the nucleotide sequence of a gene of genomic DNA from each of
PT the individuals with a family history of functional alleles of the gene
PT of interest.
XX
PS Example 5; Page 16; 28pp; English.
XX
CC The present invention relates to a method for determining a functional
CC allele profile of a gene in a population. The method comprises
CC identifying the nucleotide sequence of a gene of interest out of genomic
CC DNA from each of a population of individuals identified as having a
CC family history which indicates inheritance of functional alleles of the
CC gene of interest, and rank ordering the frequency of occurrence of each
CC haplotype, where the identity of the alleles containing each haplotype
CC and the determination of their relative frequencies constitutes the
CC functional allele profile of the gene of interest in the population. The
CC method is useful for determining functional allele profiles which are
CC useful in the treatment and diagnosis of diseases, for genetic and
CC pharmacogenetic applications, and for evaluating the degree to which the
CC gene(s) are under selective pressure. The present sequence represents a
CC probe used in the method of the invention.

PS Example 3; SEQ ID NO 1263; 207pp; English.
XX
CC The present invention describes a double-stranded short interfering
CC nucleic acid (siNA) that downregulates expression of the vascular
CC endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC that express siNA; and (5) single-stranded siNA with similar properties.
CC The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC gynaecological activities. The siNA are useful for modulating
CC (downregulating) the expression of VEGFR genes. The siNA are potentially
CC useful for treating a wide range of angiogenesis-associated conditions,
CC particularly cancers, diabetic retinopathy, macular degeneration,
CC neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC drug screening, target identification and validation, genetic
CC engineering, studying gene function, and also for gene mapping (e.g. of
CC single-nucleotide polymorphisms). The present sequence is used in the
CC exemplification of the present invention.

PT Interference RNA agent useful for treating dyslipidemias, coronary artery
PT disease, diabetes, cancer or neurological disease, comprises sense
PT sequence and antisense sequence which has specific modifications.
XX
PS Example 5; SEQ ID NO 6417; 378pp; English.
XX
CC The invention describes a RNA interference (iRNA) agent (I) comprising a
CC sense sequence and an antisense sequence, where the sense sequences have
CC one or more asymmetrical 2'-O alkyl modifications, the antisense
CC sequences have one or more asymmetrical phosphorothioate modifications
CC and the antisense sequence targets a human gene sequence. Also described
CC are: a pharmaceutical preparation comprising (I); reducing (M1) apoB-100
CC levels or glucose-6-phosphatase levels in a subject; producing (I);
CC stabilising (I), involves selecting a sequence with activity and
CC introducing one or more asymmetrical modification in the sequence, where
CC the modification decreases nuclease sensitivity while not decreasing its
CC activity; a kit comprising (I) and instruction for its use; and a device
CC that can be dispense or administer a composition comprising (I). (I) is
CC useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (M1)
CC is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.
CC The subject is suffering from a disorder characterised by elevated or
CC otherwise unwanted expression of apoB-100, elevated or otherwise unwanted
CC levels of cholesterol, and/or disregulation of lipid metabolism. The
CC disorder is chosen from the HDL/LDL cholesterol imbalance,
CC dyslipidaemias, hypercholestorolaemia, statin-resistant
CC hypercholesterolaemia, coronary artery disease (CAD), coronary heart
CC disease (CHD) and atherosclerosis. (I) is administered to a subject to
CC inhibit hepatic glucose production or for treating glucose-metabolism-
CC related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
CC treating the diseases as mentioned above, cancer (e.g. breast, colon or
CC lung cancer), neurological disease (e.g., Huntington disease or
CC spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
CC represents a hepatitis C virus (HCV) antisense oligonucleotide that can
CC be used to control HCV gene expression.

PT Peptides having at least two new nucleotides - useful as primers in RT-
PT PCR.
XX
PS Example 1; Page 12; 19pp; Japanese.
XX
CC This sequence represents a primer of the invention. The invention relates
CC to sequences of at least two nucleotides of formula: (X)m5'-(alpha)n-beta
CC -N3'; or (X)m5'-(gamma)k-delta-N3'; where X = a labelled compound and/or
CC a nucleotide with voluntary sequence; m = 0 or 1; alpha = thymine; n =
CC natural number indicating the repetition of alpha; beta, delta = V or N;
CC V = adenine, guanine or cytosine; N = adenine, guanine, cytosine or
CC thymine; gamma = thymine; k = natural number of 3 or over indicating the
CC repetition of gamma, in which thymine expressed by gamma is composed of
CC 1/3 or less of adenine, guanine and/or cytosine. The new nucleotides are
CC useful as primers for RT-PCR and determination of base sequences. The new
CC sequences allow for reproductive and highly efficient analysis of gene
CC sequences

PT Novel probe sets with common universal linkers at one or both ends (WRAP
PT probes) for gene expression arrays to provide global amplification of
PT probe set and to provide common equivalent signaling regardless of
PT length.
XX
PS Disclosure; Page 88; 97pp; English.
XX
CC The invention relates to a probe set for gene expression arrays to
CC provide common equivalent signalling per probe and global amplification
CC of the set. The probe set has a pool of modified cDNA probes, each probe
CC having a central target specific segment copied from a portion of a
CC single mRNA transcript and a universal linker (a WRAP-Probe) located on
CC one or both terminal ends. The universal linker has reporter binding
CC sites to join common reporters to the probes and primer binding sites to
CC copy and amplify the probe. The probes and reporters are useful in
CC diagnostic or drug discovery assays for a wide range of biomedical
CC samples, including detection of nucleic acids and gene expression
CC profiles in human diagnostics, forensics and genomic analysis. The
CC methods are useful for amplifying and identifying any unknown DNA
CC fragment and also for improving sensitivity with tissue microarrays or
CC RNA arrays. The methods improve the quantification of gene expression and
CC allow highly improved detection of rare transcripts or very small
CC samples. This sequence represents a poly-T primer used in the
CC construction of probe sets

XX
CC   This sequence represents a primer of the invention. The invention relates
CC   to sequences of at least two nucleotides of formula: (X)m5'-(alpha)n-beta
CC   -N3'; or (X)m5'-(gamma)k-delta-N3'; where X = a labelled compound and/or
CC   a nucleotide with voluntary sequence; m = 0 or 1; alpha = thymine; n =
CC   natural number indicating the repetition of alpha; beta, delta = V or N;
CC   V = adenine, guanine or cytosine; N = adenine, guanine, cytosine or
CC   thymine; gamma = thymine; k = natural number of 3 or over indicating the
CC   repetition of gamma, in which thymine expressed by gamma is composed of
CC   1/3 or less of adenine, guanine and/or cytosine. The new nucleotides are
CC   useful as primers for RT-PCR and determination of base sequences. The new
CC   sequences allow for reproductive and highly efficient analysis of gene
CC   sequences

PT   Novel gene cluster which is specifically expressed in tissue or organ
PT   during developmental phase of sea squirt, useful for elucidation of
PT   mechanism of development of tissue or organ of sea squirt.
XX
PS   Disclosure; Page 38; 1846pp; Japanese.
XX
CC   This invention relates to novel genes and the encoded proteins thereof
CC   that are derived from the sea squirt Ciona intestinalis. Specifically, it
CC   refers to those genes that are expressed in the tissues or organs of the
CC   sea squirt during its developmental phase. The present invention
CC   describes the identification of these genes as useful for elucidation of
CC   the mechanism of development and hence for developing regeneration
CC   medicines and gene therapy techniques. Accordingly, they can be used in
CC   the research of various genetic diseases, as well as the analysis of cell
CC   proliferation, differentiation and reproduction. Furthermore, such
CC   compositions can be useful for environmental measurements and water
CC   surveys, particularly for sea water surveys, and also for the preparation
CC   of transformed sea squirt for improving edibility of sea squirt such as
CC   Halocynthia roretzi. This oligonucleotide sequence is a PCR primer used
CC   to amplify sea squirt DNA given in an exemplification of the invention.

PT Detection and characterisation of mRNA by restriction display PCR -
PT comprising synthesis of cDNA, digestion with a restriction endonuclease,
PT ligation to an adaptor DNA and PCR amplification.
XX
PS Disclosure; Page 24; 40pp; English.
XX
CC A method has been improved for detecting and characterising mRNA
CC molecules which includes synthesising a double stranded (ds) cDNA from
CC isolated mRNA, digesting the ds cDNA with a restriction endonuclease to
CC produce cDNA fragments in which at least one end of the cDNA fragments
CC has a sequence capable of hybridising to an adaptor DNA sequence. The
CC improvement comprises: (a) hybridising adaptor DNA sequences to at least
CC one end of the cDNA fragments; (b) ligating the adaptor DNA sequences to
CC the cDNA fragments; (c) amplifying the cDNA fragments having ligated
CC adaptor DNA sequences by a PCR using primers that hybridise to the ends
CC of the cDNA fragments, where the primers have at least one nucleotide at
CC the 3' end that specifically hybridises to a subset of cDNA molecules;
CC and (d) detecting the presence of the resulting amplified cDNA fragments.
CC The present sequence represent a template poly-A tail used in the present
CC specification. The method designate restriction display PCR can be used
CC for characterising cells based on their mRNA content, for representing
CC expressed genes, and for discovery of therapeutics that alter cellular
CC gene expression. The method is also useful for characterising cells of a
CC variety of types and under a variety of physiological conditions. The
CC method is also useful for identifying cells or tissue from particular
CC individuals or species based on the fingerprint obtained from the mRNA
CC content of isolated cells or tissue and comparing it to cells or tissue
CC from a known source

PT Obtaining transgenic plant useful for controlling seed germination and
PT seedling growth comprises transgene comprising a sequence expressing
PT altered levels of an essential hormone.

XX
PS Example 17; Page 262; 267pp; English.
XX
CC The present primer was used to reverse transcribe cDNA encoding a C-20
CC oxidase. The amplifie fragment is used in the method of the invention.
CC The specification describes methods for the inhibition and control of
CC gibberellic acid levels. Gibberellic acid levels may be inhibited or
CC controlled by use of a chimeric expression construct expressing a RNA or
CC protein which suppresses the gibberellin biosynthetic pathway sequence,
CC diverts substrate from the pathway, or degrades pathway substrates or
CC products. The methods uses copalyl diphosphate synthase, 3beta-
CC hydroxylase, 2-oxidase, phytoene synthase, C-20 oxidase, and a
CC 2beta,3beta-hydroxylase polynucleotides to achieve this. The method is
CC used to control seed germination and seedling growth especially to
CC regulate gene products of gibberellin biosynthetic pathway and
CC restoration of normal seed germination, in transgenic plants. The plants
CC produced are gibberellin deficient, and have shortened hypocotyl and/or
CC epicotyl phenotypes compared to normal plants

PT New polynucleotides regulated by fatty lesion development and their
PT encoded polypeptides, useful for preventing, treating or ameliorating
PT atherosclerosis, as well as for immune or hyperproliferative disorders.
XX
PS Example 1; Page 79; 188pp; English.
XX
CC The present invention relates to an isolated nucleic acid regulated by
CC fatty lesion development, which comprises any of 55 polynucleotide
CC sequences from Oryctolagus cuniculus. The polynucleotide, polypeptide or
CC antibody is useful for preventing, treating, modulating or ameliorating a
CC medical condition, particularly atherosclerosis. The invention is used as
CC a marker or detector of nervous system disorder or disease (e.g.
CC Parkinson's disease, Alzheimer's disease, ischaemia, dementia). The
CC invention may also be useful for treating deficiencies or disorders of
CC the immune system (e.g. lymphopaenia, leukocyte adhesion deficiency
CC syndrome or haemoglobinuria, anaemia), hyperproliferative disorders
CC (e.g.Gaucher's disease), infectious disease (e.g. herpes simplex),
CC coagulation disorders, blood platelet disorders and autoimmune disorders
CC (Addison's disease, rheumatoid arthritis, dermatitis, Grave's disease).
CC The polynucleotide sequence is also used in gene therapy. The present
CC sequence is a 3' sequencing primer used in the identification and
CC characterisation of polynucleotides up-regulated by fatty lesion
CC development

PT New neuroleptic-regulated polynucleotides expressed in the central
PT nervous system for diagnosing and treating neuropsychiatric disorders
PT such as schizophrenia, bipolar disorder and addiction-related behavior.
XX
PS Example 1; Page 87; 210pp; English.
XX
CC The present invention describes isolated neuroleptic-regulated nucleic
CC acid molecules. (I) have neuroleptic, antimanic and antidepressant
CC activities, and can be used in gene therapy. (I), polypeptides (II)
CC encoded by (I), or a host cell (III) comprising (I), are useful for
CC preventing, treating, modulating or ameliorating a medical condition such
CC as a neuropsychiatric disorder. (I) are useful as diagnostic agents for
CC diagnosing a pathological condition or susceptibility to a pathological

CC condition such as neuropsychiatric disorder e.g. schizophrenia, a bipolar
CC disorder or addiction-related behaviour. (I) are useful for detecting the
CC presence of a nucleic acid encoding a protein in a mammalian tissue
CC sample. (I) can be used as probes and primers, for chromosome
CC identification, to control gene expression through triple helix formation
CC or antisense DNA or RNA, in gene therapy to treat the above mentioned
CC disorders, identifying individuals from minute biological samples, as an
CC alternative to restriction fragment length polymorphism (RFLP) and as
CC polymorphic markers for forensic purposes. (I) is also useful as
CC molecular weight markers on Southern gels, diagnostic probes for the
CC presence of specific mRNA in a particular cell type, as a probe to
CC subtract-out known sequences in the process of discovering novel
CC polynucleotides, for selecting and making oligomers for attachment to a
CC gene chip or other support, to raise anti-DNA antibodies using DNA
CC immunisation technique, and as an antigen to elicit an immune response.

XX
CC The present sequence represents a primer used to isolate novel mouse
CC microglia and macrophage regulatory gene DST (digital sequence tag)
CC sequences. AAS06401-AAS06590 represent these novel sequences and the
CC primer sequences used to isolate them. The PCR-based total gene
CC expression analysis (TOGA) system is used to examine the expression
CC pattern of molecules corresponding to genes that are regulated in
CC unstimulated microglia, activated microglia, unstimulated macrophage and
CC activated macrophage. The polynucleotides of the invention, the
CC polypeptides encoded by them and antibodies that bind to these
CC polypeptides are useful are useful for the diagnosis, prevention,
CC treatment or amelioration of a medical condition, preferably a
CC neuroinflammatory pathology or a neurodegenerative disease such as
CC Alzheimer's disease, senile dementia, Parkinson's disease, obsessive
CC compulsive disorders, epilepsy, schizophrenia, multiple sclerosis,
CC depression and bipolar manic-depressive disorder. The sequences and
CC methods of the invention can also be used for detecting or treating
CC infectious disorders (e.g. AIDS), hyperproliferative disorders (e.g.
CC cancer), immune disorders (e.g. severe combined immunodeficiency, SCID)
CC autoimmune diseases (e.g. insulin dependent diabetes mellitus),
CC inflammatory disorders (e.g. arthritis). The polynucleotides can be used
CC for gene therapy

PT New polynucleotide useful in gene therapy for preventing, treating
PT modulating or ameliorating a medical condition such as psychoses or a
PT neuro psychiatric disorder e.g. schizophrenia, or a bipolar disorder in a
PT mammal.
XX
PS Example 1; Page 40; 254pp; English.
XX
CC This invention relates to the cDNA sequences of novel isolated
CC polynucleotides associated with psychoses or other neuropsychiatric
CC disorders. The sequences of the invention may act as blockers of D_2

CC receptors in the meso-limbic dopamine system. The nucleotide sequences of
CC the invention and the polypeptides encoded by them are useful in the
CC manufacture of a medicament useful for preventing, treating, modulating
CC or ameliorating a medical condition e.g. a neuropsychiatric disorder. An
CC antibody that binds the proteins of the invention is useful for
CC preventing, treating, modulating or ameliorating neurological disorders
CC such as psychoses or other neuropsychiatric disorders in a subject. The
CC sequences are also useful for diagnosing neurological disorders or a
CC susceptibility to a neurological disorder such as psychoses and other
CC neuro psychiatric disorders in a subject by determining the presence or
CC absence of mutation in the nucleotide sequence of apolipoprotein D or by
CC determining the alteration (increase or decrease) in the expression of
CC apolipoprotein D. The sequences of the invention are useful in treating
CC deficiencies or disorders of the central nervous system or peripheral
CC nervous system by activating or inhibiting the proliferation,
CC differentiation or mobilisation (chemotaxis) of neuroblasts, stem cells
CC or glial cells. The sequences are useful as a marker or detector of a
CC particular nervous system disease or disorder such as Alzheimer's
CC disease, Pick's disease, Binswanger's disease, other senile dementia,
CC Parkinson's disease, obsessive compulsive disorders, epilepsy,
CC encephalopathy, ischaemia, addiction, multiple sclerosis, depression and
CC manic-depressive disorder. The present sequence represents an
CC oligonucleotide primer used in the identification of the cDNA sequences
CC of the invention

PT New polynucleotides related to regulated genes characteristic of
PT atherosclerosis, useful for diagnosing, preventing, treating, modulating
PT or ameliorating atherosclerosis in a mammalian subject.
XX
PS Disclosure; Page 28; 130pp; English.
XX
CC The present invention describes an isolated polynucleotide (I) and its
CC complements, and degenerate variants, comprising a sequence selected from
CC those given in ABQ73206 to ABQ73222 (NS), which is a digital sequence tag
CC (DST) corresponding to mRNAs whose expression is regulated by
CC proliferative lesion development caused by mechanically induced intimal
CC hyperplasia, or by lercanidipine treatment, or by proliferative lesions
CC and reversed by lercanidipine treatment. (I) has antiatherosclerotic
CC activity and can be used in gene therapy. (I) can be used for diagnosing
CC a medical condition (e.g. atherosclerosis) in a subject which involves
CC determining the presence or absence of a mutation in (I) and diagnosing
CC the medical condition based on the presence or absence of the mutation.
CC (I) is also useful for diagnosing atherosclerosis, or the susceptibility
CC to atherosclerosis in a subject which involves detecting an alteration
CC (an increase or decrease) in amount of expression of (I). (I) is also
CC useful for diagnosing or monitoring the effects of treating a subject
CC with dihydropyridine calcium antagonist e.g., lercanidipine. (I) can also
CC be used for preventing, treating, modulating, or ameliorating a medical
CC condition such as atherosclerosis in a mammalian subject. The present
CC sequence represents a TOGA primer which is used in the exemplification of
CC the present invention

PT Preventing and treating hepatitis viral infection in a mammal, comprises
PT administering nucleic acid molecules that up- or down-regulate in
PT hepatitis B virus infection or polypeptides encoded by the nucleic acid
PT molecules.
XX
PS Disclosure; Page 28; 125pp; English.
XX
CC The present invention relates to a method for preventing, treating,
CC modulating or ameliorating a medical condition. The method involves
CC administering one or more nucleic acid molecules up- or down-regulated in
CC hepatitis B virus (HBV) infection or polypeptides encoded by the nucleic
CC acid molecules or antibodies that bind to the polypeptide. The method is

```
CC   useful for preventing, treating, modulating or ameliorating a medical
CC   condition. It is also useful for determining the presence or absence of a
CC   mutation in the nucleic acid molecules or detecting an alteration in
CC   expression of the polypeptide which is useful for the diagnosis of
CC   hepatitis viral infection. The method is useful for assessing the stage
CC   of hepatitis viral infection (e.g., acute hepatitis versus chronic
CC   hepatitis) or assessing the efficacy or toxicity of therapeutic treatment
CC   for hepatitis viral infection and a gene expression profile is useful for
CC   identifying polypeptides and polynucleotides which are associated with
CC   hepatitis viral infection. Sequences of the invention are used in gene
CC   therapy and as vaccines. Nucleic acid sequences are useful as a
CC   diagnostic markers for HBV infection and for treating infectious
CC   diseases. The present DNA sequence is a PCR primer which is used for
CC   direct sequencing of TOGA (TOtal Gene expression Analysis) generated PCR
CC   products

PT   Control of gibberellin levels in plants useful to avoid unfavorable
PT   conditions in crops to increase yields, using transgenic plants having
PT   reduced seed germination and early seedling growth then treatment to
PT   restore these properties.
XX
PS   Example 19; Page 104; 155pp; English.
XX
CC   The invention relates to control of gibberellin (GA) levels in plants.
CC   The method involves producing transgenic plants having a phenotype of
CC   reduced seed germination and reduced early seedling growth, then
CC   restoring seed germination and early seedling growth by treating plants
CC   with an appropriate compound when conditions are favourable. The method
CC   is useful to control seed germination and/or early seedling growth in
CC   agricultural production so that unfavorable environmental conditions
CC   normally reducing agronomic output can be avoided and yields increased.
CC   Plants also demonstrate increased uniformity of germination, emergence
CC   and seedling vigor, so increasing yields at harvest. The method is
CC   especially useful in crop plants such as e.g. canola, soybean, cotton,
CC   etc:, and is also useful in storage and transport of seeds to reduce
CC   premature germination which may affect agronomic or food quality of the
CC   seeds. The present sequence is a PCR primer used to isolate pumpkin 2beta
CC   -3beta hydroxylase cDNA. This primer is used in the exemplification of
CC   the invention

XX
CC   The present invention describes a method for preventing or treating a
CC   pathological condition (comprising ataxia telangiectasia (AT), AT tumours
CC   or other cancers), which comprises administering to a mammalian subject
CC   at least one of: (a) a first polynucleotide comprising a sequence having
CC   38-889 bp (consisting of the sequences in ACC79319 to ACC79392 (I)) or a
CC   second polynucleotide at least 95% identical to the first polynucleotide;
CC   (b) a third polynucleotide comprising at least 10-bp sequence that is
CC   hybridisable to the first polynucleotide under stringent conditions; or
CC   (c) a gene corresponding to any of (1)-(2) or another gene at least 95%
CC   identical to the gene. (I) have cytostatic activities, and can be used in
CC   vaccines and in gene therapy. The method is useful for preventing or
CC   treating e.g., ataxia telangiectasia (AT), AT tumours or other cancers.

PT   New polypeptide associated with atherosclerosis, useful for treating
PT   atherosclerosis, nervous system disorders, immune disorders,
PT   hyperproliferative disorders and infectious diseases.
XX
PS   Disclosure; Page 139; 146pp; English.
XX
CC   The invention relates to polynucleotides and polypeptides associated with
CC   atherosclerosis. Polynucleotides of the invention are useful for delivery
CC   of genes, DNA vaccines, diagnostic reagents, peptides, proteins or
CC   macromolecules. Sequences of the invention are useful for treating
CC   nervous system disorders (e.g., Alzheimer's disease, Parkinson's disease,
CC   multiple sclerosis, epilepsy), immune disorders (e.g., autoimmune
CC   disorders such as rheumatoid arthritis, Addison's disease, haemolytic
CC   anaemia, graft-versus-host disease, inflammation), hyperproliferative
CC   disorders (e.g., neoplasms) and infectious diseases (e.g., viral,
CC   bacterial, fungal or parasite infection). They are used for regeneration
CC   of tissues, to repair, replace or protect damage tissues, for increasing
CC   chemotaxis activity of cells, for increasing or decreasing the
CC   differentiation or proliferation of embryonic stem cells from a lineage,
CC   for modulating mammalian characteristics, (such as body weight or
CC   height), for modulating mammalian metabolism affecting catabolism,
CC   anabolism, processing utilisation and storage of energy, to change a
CC   mammal's mental or physical state, or as a food additive or preservative.
CC   The invention is useful in gene therapy. The present sequence is a
CC   sequencing primer used in the invention

PT Simplified TOGA method for simultaneous sequence-specific identification
PT of multiple mRNA molecules in mRNA population, useful for determining
PT tissue-specific patterns of gene expression or mechanisms of drug
PT interaction.
XX
PS Disclosure; Page 39; 93pp; English.
XX
CC The present invention relates to a novel simplified TOGA (RTM) method for
CC simultaneous sequence-specific identification of multiple mRNA molecules
CC in a RNA population. The method involves characterising each of the
CC sequence-specific polymerase chain reaction (PCR) products by partial
CC sequence and length. The method is useful for determining tissue-specific
CC patterns of gene expression or mechanisms of drug interaction. It is also
CC useful for drug screening, studying physiological processes, genomic
CC mapping or manufacture of diagnostic, prognostic or therapeutic reagents.
CC The present sequence is a primer used to illustrate the method of the
CC invention

PT New tumor-associated oligopeptide, useful particularly for treating
PT multiple myeloma, is recognized by CD8 cytotoxic T cells, also
PT derivatives and related nucleic acid.
XX
PS Disclosure; Page 22; 64pp; German.
XX
CC This invention describes a novel tumor-associated oligopeptide that is
CC recognized as an antigen by CD8+ cytotoxic T lymphocytes (CTL) and causes
CC CTL-induced lysis and/or apoptosis of tumor cells, especially multiple
CC myeloma cells. The oligopeptide is derived from human PRDI-BF1 (positive
CC regulatory domain I-binding factor-1) which is able to induce an MHC
CC (major histocompatibility complex) Class I allele variant A2-restricted
CC immune response of CD8+ CTL against tumor cells. The products of the
CC invention have cytostatic activity and can be used in a vaccine. The
CC peptide of the invention, also related retro-inverse and pseudopeptides,
CC fusion proteins (FP), polynucleotides, vectors, host cells and antibodies
CC and T cell receptors specific for PRDI-BFI peptides are useful for
CC treating diseases associated with PRDI-BF1, particularly tumors. The
CC products of the invention are also useful as diagnostic, therapeutic and
CC prophylactic agents for detecting, modifying, generating, expanding
CC and/or regulating activation and functional status of T cells, and for
CC preparation of poly- or mono-clonal or recombinant A2-restricted T cell
CC receptors and their functional equivalents. This sequence represents an
CC RT-PCR primer used to amplify the human PRDI-BF1 gene described in the
CC invention.

PT   Preparing a library of same-length signature sequences from a source
PT   nucleic acid population by ligating to the cleaved ends, a second adapter
PT   containing a recognition and cleavage site for a second restriction
PT   endonuclease.
XX
PS   Disclosure; Fig 2a; 54pp; English.
XX
CC   This invention relates to a novel method for preparing a library of same-
CC   length signature sequences from a source nucleic acid population.
CC   Specifically, it comprises producing solid phase cloned libraries of
CC   oligonucleotide tag-DNA signature sequence constructs, which are useful
CC   for sequencing many polynucleotides simultaneously. The present invention
CC   describes a kit for the construction of adapter-signature-adapter
CC   constructs using 'first' and 'second' adapters each containing a specific
CC   restriction endonuclease recognition site, and which flanks the same
CC   length signature sequence. As such, using the method described herein it
CC   is possible to do parallel sequencing of large populations of
CC   polynucleotides for genomic mapping, genetic identification and medical
CC   diagnostics. This oligonucleotide sequence is a DNA oligo involved in the
CC   step wise process of preparing a library of same length signature
CC   sequences from restriction fragments in an exemplification of the
CC   invention.

CC   The invention comprises DNA sequences which are associated with
CC   intestinal epithelium and peyer's patch M cells. The DNA sequences of the
CC   invention are useful for assessing, modifying, modulating or regulating
CC   intestinal epithelium or M cell development. The DNA sequences of the
CC   invention are also useful in the treatment of: inflammatory bowel
CC   disease, glutenenteropathy, infectious diseases, autoimmune diseases
CC   (e.g. haemolytic anaemia, rheumatoid arthritis, dermatitis, Grave's
CC   disease, multiple sclerosis, allergy, asthma and diabetic mellitus),
CC   diseases or disorders of the immune system, hypersensitivity,
CC   anaphylaxis, and blood group incompatibility. The present DNA sequence
CC   represents a primer that was used in the exemplification of the
CC   invention.

PT   New isolated RNAs comprising an intron RNA that is released in a cell,
```

```
PT   thus modulating the function of a target gene, useful for treating and
PT   preventing diseases such as cancer and viral/microbial infections.
XX
PS   Claim 2; SEQ ID NO 2; 54pp; English.
XX
CC   The invention relates to isolated RNAs comprising an intron RNA that is
CC   released in a cell, thus modulating the function of a target gene. Also
CC   disclosed is a DNA template for the isolated RNA, an expression vector
CC   comprising the DNA, and a composition comprising one or more agents that
CC   induce RNA-mediated modulation of the functions of two or more target
CC   genes in a cell, such as a mammalian cell. The isolated RNAs and
CC   compositions are useful for modulating the function of a target gene in a
CC   cell, e.g. to inhibit a cancer-related gene, potential viral gene, and
CC   microbe-related gene, and thus useful for treating and preventing
CC   diseases such as cancer and viral/microbial infections. The current
CC   sequence represents a potential poly-pyrimidine tract of the artificial
CC   RNA intron.

XX
PT   Determining the concentration of a target nucleic acid, useful e.g. for
PT   detecting genetic mutations, comprises using a fluorescently labeled
PT   probe in which emission is reduced by binding to the target nucleic acid.
XX
PS   Example 6; Page 23; 55pp; English.
XX
CC   The invention relates to the determination of the concentration of a
CC   nucleic acid target, using a fluorescently labeled probe which produces
CC   reduced fluorescence emission when hybridised to the target nucleic acid.
CC   The method comprises measuring the reduction in emission caused by
CC   hybridisation. The new method is particularly used to quantify target
CC   nucleic acids by a real-time polymerase chain reaction, e.g. for
CC   quantifying microbial cells in co-cultures or symbiotic systems, for
CC   detecting gene mutations or polymorphisms, and for analysing melting
CC   curves of target nucleic acids to determine a Tm value. Methods of the
CC   invention allow target nucleic acids to be quantified quickly, easily and
CC   accurately. Particularly there is no need to remove unbound probe, and no
CC   materials are introduced that inhibit amplification by Taq polymerase (so
CC   conventional PCR conditions can be used). The specificity of PCR is kept
CC   high (amplification of primer dimers is delayed), and the limit of
CC   quantitation is reduced. Complex probes are not needed, and amplification
CC   can be monitored in real time. The working graph for data analysis
CC   (automatically generated by a computer) has a higher correlation
CC   coefficient than conventional graphs so more accurate quantitation is
CC   possible. The current sequence represents a synthetic
CC   deoxyribooligonucleotide that was used for investigating the effects of
CC   the number of G(s) in each target nucleic acid, and the number of G(S) in
CC   its corresponding invention nucleic acid probe

PT   Isolated nucleic acid molecules having polymorphisms in known human genes
PT   e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers
PT   for locating, identifying and characterizing the genes responsible for
PT   disorder-related traits.
XX
PS   Example 28; Page 160; 714pp; English.
XX
CC   This invention relates to the sequence of an isolated nucleic acid
CC   molecule comprising at least one base variation from that of a known
CC   human cytochrome P450 A1 (CYP4501A1), cytochrome P450 A2 (CYP4501A2),
CC   cytochrome P450 02E1 (CYP45002E1), adrenergic receptor beta1 (ADBR1),
CC   aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
CC   (ARNT), cathepsin S (CTSS), cyclooxgenase 2 (COX2), diazepam binding
CC   inhibitor (DBI), epoxide hydroxylase 2 (EPHX2), 5-lipoxygenase activating
CC   protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
CC   transferase (HNMT), (kallikrein 2) KLK2, nicotinamide -N-methyl
CC   transferase (NNMT), NADPH quinone oxidoreductase 2 (NQO2),
CC   sulfotransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4
CC   (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
CC   transferase (UGT2B15), urokinase receptor (uPA), multidrug resistance 1
CC   (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3
CC   (MRP3), orphan nuclear receptor (NR1I2), or acetylcholine muscarinic
CC   receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
CC   The polymorphisms in the human genes cited in the invention are useful as
CC   genetic linkage markers for locating and characterising the genes that
CC   are responsible for specific traits within the genome and eventually
CC   identifying the genes responsible for a variety of disorder-related
CC   traits as a result of their e.g., overexpression, constitutive
CC   expression, mutation or underexpression, which may be used in diagnosing
CC   and/or treating the disorders. The nucleic acid molecules comprising the
CC   polymorphic sequences contained in CYP4501A1, CYPP4501A2, CYP4502E1,
CC   ARNT, EPHX2, GST12, NNMT, NQO2, NR1I2, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
CC   MDR1 and/or MDR3 are useful for screening individuals for altered drug
CC   metabolism. The polymorphic sequences contained in CYP4501A1, CYPP4501A2,
CC   AHR, MDR1 and/or MDR3 may also be used to screen individuals for
CC   susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
CC   used to screen for altered cardiovascular function, in COX2 for altered
CC   susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
CC   nervous system function, in FLAP and HNMT for altered pulmonary,
CC   immunological or haematological function, in KLK2 for altered serine
CC   protease activity in the prostate, in LTF for altered immunological or
CC   haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
CC   peripheral nervous system function. The present sequence represents a
CC   polymorphic DNA sequence of the invention

XX
CC The present sequence represents a preferred target sequence for an
CC enzymatic nucleic acid (i.e. a ribozyme) which cleaves ICAM-1 mRNA at the
CC nucleotide base position indicated in the DE line. Regions of the mRNA
CC that do not form secondary folding structures and that contain potential
CC hammerhead and hairpin ribozyme cleavage sites were identified by
CC computer analysis. Ribozymes directed against these mRNA sequences were
CC designed and synthesised with modifications that improve their nuclease
CC resistance. The ribozymes cleave the ICAM-1 target sequences and thereby
CC inhibit ICAM-1 expression, making them useful for reducing transplant
CC rejection and alleviating symptoms in patients with rheumatoid arthritis,
CC asthma and other inflammatory disorders. (Updated on 25-MAR-2003 to
CC correct PI field.)

PT Enzymatic nucleic acid molecules having a hammer-head motif - used for
PT the treatment of arthritis, induction of graft tolerance or treatment of
PT auto-immune diseases.
XX
PS Claim 10; Page 177; 307pp; English.
XX
CC The present invention describes a novel enzymatic nucleic acid (ENA)
CC having a hammerhead motif (HM) comprising: (i) at least 5 ribose residues
CC ; (ii) a 2'-C-allyl modification at position 4 of the ENA; (iii) at least
CC ten 2'-O-methyl modifications; and (iv) a 3'-end modification. The ENA's
CC can inhibit collagenase and stromelysin production in the synovial
CC membrane of joints for the treatment or prevention of arthritis,
CC particularly osteoarthritis or rheumatoid arthritis. The ENA's can also
CC be used to treat antigen presenting cells of a donor to induce tolerance
CC in a recipient to an alloantigen of a donor. They can also be used for
CC enhancing graft tolerance or for treating autoimmune disease, and for
CC treating allergies and other inflammatory conditions. The ENA's can also
CC be used in diagnosis. Ribozyme therapy impacts on the expression of
CC stromelysin without introducing the non-specific effects upon gene
CC expression which accompany treatment with retinoids and dexamethasone.

```
CC   The concentration of ribozyme required to affect a therapeutic treatment
CC   is lower than that required of antisense molecules, and is highly
CC   specific. The present sequence is used in the exemplification of the
CC   present invention

PT   Synthesis of N3' to P5' phosphoramidate oligo:nucleotide - by reacting
PT   immobilised 3'-amino nucleotide with new amino:nucleoside 5'-
PT   phosphoramidite then oxidation, useful as research, diagnostic and
PT   therapeutic agents.
XX
PS   Disclosure; Page 28; 60pp; English.
XX
CC   A new method is provided for the synthesis of oligonucleotides having N3'
CC   ->P5' phosphoramidate linkages. The method comprises (a) attaching a 3'-
CC   protected amino nucleoside to a solid support; (b) deprotecting the 3'-
CC   amino; (c) reacting with a 3'-protected aminonucleoside-5'-
CC   phosphoramidite monomer to form an internucleoside N3'-> P5'
CC   phosphoramidite link; (d) oxidising this link to phosphoramidate; and
CC   optionally repeating steps (b)-(d) until the required oligonucleotide is
CC   completed. This method provides better yields with lower reagent
CC   consumption than known processes, and can be operated on a large scale.
CC   The obtained oligos, containing phosphoramidate linkages, have favourable
CC   binding properties, nuclease resistance and solubility, and are useful as
CC   research, diagnostic and therapeutic agents. The present sequence is an
CC   example of an oligonucleotide in which N3'->P5' phosphoramidate linkages
CC   have been introduced by the new method. (Updated on 25-MAR-2003 to
CC   correct PR field.)

XX
PT   New release tag compounds for detecting target molecule(s) - comprising a
PT   reactive group, a release group and a releasable non-volatile mass label
PT   detectable by mass spectrometry.
XX
PS   Example 3; Page 92; 170pp; English.
XX
CC   The sequence is that of an oligonucleotide primer which was produced as
CC   part of an oligonucleotide peptide conjugate as an example of a release
CC   tag compound (RTC). These comprise a reactive group, a release group and
CC   a non-volatile mass label comprising a synthetic polymer or biopolymer
CC   detectable by mass spectrometry. The RTCs can be used as probes for the
CC   detection of TMs. They can be used for e.g. identification of gene
CC   sequences, identification of non-coding nucleotide sequences,
CC   identification of mutations within a gene or protein sequence, detection
CC   of metals, detection of toxins, detection of receptors on an organism or
CC   a cell, characterisation of antibody-antigen interactions, enzyme-
CC   substrate interactions and characterisation of ligand interactions.
CC   Multiplex applications include multiple pathogen diagnostics, multigene
CC   genetic polymorphism screening, single nucleotide polymorphism (SNP)
CC   genotyping, clone and gene mapping, and gene expression analysis. The
CC   RTCs permit the ready detection of releasable mass labels by mass
CC   spectroscopy. The releasable mass labels permit the multiplexing of tens,
CC   hundreds and perhaps even thousands of different mass labels that can be
CC   used to uniquely identify each desired target

PT   Separation of electrically charged target molecules - by capillary
PT   affinity gel electrophoresis using polymer-gel to which receptors for
PT   target molecules are bound.
XX
PS   Example A1; Page 22; 41pp; English.
XX
CC   This sequence represents an oligonucleotide receptor molecule covalently
CC   bound to a polyacrylamide gel via a linking group. The invention relates
CC   to selective separation of electrically charged target molecules in an
CC   analytical mixture. It comprises capillary affinity gel electrophoresis
CC   using a capillary tube which is at least partly filled with a polymer
CC   gel. Receptors for target molecules are covalently bound to the polymer.
CC   An electric field of at least 50 volts/cm is applied. The capillary tube
CC   is charged with the analytical mixture. In a first separation stage, the
CC   target molecules in the mixture are bound to the receptors and the
CC   remaining components are eluted, optionally whilst splitting open. In a
CC   second stage, the elution conditions are changed, optionally in stages,
CC   so that the affinity of the target molecules for the receptor is
CC   eliminated and the target molecules are eluted and detected, optionally
CC   whilst splitting open. The process is useful for selective separation
CC   and/or determination of charged organic compounds, such as
CC   oligonucleotides, peptides or carbohydrates. It may be used, e.g. for
CC   isolation of specific proteins and DNA molecules, purification of
CC   antibodies, analysis of antisense compounds or screening for enzyme
CC   inhibitors. The process achieves higher resolution and selectivity than
CC   prior art processes, especially in the case of complex biological
CC   analytical mixtures. It has high sensitivity, even with small amounts of
CC   samples. The derivatised polymers may be synthesised specifically using
CC   standard methods

PT   Separation of electrically charged target molecules - by capillary
PT   affinity gel electrophoresis using polymer-gel to which receptors for
PT   target molecules are bound.
XX
PS   Example D3; Page 25; 41pp; English.
XX
CC   A mixture of oligonucleotides (AAT86604-7) were separated by a new
CC   process using capillary affinity gel electrophoresis. The invention
CC   relates to selective separation of electrically charged target molecules
CC   in an analytical mixture. It comprises capillary affinity gel
CC   electrophoresis using a capillary tube which is at least partly filled
CC   with a polymer gel. Receptors for target molecules are covalently bound
CC   to the polymer. An electric field of at least 50 volts/cm is applied. The
CC   capillary tube is charged with the analytical mixture. In a first
CC   separation stage, the target molecules in the mixture are bound to the
CC   receptors and the remaining components are eluted, optionally whilst
CC   splitting open. In a second stage, the elution conditions are changed,
CC   optionally in stages, so that the affinity of the target molecules for
CC   the receptor is eliminated and the target molecules are eluted and
CC   detected, optionally whilst splitting open. The process is useful for
CC   selective separation and/or determination of charged organic compounds,
CC   such as oligonucleotides, peptides or carbohydrates. It may be used, e.g.
CC   for isolation of specific proteins and DNA molecules, purification of
CC   antibodies, analysis of antisense compounds or screening for enzyme
CC   inhibitors. The process achieves higher resolution and selectivity than
CC   prior art processes, especially in the case of complex biological
CC   analytical mixtures. It has high sensitivity, even with small amounts of
CC   samples. The derivatised polymers may be synthesised specifically using

XX
CC   This sequence represents a primer of the invention. The invention relates
CC   to sequences of at least two nucleotides of formula: (X)m5'-(alpha)n-beta
CC   -N3'; or (X)m5'-(gamma)k-delta-N3'; where X = a labelled compound and/or
CC   a nucleotide with voluntary sequence; m = 0 or 1; alpha = thymine; n =
CC   natural number indicating the repetition of alpha; beta, delta = V or N;
CC   V = adenine, guanine or cytosine; N = adenine, guanine, cytosine or
CC   thymine; gamma = thymine; k = natural number of 3 or over indicating the
CC   repetition of gamma, in which thymine expressed by gamma is composed of
CC   1/3 or less of adenine, guanine and/or cytosine. The new nucleotides are
CC   useful as primers for RT-PCR and determination of base sequences. The new
CC   sequences allow for reproductive and highly efficient analysis of gene
CC   sequences

XX
CC   The present sequence represents the preferred target sequence of an
```

```
CC   enzymatic nucleic acid, especially a hammerhead ribozyme, which cleaves
CC   the Hepatitis C virus (HCV) RNA sequence in the 3' non-core region. The
CC   HCV sequence was screened for optimal ribozyme target sites using a
CC   computer folding algorithm and regions of the mRNA which did not form
CC   secondary folding structures and contained potential ribozyme cleavage
CC   sites were identified. Ribozymes were synthesised to target these sites
CC   and their activities optimised by either varying the length of the
CC   binding arms or by modification to prevent degradation by nucleases. The
CC   ribozymes of the invention inhibit gene expression and/or viral
CC   replication, and are used to treat diseases associated with Hepatitis C
CC   virus (HCV) infection, e.g. cirrhosis, liver failure and hepatocellular
CC   carcinoma. The ribozymes may be used in combination with interferon to
CC   treat HCV infection, other infectious diseases, autoimmune diseases, and
CC   cancer

PT   New DNA encoding endo-beta-mannanase from coffee, used e.g. in
PT   pharmaceutical, cosmetic or food compositions to hydrolyze polymannans.
XX
PS   Disclosure; Page 32; 41pp; French.
XX
CC   PCR primers AAA46501-02 were used to amplify DNA encoding an endo-beta-
CC   mannanase enzyme, which is involved in the hydrolysis of polysaccharides
CC   that consist of molecules of mannan, either simple or branched, linked
CC   together by beta(1-4) bonds. The mannanase polynucleotide sequence is
CC   used for in vivo modification of the coffee endo-beta-mannanase gene. It
CC   is also used to produce transgenic plant cells (especially coffee cells)
CC   which have modified properties of mannan polysaccharide, and thus altered
CC   flavour or structure. The enzyme is used for modification, degradation or
CC   synthesis of mannan polysaccharides in vitro, particularly to treat
CC   coffee beans to increase the percentage of dry matter extraction, and
CC   thus reduce the quantity of sediment

PT   New polynucleotides encoding a polypeptide having heparanase activity,
PT   useful in wound healing and in gene therapy, particularly in treating
PT   tumor, inflammation, autoimmunity, neurodegenerative diseases.
XX
PS   Disclosure; Page 44; 152pp; English.
XX
CC   The present primer was used to reverse transcribe human RNA, from which a
CC   cDNA sequence encoding a protein with heparanase catalytic activity was
CC   amplified. The heparanase (hpa) polynucleotide is useful in gene therapy,
CC   particularly in treating tumour, inflammation or autoimmunity.
CC   Particularly, the polynucleotide is useful in modulating the
CC   bioavailability of heparin-binding growth factors, cellular responses to
CC   heparin-binding growth factors (e.g. bFGF) and cytokines (e.g.
CC   interleukin (IL)-8), cell interaction with plasma lipoproteins, cellular
CC   susceptibility to certain viral and some bacterial and protozoa
CC   infections, or disintegration of neurodegenerative plaques. The
CC   polynucleotide is also useful in wound healing (e.g. thermal, chemical or
CC   radiation burns), and in the treatment of angiogenesis, restenosis,
CC   atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-
CC   Straussler Syndrome or Creutzfeldt-Jakob disease), and some viral,
CC   bacterial or protozoa infections

PT   Modified nucleomonomers, used in physiologically stable, non-toxic
PT   oligomers used to inhibit expression of nucleic acids and in gene
PT   regulation, antisense technology and diagnostics.
XX
PS   Disclosure; Page 20; 42pp; English.
XX
CC   The invention provides modified nucleomonomers of specified formula and
CC   their pharmaceutically acceptable salts. The nucleomonomers are used as
CC   monomers in oligomers, which are used in pharmaceutical compositions to
CC   inhibit expression of nucleic acid molecules including DNA and RNA in
CC   cells such as bacterial, fungal, yeast, mammalian, cancer and virally-
CC   infected cells. They are used in oligomers for gene regulation, antisense
CC   technology, diagnostic applications to detect target sequences in
CC   biological samples such as those containing pathogenic bacteria, fungi
CC   and viruses, oncogenes, growth hormones and enzymes, to target genes or
CC   encoded RNAs that encode enzymes, hormones, serum proteins, adhesion
CC   molecules, receptor molecules, cytokines, oncogenes, growth factors and
CC   interleukins associated with pathological conditions such as inflammatory
CC   conditions, cardiovascular disorders, immune reactions, cancer, viral
CC   infections and bacterial infections (see AAA07786 for details of other
CC   uses for which the oligomers are suitable for). Oligomers comprising the
CC   nucleomonomers exhibit increased duplex DNA stability when hybridizing to
CC   target nucleic acid sequences, are physiologically stable, non-toxic and
CC   able to penetrate into cells while maintaining stringent base pair
CC   fidelity for target DNA sequences. The oligomers demonstrate significant
CC   single- or double-stranded target nucleic acid binding activity to form
CC   duplexes, triplexes or other forms of stable association. Sequences
CC   AAA07788-803 represent oligonucleotides forming a third strand along with
CC   the duplex sequences

CC   technology, diagnostic applications to detect target sequences in
CC   biological samples such as those containing pathogenic bacteria, fungi
CC   and viruses, oncogenes, growth hormones and enzymes, to target genes or
CC   encoded RNAs that encode enzymes, hormones, serum proteins, adhesion
CC   molecules, receptor molecules, cytokines, oncogenes, growth factors and
CC   interleukins associated with pathological conditions such as inflammatory
CC   conditions, cardiovascular disorders, immune reactions, cancer, viral
CC   infections and bacterial infections (see AAA07786 for details of other
CC   uses for which the oligomers are suitable for). Oligomers comprising the
CC   nucleomonomers exhibit increased duplex DNA stability when hybridizing to
CC   target nucleic acid sequences, are physiologically stable, non-toxic and
CC   able to penetrate into cells while maintaining stringent base pair
CC   fidelity for target DNA sequences. The oligomers demonstrate significant
CC   single- or double-stranded target nucleic acid binding activity to form
CC   duplexes, triplexes or other forms of stable association. Sequences
CC   AAA07788-803 represent oligonucleotides forming a third strand along with
CC   the duplex sequences

PT Modified nucleomonomers, used in physiologically stable, non-toxic
PT oligomers used to inhibit expression of nucleic acids and in gene
PT regulation, antisense technology and diagnostics.
XX
PS Disclosure; Page 20; 42pp; English.
XX
CC The invention provides modified nucleomonomers of specified formula and
CC their pharmaceutically acceptable salts. The nucleomonomers are used as
CC monomers in oligomers, which are used in pharmaceutical compositions to
CC inhibit expression of nucleic acid molecules including DNA and RNA in
CC cells such as bacterial, fungal, yeast, mammalian, cancer and virally-
CC infected cells. They are used in oligomers for gene regulation, antisense
CC technology, diagnostic applications to detect target sequences in
CC biological samples such as those containing pathogenic bacteria, fungi
CC and viruses, oncogenes, growth hormones and enzymes, to target genes or
CC encoded RNAs that encode enzymes, hormones, serum proteins, adhesion
CC molecules, receptor molecules, cytokines, oncogenes, growth factors and
CC interleukins associated with pathological conditions such as inflammatory
CC conditions, cardiovascular disorders, immune reactions, cancer, viral
CC infections and bacterial infections (see AAA07786 for details of other
CC uses for which the oligomers are suitable for). Oligomers comprising the
CC nucleomonomers exhibit increased duplex DNA stability when hybridizing to
CC target nucleic acid sequences, are physiologically stable, non-toxic and
CC able to penetrate into cells while maintaining stringent base pair
CC fidelity for target DNA sequences. The oligomers demonstrate significant
CC single- or double-stranded target nucleic acid binding activity to form
CC duplexes, triplexes or other forms of stable association. Sequences
CC AAA07788-803 represent oligonucleotides forming a third strand along with
CC the duplex sequences

PT   New conformationally restricted 3',5'-bridged nucleosides and
PT   oligonucleotides useful as antisense therapeutics or as gene-specific
PT   diagnostics.
XX
PS   Example 20; Col 16; 10pp; English.
XX
CC   The present sequence is an oligonucleotide containing 3'-C-amino-5'(S)-
CC   C,3'-N-ethanothymidine, a bicyclic-sugar nucleoside. All nucleotides in
CC   the sequence were incorporated by phosphoramidite chemistry using a DNA
CC   synthesiser. Bicyclic sugar nucleosides are conformationally restricted
CC   3',5'-bridged nucleosides which can be used as building blocks for
CC   oligonucleotides. Oligonucleotides can be produced that have certain,
CC   desired, geometrical shapes and entropy advantages. They may have
CC   superior hybridisation to DNA and RNA, and excellent biological
CC   stability. The conformationally-modified oligonucleotides may be useful
CC   as antisense inhibitors of gene expression or as gene probes, and may
CC   therefore be used in antisense therapeutics or gene-specific diagnostics

PT New hybridization probe for specific triplex formation with large double
PT helices, useful e.g. for site-specific diagnostic cleavage, contains
PT attached functional residue.
XX
PS Example 1; Fig 3B; 20pp; English.
XX
CC This invention relates to hybridisation probes which target a specific
CC sequence within a large double-helical nucleic acid. The probe is
CC complementary to the target sequence and contains at least one nucleotide
CC with an attached molecule that is able to cleave double-helical DNA e.g.
CC EDTA-Fe(II) (ethylenediaminetetraacetic acid-iron complex). The probes
CC where the attached molecule is a label or compound that alters gene
CC expression, are used for specific detection and/or cleavage of double-
CC helical DNA, e.g. for diagnosis, for treatment of disease (particularly
CC caused by viruses, genetic defects or oncogenes), for chromosomal
CC analysis, and for the isolation and mapping of genes. The present
CC sequence represents probe of the invention used in an example
CC illustrating how the probe binds to and cleaves double stranded DNA

PT Conjugate of oligonucleotide, minor groove binder and latent fluorophore,
PT useful for detecting specific nucleic acids, e.g. for single-nucleotide
PT mismatch discrimination.
XX
PS Disclosure; Page 58; 105pp; English.
XX
CC The present sequence is that of the oligonucleotide (ODN) component of an
CC ODN-MGB (minor groove binder)-LF (latent fluorophore) conjugate of the
CC invention. MGBs bind in a non-intercalating manner to the minor groove of
CC non-single-stranded DNA, RNA or their hybrids, while a LF binds similarly
CC but in an intercalating manner, or lies in the minor groove, or is
CC oriented in some other way to the DNA molecule by MGB, such that it
CC becomes fluorescent (or its fluorescent properties change detectably).
CC The conjugates are used as hybridisation probes and amplification primers
CC for fluorescent detection of specifically hybridising sequences, for
CC analysis or diagnosis, especially (real-time) PCR, for single-nucleotide
CC mismatch discrimination, target or signal amplification, array-based
CC assays and sequencing, including detection of double-stranded DNA by
CC triplex formation. Many different targets can be detected a single
CC reaction vessel. The present ODN-MGB-LF conjugate was used to demonstrate
CC hybridisation-triggered fluorescence. Upon hybridisation to the
CC complementary target sequence there was an increase in fluorescence
CC yield, measured as the ratio of the fluorescence emitted by the hybrid
CC between the ODN-MGB-LF conjugate and its target sequence to the
CC fluorescence emitted by unhybridised (i.e. single-stranded) ODN-MGB-LF,
CC of 8.3

PT Intermediate for oligonucleotide synthesis comprises partially hydrolysed
PT cross-linked vinyl acetate copolymer loaded with nucleotide derivative.
XX
PS Example 2; Page 5; 8pp; German.
XX
CC This invention describes a novel chemical product comprising a partially
CC hydrolysed cross-linked vinyl acetate copolymer carrier material loaded
CC with nucleotide derivative(s). The product is an intermediate for the
CC large (gram) scale solid phase synthesis of modified oligonucleotides

CC useful e.g. as clinical diagnostics and therapeutics, e.g. for the
CC treatment of AIDS and cancers. The presence of the partially hydrolysed
CC copolymer facilitates the synthesis of larger amounts of oligonucleotides
CC compared with the use of Merckogel (RTM; macroporous polyvinyl acetate)
CC described in Nucleic Acid Res. Sympos. Ser. 31, p. 153, 1994.
CC Oligonucleotides are obtained in very good quality and high yields, Also,
CC the nucleosides do not display the reduced activity seen in some prior
CC art procedures, less carrier material, reagents and solvent are required.
CC Further, the carrier material is biodegradable and thus does not present
CC disposal problems. It also swells uniformly in a range of solvents, which
CC obviates expansion or contraction during use or solvent exchange.
CC AAH20510-AAH20513 represent oligonucleotides containing modified
CC deoxynucleotides which are used to illustrate the method of the invention

PT Ameliorating the effects of a disorder, e.g. psoriasis, by administering
PT UV (ultra-violet) treatment (optional) and an antisense nucleic acid that
PT inhibits or reduces growth factor mediated cell proliferation and/or
PT inflammation.
XX
PS Example 8; Page 60; 201pp; English.
XX
CC The present invention relates to a method for ameliorating the effects of
CC skin disorders. The method comprises contacting the skin with an
CC antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1
CC receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of
CC inhibiting or reducing growth factor mediated cell proliferation,
CC inflammation and/or other disorders. The present sequence is an
CC oligonucleotide which can be used to design the antisense
CC oligonucleotides of the present invention (see AAF45151 and AAF45153-
CC F45161). The method is useful for ameliorating the effects of psoriasis,
CC ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis,
CC neoplasias, scleroderma, warts, benign growths, cancers of the skin, a
CC hyperneovascular condition such as a neovascular condition of the retina,
CC brain or skin, growth factor-mediated malignancies, other sclerotic
CC disease, kidney disease, hyperproliferation of the inside of blood
CC vessels or any other hyperplasia

PT New DNA-peptide nucleic acid chimeras, useful e.g. as antisense agents
PT for treating e.g. cancer, also as diagnostic probes and primers.
XX
PS Example 26; Page 40; 54pp; German.
XX
CC This invention describes novel polyamide-oligonucleotide derivatives (I)
CC and their physiologically acceptable salts of formula F((DNA)-Li)_q(PNA-
CC Li)_r(DNA-Li)_s(PNA)_t)_xF' where q, r, s, t = 0 or 1, with the sum of
CC two or more adjacent letters at least 2; x = 1-20; DNA = nucleic acid
CC (such as DNA or RNA or their known derivatives); Li = covalent linkage

CC between DNA and PNA, i.e. a bond or a residue containing at least one
CC atom of carbon, nitrogen, oxygen or sulfur; PNA = polyamide structure
CC containing at least one nucleobase different from thymine; and F, F' =
CC end groups and/or are connected through a covalent bond. The products of
CC the invention have anticancer, antiproliferative, antiviral, hepatotropic
CC and vasotropic activity and can be used for the inhibition of gene
CC expression by antisense, ribozyme, sense, or triple-helix methods, or by
CC binding to proteins (aptamers). (I) are used for treating diseases caused
CC by viruses (human immune deficiency, herpes simplex, influenza, vesicular
CC stomatitis, hepatitis B or papilloma), or mediated by integrins or cell-
CC cell adhesion reactions, for treating cancer, or for inhibiting
CC restenosis, particularly as antisense reagents. They are also useful in
CC heterogeneous or homogeneous assays, as primers or probes, particularly
CC where the target is amplified before being detected by hybridization, for
CC diagnosis of genetic, malignant or pathogen-related diseases. (I) retain
CC the increased affinity for complementary strands and better stability in
CC serum, associated with conventional peptide nucleic acids (PNA), but lack
CC the disadvantages, i.e. have improved cellular uptake, do not aggregate
CC in aqueous solution, and have reduced affinity for purification
CC materials, reduced cytotoxicity, better sequence specificity. They are
CC more active than either DNA or PNA oligomers. When used as probes, (I)
CC show different responses to base-pair mismatches in the DNA and PNA
CC segments, allowing better discrimination between pathogenic and non-
CC pathogenic conditions such as the transition from proto-oncogene to
CC oncogene, also, when used as primers, with the PNA segment at the 5'-end,
CC they produce amplicons resistant to 5'-exonuclease, allowing this enzyme
CC to be used to eliminate RNA or DNA primers. The DNA component allows
CC additional reactions not possible with PNA alone, e.g. 3'-tailing and (I)
CC may be incorporated into a gene. AAH49208-AAH49264 represent
CC oligonucleotides used to illustrate the method of the invention.

PT Oligonucleotides analogs useful in detection, separation and purification
PT of nucleic acid molecules, comprise monomers, dimers and oligomers.
XX
PS Example 20; Page 123; 197pp; English.
XX
CC This invention relates to oligonucleotide analogues comprising a protein
CC nucleic acid molecule (PNA) monomer. They are used in the detection and
CC separation of nucleic acid molecules and as probes, primers, linkers,
CC adapters and antisense agents on solid supports. Modifications enhance
CC their use as capture and detection probes e.g. by the incorporation of
CC biotin, digoxigenen, radioisotopes, fluorescent labels such as
CC fluorescein and reporter molecules such as alkaline phosphatase. They are
CC also used for enhancing or inhibiting the activity of an enzyme or
CC cellular activity. The compounds are stable to nucleases and proteases,
CC have high affinity, binding specificity and solubility. The polyamide

```
CC   backbone of PNAs is resistant to both nucleases and proteases. PNAs bind
CC   nucleic acid molecules with greater affinity than DNA or RNA
CC   concentration. The compounds are relatively simple to synthesize and are
CC   used in a wide variety of applications. This sequence represents a DNA
CC   oligomer which is used to represent the effect of single base mismatches
CC   on oligonucleotides

PT   New human pre-adipose cell line capable of differentiating to adipose
PT   cells, useful in developing drug, food ingredients, and supplements
PT   against obesity, diabetes and cardiovascular diseases.
XX
PS   Example 5; Page 10; 30pp; English.
XX
CC   The present invention relates to new human pre-adipose cell lines capable
CC   to differentiate to white adipose cells, exhibiting essentially the same
CC   cellular properties of normal white adipose cells. The human pre-adipose
CC   cell lines are useful for the identification of substances controlling
CC   the regulation of lipid uptake and release by human white adipocytes, and
CC   substances controlling the differentiation of preadipocytes into mature
CC   adipocytes. They are useful for screening compounds capable to regulate
CC   the secretion of any metabolites or hormones from human white adipocytes.
CC   Sequences of the invention are useful for developing drugs, food
CC   ingredients and supplements against obesity, diabetes and cardio-
CC   vascular diseases. The present DNA sequence is a reverse transcription
CC   (RT)-PCR primer which is used for the expression of adipocytes in
CC   differentiated immortalised human preadipose cells. This primer is used
CC   in the exemplification of the invention

PT   Derivatized antisense oligoribonucleotide useful to inhibit e.g. viral
PT   reverse transcriptase comprises at the 2'-O position of the
PT   oligoribonucleotide, a hydrophobic carrier reagent containing a poly
PT   substituted phenyl compound.
XX
PS   Example 3; Col 24; 56pp; English.
XX
CC   The invention relates to derivatised antisense oligoribonucleotides with
CC   enhanced membrane permeability and stability. The derivatised antisense
CC   oligoribonucleotide complementary to a sequence of nucleotides found in a
CC   virus or a cell is useful for inhibiting e.g., viral reverse
CC   transcriptase. Derivatised antisense oligoribonucleotide is conjugated at
CC   the 2'-O position with a hydrophobic carrier reagent containing a poly
CC   substituted phenyl compound. The derivatised oligoribonucleotides are
CC   used to decrease the expression of oncogenes and thereby decrease the
CC   expression of cancer cells which rely upon oncogene expression for their
CC   phenotypic and pathological properties. The oligoribonucleotides are also
CC   used for increasing the effectiveness of antisense oligonucleotide
CC   targetted to a gene associated with a disease or a condition in an
CC   animal. To alter gene transcription and/or translation for any gene or
CC   gene segment responsible for expression, to inhibit viral reverse
CC   transcriptase, to inhibit the expression of leukaemia virus, hepatitis
CC   virus, oncogenes and human immunodeficiency virus. The present sequence
CC   is retroviral reverse transcriptase inhibitor DNP-poly [A] RNA fragment
CC   which is used in the treatment of moloney murine leukaemia virus (MuLV)
CC   in mammals. (Updated on 07-AUG-2003 to correct OS field.) (Updated on 29-
CC   AUG-2003 to standardise OS field)

PT   New vectors comprising operably linked DNA fragments having an origin of
PT   replication, a selectable marker and a chimeric DNA construct, useful for
PT   silencing target nucleic acids and for producing large amounts of double-
PT   stranded RNA.
XX
PS   Claim 14; Page 74; 104pp; English.
XX
CC   The present invention describes a vector (I) comprising operably linked
CC   DNA fragments having: (a) origin of replication allowing replication in a
CC   recipient cell, preferably in bacteria such as Escherichia coli; (b)
CC   selectable marker region capable of being expressed in the recipient cell
CC   ; and (c) a chimeric DNA construct comprising: (i) promoter or promoter
CC   region capable of being recognized by RNA polymerases of a eukaryotic
CC   cell or by prokaryotic RNA polymerase; (ii) first, second, third and
CC   fourth recombination sites; (iii) 3' transcription terminating and
CC   polyadenylation region functional in the eukaryotic cell. The first and
CC   fourth recombination sites, or the second and third recombination sites
CC   are capable of reacting with a same recombination site, and preferably
CC   are identical. The first and second recombination sites, or the third and
CC   fourth recombination sites, do not recombine with each other or with a
CC   same recombination site. The vector is useful for producing large amounts
CC   of double-stranded RNA which can be used for silencing target nucleic
CC   acid sequences. The vectors can also be used to convert a DNA fragment
CC   into an inverted repeat structure. Plants transformed with a vector from
CC   the present invention can be used in a conventional breeding scheme to
CC   produce more plants with the same characteristics or to introduce a
CC   chimeric gene for reduction of the phenotypic expression of nucleic
CC   acids. The present sequence represents an acceptor vector nucleotide
CC   sequence from the present invention

PT   New ribozymes targeting RNA derived from hepatitis C virus inhibit viral
PT   replication and are useful to treat hepatitis C virus infections and
PT   cirrhosis, liver failure or hepatocellular carcinoma.
XX
PS   Claim 1; Page 21; 80pp; English.
XX
CC   The present invention relates to enzymatic nucleic acids which
CC   specifically cleave RNA derived from Hepatitis C virus (HCV). The
CC   enzymatic nucleic acid or ribozyme is in a hammerhead (HH) or hairpin
CC   (HP) motif where the binding arms comprise sequences complementary to one
CC   of the substrate sequences defined in the specification. The HCV
CC   ribozymes are useful for modulating the expression and/or replication of
CC   HCV. They can be used to treat cirrhosis, liver failure and/or
CC   hepatocellular carcinoma. The HCV ribozymes are also useful for treating
CC   a condition associated with HCV infection in conjunction with one or more
CC   other drug therapies, particularly type I interferon, especially
CC   interferon alpha, beta or gamma or consensus interferon. The present
CC   sequence represents a substrate for a HCV hammerhead (HH) ribozyme. Note:
CC   Some of the sequence data for this patent did not form part of the
CC   printed specification. The complete sequence data for this patent was

CC   The present sequence is of a hydrazine treated hydrazide precursor
CC   phosphoramidite 15-mer, designated oligo O39, which was produced in an
CC   example from the invention. The invention describes an improved process
CC   for immobilisation of macromolecules including DNA, RNA, peptide nucleic
CC   acids, pyranosyl-RNA and peptides, especially macromolecules containing
CC   multiple reactive sites, to a substrate surface or other conjugation
CC   target. It also describes the preparation of oligos containing one or
CC   more hydrazides, which can be used for conjugation to surface binding
CC   moieties, or for other conjugation reactions. The process is useful e.g.
CC   in nucleic acid hybridisation based assays, DNA chip technology and
CC   biosensor applications

PT   A triple-helix comprising a double helical nucleic acid (DHNA) and an
PT   oligonucleotide which binds in parallel and antiparallel orientation,
PT   respectively, for targetting sequences on alternate strands of DHNA to
PT   control gene expression.
XX
PS   Example 1; Fig 3B; 108pp; English.
XX
CC   The present invention relates to methods and oligonucleotides for forming
CC   a triple-helix comprising a double helical nucleic acid comprising first
CC   and second substantially complementary strands, and an oligonucleotide
CC   bound to a purine-rich target sequence within the double helical nucleic
CC   acid, where the oligonucleotide binds in a parallel and antiparallel
CC   orientation, respectively, to target sequences on alternate strands of
CC   the double helical nucleic acid. The method has therapeutic applications,
CC   where gene expression is controlled by selective triple-helix formation
CC   within expression regulatory sequences of a target gene. The
CC   oligonucleotides can be used to form triple-helices, and are useful to
CC   detect the presence or absence of specific sequences within genomic DNA
CC   for diagnostic and therapeutic purposes. The oligonucleotides can be
CC   selected to specifically bind to pathogenic double-stranded DNA including
CC   specific sequences required by pathogenic bacteria or viruses for
CC   replication or virulence, reducing their pathogenicity. Alternatively,
CC   the oligonucleotide can be chosen to target a unique sequence of the
CC   pathogen which is not found in the genome of pathogen's host. The
CC   oligonucleotides can be used in cancer treatment by way of triple-helix
CC   suppression of specific oncogenes including those of endogenous or viral
CC   origin. Such therapeutic oligonucleotides are capable of forming triple-
CC   helices with such sequences in cancerous cells containing the activated
CC   oncogene, so preferentially killing or repressing the cancer causing
CC   cell. The present sequence represents an oligonucleotide used in the
CC   methods of the present invention

PS Example 7; Fig 24A; 108pp; English.
XX
CC The present invention relates to methods and oligonucleotides for forming
CC a triple-helix comprising a double helical nucleic acid comprising first
CC and second substantially complementary strands, and an oligonucleotide
CC bound to a purine-rich target sequence within the double helical nucleic
CC acid, where the oligonucleotide binds in a parallel and antiparallel
CC orientation, respectively, to target sequences on alternate strands of
CC the double helical nucleic acid. The method has therapeutic applications,
CC where gene expression is controlled by selective triple-helix formation
CC within expression regulatory sequences of a target gene. The
CC oligonucleotides can be used to form triple-helices, and are useful to
CC detect the presence or absence of specific sequences within genomic DNA
CC for diagnostic and therapeutic purposes. The oligonucleotides can be
CC selected to specifically bind to pathogenic double-stranded DNA including
CC specific sequences required by pathogenic bacteria or viruses for
CC replication or virulence, reducing their pathogenicity. Alternatively,
CC the oligonucleotide can be chosen to target a unique sequence of the
CC pathogen which is not found in the genome of pathogen's host. The
CC oligonucleotides can be used in cancer treatment by way of triple-helix
CC suppression of specific oncogenes including those of endogenous or viral
CC origin. Such therapeutic oligonucleotides are capable of forming triple-
CC helices with such sequences in cancerous cells containing the activated
CC oncogene, so preferentially killing or repressing the cancer causing
CC cell. The present sequence represents an oligonucleotide used in the
CC methods of the present invention

CC The present sequence is that of the 5' end of a cDNA clone isolated from
CC a cDNA library e.g. a mosquito antenna library. A clone was isolated
CC using a method designed to rapidly array and normalize a complex cDNA
CC library obtained from a target species. Clones are arrayed into multi-
CC well plates. Each well contains 16 oligonucleotides (see ABV74137) with a
CC 5' polylinker, a poly-T run capable of binding cDNAs by their poly-A tail
CC and a unique 3' sequence, which allows an anchored oligonucleotide in
CC each well to selectively hybridise only to those cDNA clones with a
CC complementary 5' end. The unique 3' key sequences are designed to give a
CC comprehensive level of degeneracy since they are diverse and numerous
CC enough to ensure that every possible cDNA sequence can be bound by an
CC individual, specific oligonucleotide in a single well. The cDNA library
CC is heated to denature the clones into single stranded DNA, and an aliquot
CC is added to every well. The anchored oligonucleotide serves as the 3'
CC primer in PCR, and the common 5' region present in every cDNA clone
CC serves as the 5' priming site. Denaturing and washing leave anchored cDNA
CC in each well. The library is now arrayed and normalised. The method was
CC used to identify and isolate clones encoding G-protein coupled receptors,
CC especially odourant receptors, and active effectors involved in the
CC olfactory pathway of invertebrates and vertebrates, e.g. odourant binding
CC proteins, or other olfactory or neuronal proteins. The identified
CC receptors and proteins are useful for identifying compounds that reduce a
CC target animal's sensitivity to odours, for manufacturing compounds or
CC devices that mask odours, or trapping invertebrates with odourants.
CC Semiochemicals (e.g. arometics or pheromone mimetics) can be developed
CC with desirable effects on specific species, for the development of pest
CC monitoring systems or non-toxic, species-specific pesticide alternatives,
CC for controlling insect feeding and breeding behaviour, detecting the
CC presence of small air-borne molecules, etc

PT   New oligonucleotide deprotection reagent useful for deprotecting
PT   oligonucleotide comprises an active methylene compound and an amine
PT   reagent.
XX
PS   Example 2; Page 25; 46pp; English.
XX
CC   The present invention provides a method for deprotection of an
CC   oligonucleotide. This involves reacting a protected oligonucleotide,
CC   which is preferably covalently attached to a solid support through a
CC   linkage, with a deprotection reagent comprising an active methylene
CC   compound and an amine reagent. The process and reagent minimise side-
CC   reactions leading to certain impurities that contaminate synthetic
CC   oligonucleotides. The present sequence is a T15 phosphoramidite
CC   oligonucleotide having a quencher moiety (Q) and minor groove binder
CC   (CDPI3) at the 3' end, which was synthesised in an example of the
CC   invention. This protected oligonucleotide was treated either with 15%
CC   ethanolic ammonia or with 3% diethylmalonate (DEM) dissolved in 15%
CC   ethanolic ammonia for 2 hours at 55 degrees C. HPLC analysis showed that
CC   deprotection without DEM yielded a complex mixture of products containing
CC   only 26.5% of the desired product. When DEM was used, 76.8% of the
CC   desired product was obtained

PT   Hairpin sensor useful for detecting a target nucleotide sequence in a
PT   sample, comprises a hairpin loop assembly including a complementary probe
PT   and a quenchable fluorescing agent.
XX
PS   Example 2; Page 11; 16pp; English.
XX
CC   The invention discloses a hairpin sensor comprising a hairpin loop
CC   assembly including a complementary probe positioned between a first
CC   inverse repeat arm and a second inverse repeat arm, and a quenchable
CC   fluorescing agent joined, directly or indirectly, to the end of the
CC   second inverse repeat arm of the hairpin loop assembly opposite the
CC   complementary probe. Also claimed is a microarray comprising the hairpin
CC   sensor, where the end of the first inverse repeat arm opposite the
CC   complementary probe is bound, directly or indirectly, to a support, a kit
CC   for detecting a target nucleotide sequence in a sample comprising the
CC   hairpin sensor, and a support, and a hairpin sensor system, in which the
CC   particle is conductive or semi-conductive, including at least one of the
CC   above hairpin sensor assemblies. The hairpin sensor further comprises a
CC   functional group joined to the end of the first inverse repeat arm
CC   opposite the complementary probe, or first spacer opposite the first
CC   inverse repeat arm, the functional group selected from amino, carboxyl,
CC   thiol and hydroxyl. Further, the sensor comprises a ligand positioned
CC   between the second inverse repeat arm and the quenchable fluorescing
CC   agent, where the ligand is selected from mercapto, hydroxyl, amino,
CC   nitrile and carboxyl, carboxylic acid, organic acid and amino acid. The
CC   second spacer is positioned between the second inverse repeat arm and the
CC   quenchable fluorescing agent which comprises a semiconductor nanocrystal
CC   or rhodamine B-labelled dye. Within the microarray the support is capable
CC   of accepting a charge. At least one hairpin sensor comprises two or more
CC   hairpin sensors. The two or more hairpin sensors include complementary
CC   probes that are the same or different and respective quenchable
CC   fluorescing agents that are the same or different. The two or more
CC   hairpin sensors are arranged in a spatially-defined pattern. The sensor
CC   and system are useful for detecting a target nucleotide sequence in a
CC   sample. Further, the method involves identifying the target nucleotide
CC   sequence by the location of the complementary probe to which the target
CC   nucleotide sequence binds. The two or more hairpin sensors include
CC   complementary probes or quenchable fluorescing agents, that are
CC   different. The sequence presented is the hairpin oligonucleotide target
CC   sequence, #1, used in an example of the invention.

PT   Method of inhibiting expression of genes or RNA transcripts, useful for
PT   therapy and determining effects of genes, by administering oligomers
PT   containing hydroxyproline nucleic acid.
XX
PS   Example 20; Page 234; 240pp; English.
XX
CC   The invention relates to a novel method of inhibiting the expression of
CC   one or more genes or RNA transcripts by administering at least one
CC   oligonucleotide analogue that includes at least one hydroxyproline
CC   nucleic acid (HypNA) monomer to a cell or organism or their extracts. Thr
CC   oligonucleotides of the invention may be used to monitor properties
CC   including gene expression, respiration, secretion, signalling, ion-
CC   channel activity, cell motility, developmental phenotype and tumour
CC   regression. Furthermore, they may be utilised to determine the effects of
CC   particular genes, as antisense or homologous recombination constructs
CC   e.g. for creating animal models of disease and finally, for increasing
CC   the activity of some enzymes, such as polymerases. The current sequence
CC   is that of the single-base mismatch oligonucleotide SEQ ID 10 DNA of the
CC   invention. This sequence may also comprise a peptide nucleic acid (PNA),
CC   a phosphono-PNA (pPNA) or a HypNA.

PT   Annealing control primer to improve annealing specificity in nucleic acid
PT   amplification, has region complementary to target, arbitrary nucleotide
PT   sequence, regulator with universal base/non-discriminatory base analog.
XX
PS   Example 2; SEQ ID NO 54; 190pp; English.
XX
CC   The present invention describes an annealing control primer (ACP) (I) for
CC   improving the annealing specificity in nucleic acid amplification. (I)
CC   has a 3'-end portion with a nucleotide sequence complementary to a site
CC   on a template nucleic acid for hybridisation, a 5'-end portion having a
CC   pre-selected arbitrary nucleotide sequence, and a regulator portion
CC   between the 3' and 5'-end portions, comprising a universal or non-
CC   discriminatory base analogue, where the regulator portion is capable of
CC   regulating an annealing portion of the primer in association with
CC   annealing temperature. (I) is useful for improving annealing specificity
CC   in nucleic acid amplification. (I) is useful for amplifying a nucleic
CC   acid sequence from a DNA or a mixture of nucleic acids, for selectively
CC   amplifying a target nucleic acid sequence from a DNA, and for selectively
CC   amplifying a target nucleic acid sequence from a mRNA, by reverse
CC   transcribing the mRNA and performing an amplification reaction using (I).
CC   (I) is also useful for detecting DNA complementary to differentially
CC   expressed mRNA in two or more nucleic acid samples, by reverse
CC   transcribing the mRNA and performing an amplification reaction using (I).
CC   (I) is also useful for rapidly amplifying a target cDNA fragment
CC   comprising a cDNA region corresponding to the 3'-end or 5'-end region of
CC   an mRNA, for amplifying a population of full-length double-stranded cDNAs
CC   complementary to mRNAs, and amplifying 5'-enriched double-stranded cDNAs
CC   complementary to mRNA. (I) is also useful for amplifying more than one
CC   target nucleotide sequence simultaneously using more than one pair of
CC   primers in the same reaction, where the primers are derived from (I), for
CC   producing a DNA fingerprint of genomic DNA (gDNA), for producing a RNA
CC   fingerprint of an mRNA sample, identifying conserved homology segments in
CC   a multigene family from an mRNA sample, and for identifying conserved
CC   homology segments in a multigene family from gDNA. (I) is also useful for
CC   identifying a nucleotide variation in a target nucleic acid, and for
CC   mutagenesis in a target nucleic acid. The present sequence represents a
CC   primer which is used in the exemplification of the present invention.

PT Recombinant jungle red fowl (Gallus gallus) heparanase protein, useful
PT for treating cancers, microbial infections and aiding wound healing.
XX
PS Example; Page 13; 0pp; English.
XX
CC The present invention relates to novel jungle red fowl heparanase protein
CC and polynucleotides encoding such proteins. Heparanase sequences can be
CC used to develop treatments for various diseases, to develop diagnostic
CC assays for these diseases and to provide new tools for basic and directed
CC research especially in the fields of medicine and biology. They can be
CC used to develop new drugs to inhibit tumour cell metastasis, inflammation
CC and autoimmunity. Recombinant heparanase offers a potential treatment for
CC wound healing, angiogenesis, restenosis, atherosclerosis, inflammation,
CC neurodegenerative diseases (e.g. Genstmann-Straussler Syndrome, Scrape,
CC Creutzfeldt-Jakob disease and Alzheimer's disease) and certain viral and
CC some bacterial and protozoa infections. Recombinant heparanase can also
CC be used to neutralise plasma heparin, as a potential replacement of
CC protamine. Sequences of the invention are used in protein therapy. The
CC present sequence is chicken heparanase DNA specific PCR primer used in
CC the exemplification of the invention

PT Repairing mutated exons in pre-mRNA, useful e.g. for treatment of tumors,
PT by expressing, in a cell, repair DNA that replaces mutated exon by trans-
PT splicing.
XX
PS Disclosure; Fig R; 114pp; German.
XX
CC This invention describes a novel method of repairing a mutated exon (mE)
CC in the pre-mRNA of a mammalian cell. The method comprises introducing
CC into the cell a DNA (I) that encodes repair RNA (II) in the form of a pre
CC -mRNA (III) comprises a non-mutated exon (nmE) with at least one flanking
CC outron so that mE is exchanged for nmE, via RNA trans-splicing, using
CC splice components naturally present in the cell. The invention also
CC discloses DNA, encoding trans-splicing RNA that comprises an origin of
CC replication, an RNA polymerase-II promoter and a 3'-terminal signal for
CC polyadenylation of pre-mRNA, selective killing of tumour cells in a cell
CC population, identifying potential trans-splicing sites in cellular pre-
CC mRNA and subsequent identification of natural, cellular trans-spliced RNA
CC and identifying trans-splicing sites in cellular mRNA. The nucleic acid
CC of the invention produces a repair RNA containing a 5'-outron and/or 3'-
CC outron with at least 10 nucleotides (nt). Each outron has at least one
CC antisense sequence that pairs, in antisense, over a length of at least 18
CC bases to mE and/or to an intron region that flanks mE. Especially the
CC antisense part of the 5'-outron pairs to the intronic polypyrimidine
CC sequence of a 3'-splice site in mE, while that of the 3'-outron pairs to
CC the intronic sequence of a 5'-splice site. Especially the 5'-outron
CC comprises a branch-A site, a polypyrimidine stretch and an AG
CC dinucleotide at the border of the repair exon, while the 3'-outron
CC includes a GU dinucleotide at the border of this exon. The repair exon
CC comprises, apart from the wild-type sequence, a 3-mer, 3'-sequence as
CC exonic splice site, provided that the exon follows an outron, optionally
CC also an exonic splice enhancer site which does not introduce
CC additional/altered amino acids. Alternatively, the nucleic acid encodes a
CC truncated cell-death pre-mRNA that includes a frame shift sequence (up to
CC nt) at the 5'-end, also a recognition site for a cellular protease; it
CC then has a 5'-outron that hybridises to specific tumour cell pre-mRNA or
CC it is a probe pre-mRNA of 150-250 nt, if no protein-encoding sequences
CC are present in the exon, or several hundred nt if such sequences are
CC present. It also includes a single 5'- or 3'-splice site and,
CC accordingly, an exon or outron, where the outron includes a sequence of
CC 12-18 uracils and an 8-12-mer recognition/cleavage site for a restriction
CC enzyme. The trans-spliced RNA is amplified by cDNA-PCR (polymerase chain
CC reaction), and the products sequenced in the region that represents the
CC unknown cellular RNA. Further PCR analysis is performed using primers
CC that hybridise to two, predetermined, previously sequenced, exonic
CC fragments of the two trans-spliced RNAs. Natural cellular trans-spliced
CC RNAs are identified by PCR analysis if two specific trans-spliceable
CC cellular RNAs form, in vivo , a detectable trans-spliced hybrid. The
CC primers used for analysis hybridise to previously sequenced exonic
CC fragments from the trans-spliced RNA probes. The method is used for
CC selective killing of tumour cells and for identifying potential trans-
CC splicing sites in cellular pre-mRNAs and subsequently, natural, cellular
CC trans-spliced mRNAs. The method can correct genetic defects that cause
CC disease.

PT Cleaving single-stranded nucleic acid sequences at a desired location by
PT contacting the nucleic acid with an single strand oligonucleotide
PT complementary to a nucleic acid region where cleavage is desired.
XX
PS Disclosure; Page 481; 485pp; English.
XX
CC The present invention describes a method for cleaving single-stranded
CC nucleic acid sequences at a desired location. Also described: (1) methods
CC for displaying or expressing a member of a diverse family of peptides,
CC polypeptides or proteins on the surface of a genetic package and
CC collectively displaying at least a part of the diversity of the family,
CC where the displayed or expressed peptide, polypeptide or protein is
CC encoded at least in part by a nucleic acid that has been cleaved at a
CC desired location; (2) a method for preparing single-stranded nucleic
CC acids; (3) a method for preparing a library comprising a collection of
CC genetic packages that display a member of a diverse family of peptides,
CC polypeptides or proteins and that collectively display at least a portion
CC of the family; (4) a vector comprising a DNA sequence encoding an
CC antibody variable region linked to a version of PIII anchor which does
CC not mediate infection of phage particles, and wild-type gene III; (5) a
CC method for producing a population or a library of immunoglobulin genes;
CC and (6) a library of immunoglobulins that comprise members having at
CC least one variable domain in which at least one of CDR1 and CDR2 contain
CC synthetic diversity and CDR3 diversity is captured from B cells. The
CC method is useful for cleaving single-stranded nucleic acid sequences at a
CC desired location, which can be subsequently used to produce libraries or
CC genetic packages that display and/or express a diverse family of
CC peptides, polypeptides or proteins. ABZ36912 to ABZ37510 and ABP55464 to
CC ABP55499 represent sequences used in the exemplification of the present
CC invention

PT   New annealing control primer capable of improving primer annealing
PT   specificity in association with the alteration of primer annealing
PT   temperature, useful for selectively amplifying a target nucleic acid
PT   sequence.
XX
PS   Example 2; SEQ ID NO 54; 137pp; English.
XX
CC   The invention relates to a novel annealing control primer (ACP) capable
CC   of improving primer annealing specificity in association with the
CC   alteration of primer annealing temperature comprising 3' and 5'-end
CC   portions separated by at least 2 deoxyinosine residues, universal bases
CC   or non-discriminatory base analogues. The annealing control primer of the
CC   invention may be useful for selectively amplifying a target nucleic acid
CC   sequence from a nucleic acid molecule or mixture of nucleic acids, for
CC   detecting DNA complementary to differentially expressed mRNA in two or
CC   more nucleic acid samples or for amplifying a population of full-length
CC   double-stranded cDNAs complementary to mRNAs using annealing control
CC   primers. The current sequence is that of the annealing control primer of
CC   the invention which was used to amplify a murine sequence.

PT   New nucleic acid molecule, useful for preparing a composition for
PT   diagnosing diseases caused by non-viral organisms, e.g., Acinetobacter
PT   baumannii, Bacteroides fragilis, Cardiobacterium hominis or Clostridium
PT   ramosum.
XX
PS   Example 8; SEQ ID NO 428; 135pp; English.
XX
CC   The invention relates to a novel detection method of non-viral organisms.
CC   The invention further relates to a novel isolated nucleic acid molecule
CC   which has a fully defined sequence comprising 1830-5502 bp. The detection
CC   method comprises a kit, which contains: a composition comprising the
CC   nucleic acid probe; a pair of forward and reverse primers used for
CC   amplifying the polynucleic acids in the biological sample; a buffer
CC   enabling hybridization reaction between the probes contained in the
```

CC composition and the polynucleic acids present in the biological sample or
CC their amplified products or components necessary for producing the buffer
CC ; a solution for washing hybrids; and optionally means for detection of
CC the hybrids. The novel nucleic acid is useful for preparing a composition
CC for diagnosing diseases caused by non-viral organisms, e.g.,
CC Acinetobacter baumannii, Anaerobiospirillum succiniciproducens,
CC Bacteroides fragilis, Cardiobacterium hominis, Chryseobacterium
CC meningosepticum, Clostridium ramosum, Corynebacterium diphtheriae,
CC Klebsiella oxytoca, Ochrobactrum anthropi, Peptostreptococcus prevotii,
CC Porphyromonas gingivalis, Peptostreptococcus anaerobius,
CC Peptostreptococcus magnus, Fusobacterium necrophorum, Proteus vulgaris,
CC Enterobacter aerogenes, Streptococcus mutans, Kingella kingap,
CC Bacteroides ovatus, Bacteroides thetaiotaomicron, Clostridium diffcile,
CC Hemophilus aphrophilas, Neiserria gonorrhea, Eikenella corrodens,
CC Bacteroides vulgatus, Branhamella catarrhalis, Sutterella wadsworthensis,
CC Actinomyces israelii, Staphylococcus epidermidis, Burkholderia cepacia,
CC Salmonella enteritidis, Escherichia coli, Klebsiella pneumoniae, Proteus
CC mirabilis, Streptococcus pneumoniae, Vibrio vulnificus, Pseudomas
CC aeruginosa, Aeromonas hydrophila, Listeria monocytogenes, Enterococcus
CC faecium, Staphylococcus aureus, Neiserria meningitidis, Legionella
CC pneumophila, Candida albicans or Candida glabrata. These non-viral
CC organisms can cause, but are not limited to, disorders such as: purulent
CC infection, bacteraemia, meningitis, endocarditis, neonatal meningitis,
CC inflammatory intestinal diseases, endocarditis, respiratory diphtheria,
CC pneumonia, abscesses, oral infection, festering nasopharyngitis, mouth
CC infection, urinary track infection, deep infection, arthritis, enteritis,
CC diarrhoea, localised brain or respiratory infection, male reproductive
CC disorder, bite wounds, otitis media, acute appendicitis, aphtha, and
CC mycosis. This polynucleotide sequence represents a primer used in the
CC exemplification of the invention.

PT Amplifying for RNA in a sample, useful for improving RNA polymerase based
PT RNA transcription from a polynucleotide template, comprises eliminating
PT single-stranded oligonucleotide from the transcription sample.
XX
PS Example 1; SEQ ID NO 5; 26pp; English.
XX
CC The invention relates to amplifying for RNA in a sample comprises
CC eliminating single-stranded oligonucleotide from the transcription
CC sample. The method involves synthesizing single-stranded cDNA by
CC incubating the sample RNA with reverse transcriptase and an
CC oligonucleotide primer that primes synthesis in a direction toward 5' end
CC of the RNA; converting the single-stranded cDNA into double-stranded cDNA
CC to form a transcription sample containing a cDNA template; eliminating
CC single-stranded oligonucleotide from the transcription sample; and
CC transcribing the cDNA template into RNA using an RNA polymerase. The
CC method is useful for improving RNA polymerase based RNA transcription
CC from a polynucleotide template. The method inhibits the undesired non-
CC template derived production of RNA in the transcription reaction.
CC Sequences ADI34483-ADI34489 represent oligonucleotides used in a T7 RNA
CC transcription reaction.

PT New antisense oligonucleotide hybridizable with a polynucleotide encoding
PT a polypeptide with heparanase activity, useful for treating diseases such
PT as cancer and autoimmune disorders.
XX
PS Example; SEQ ID NO 5; 108pp; English.
XX
CC The invention relates to an antisense oligonucleotide (ASO) comprising a
CC polynucleotide or a polynucleotide analogue of at least 10 bases being
CC hybridisable in vivo , under physiological conditions, with a portion of
CC a polynucleotide strand encoding a polypeptide having heparanase
CC catalytic activity. Also included are a method of in vivo downregulating
CC heparanase activity (comprising administering the ASO in vivo), a method

```
CC   of treating a subject suffering from a pathological condition
CC   (characterised by heparanase activity, comprising administering ASO to
CC   the subject), a pharmaceutical composition comprising the ASO and a
CC   carrier, an antisense nucleic acid construct (comprising a promoter
CC   sequence and a polynucleotide sequence directing the synthesis of an
CC   antisense RNA sequence of at least 10 bases being hybridisable in vivo ,
CC   under physiological conditions, with a polynucleotide strand encoding a
CC   polypeptide having heparanase catalytic activity), a method of in vivo
CC   downregulating heparanase activity (comprising administering in vivo the
CC   antisense nucleic acid construct), a pharmaceutical composition
CC   comprising the antisense nucleic acid construct and a carrier, and an
CC   antisense oligonucleotide comprising a polynucleotide or a polynucleotide
CC   analogue of at least 10 bases being hybridisable in vivo , under
CC   physiological conditions, with a portion of a polynucleotide strand being
CC   characterised by forming at least a portion of an untranslated region
CC   (UTR) for a polynucleotide strand encoding a polypeptide having
CC   heparanase catalytic activity. The methods and compositions of the
CC   present invention are useful for the prevention and/or treatment of
CC   diseases or conditions associated with aberrant heparanase activity, such
CC   as heparanase-dependent cancer, cancer, autoimmune reaction and
CC   inflammation. The present sequence is a PCR primer used in the isolation
CC   of human heparanase cDNA.

PT   New transgenic non-human animal expressing heparinase, useful as models
PT   for human disease, such as cancers, viral infection, neurodegenerative
PT   diseases, restenosis, atherosclerosis and pulmonary disorders.
XX
PS   Example; SEQ ID NO 5; 106pp; English.
XX
CC   The present invention relates to a transgenic non-human animal whose
CC   genome comprises an exogenous polynucleotide sequence, including a
CC   promoter active in tissues of the non-human, a region encoding a human
CC   heparanase, where the promoter and the region encoding human heparanase
CC   are operably linked in the exogenous polynucleotide such that human
CC   heparanase is expressed in at least a portion of the cells of the non-
CC   human animal. The methods and compositions of the present invention are
CC   useful for the production of transgenic animals expressing heparanase, to
CC   be used as models for human diseases such as cancers, viral infection,
CC   restenosis, neurodegenerative diseases, atherosclerosis and pulmonary
CC   disorders. The present sequence is human hp3 DNA amplifying (reverse
CC   transcription) RT-PCR primer used in the exemplification of the
CC   invention.

PT Detecting and/or isolating nucleic acid molecule having homopolymeric
PT sequence or repetitive element or conserved nucleotide sequence involves
PT treating sample containing nucleic acid compounds with locked nucleic
PT acid oligonucleotide.
XX
PS Disclosure; Page 17; 104pp; English.
XX
CC The present invention relates to a method (M1) for detecting and/or
CC isolating a nucleic acid having a homopolymeric sequence or repetitive
CC element or conserved nucleotide sequence. (M1) comprises treating a
CC sample containing nucleic acid compounds with an locked nucleic acid
CC (LNA) oligonucleotide (LO) to thereby detect and/or isolate a nucleic
CC acid having the homopolymeric sequence or repetitive element or conserved
CC nucleotide sequence. (M1) is useful for detecting and isolating nucleic
CC acids released from a lysed complex biological mixture comprising nucleic
CC acids. The present sequence is a LNA oligomer, used to illustrate the
CC invention.

PT length of amplicons.
XX
PS Example 3; Page 31; 64pp; German.
XX
CC The invention describes a method of typing (M1) a gene (I) that has one
CC or more polymorphic microsatellite loci (PML). The method comprises: PCR
CC amplification of at least one DNA region of (I) that includes PML, using
CC as template a DNA sample containing at least one segment of (I); and
CC determining the length of the resulting amplicon(s). Also described are:
CC a method of determining (M2) microsatellite markers (MM) for
CC predisposition to a disease, associated with a gene that includes one or
CC more PML; and prediagnosis (M3) of diseases associated with gene that
CC include PML. The method is used to identify microsatellite markers, in a
CC disease-related gene, that are associated with a predisposition to
CC diseases and for prediagnosis of such diseases, especially prion diseases
CC but also cystic fibrosis, malignant hyperthermia syndrome in pigs and
CC metabolic diseases; also to type genes that encode milk proteins,
CC hormones or transcription factors. The method is simpler, quicker and
CC particularly less expensive than known methods based on sequencing. This
CC sequence represents a primer used to genotype a region of the sheep prion
CC protein (PrP) comprising a polymorphic microsatellite locus.

PT   Synthesis of oligonucleotides in nucleotide chemistry involves providing
PT   solid support of anchor group protected by orthogonal protective group,
PT   removing the protective group, synthesizing an oligonucleotide followed
PT   by capping and cleaving.
XX
PS   Example 9; SEQ ID NO 13; 77pp; English.
XX
CC   The present invention relates to a method for the synthesis of at least
CC   two different oligonucleotides, which involves providing a solid support
CC   comprising anchor groups that are protected by at least two orthogonal
CC   protective groups, removing one of the protective groups from the anchor
CC   groups, synthesizing an oligonucleotide on the deprotected anchor groups,
CC   capping the synthesized oligonucleotide, repeating these steps until all
CC   of anchor groups are deprotected, and cleaving the synthesized
CC   oligonucleotides. The method can be used for the synthesis of at least
CC   two different oligonucleotides, in the field of nucleotide chemistry, in
CC   applying the required pairs of oligonucleotide primers, several probes at
CC   a time, duplexed nuclei acid fragments (including PCR, sequencing,
CC   multiplexed genotyping, cloning and RNA interference), for applying to
CC   any known methods for the solid phase synthesis of oligonucleotides
CC   (including phosphoramidite chemistry, H-phosphonate chemistry,
CC   phosphotriester chemistry, or any other synthetic chemistry used to
CC   prepare oligonucleotides on solid supports). The present sequence is a
CC   polynucleotide used to demonstrate the method of the invention.

CC   The sequence is that of the 3' end of a sequence encoding a secreted
CC   protein from a human fetal kidney clone AK296. Such a sequence is
CC   predicted to have biological activities which would make them suitable
CC   for treating, preventing or ameliorating medical conditions in humans and
CC   animals, although no supporting data is given. Suggested activities
CC   include nutritional activity, cytokine and cell
CC   proliferation/differentiation activity, immune stimulating (e.g. as
CC   vaccines) or suppressing activity, haematopoiesis regulating activity,
CC   tissue growth activity, activin/inhibin activity,
CC   chemotactic/chemokinetic activity, haemostatic and thrombolytic activity,
CC   receptor/ligand activity, anti-inflammatory activity, cadherin/tumour
CC   invasion suppressor activity, and tumour inhibition activity. It is also
CC   stated to be useful for gene therapy

PT   New nucleoside derivatives with photolabile protecting groups, useful in
PT   oligonucleotide synthesis, particularly on solid phases, e.g. for
PT   hybridization testing.
XX
PS   Disclosure; Fig 9; 48pp; German.
XX
CC   This invention describes nucleoside derivatives (I) with photolabile
CC   protecting groups. (I) are used to synthesize oligonucleotides using the
CC   photolithographic nucleic acid chip method, particularly where these are
CC   intended for performing enzymatic reactions initiated from a free 3'-
CC   hydroxy (especially solid-phase polymerase reactions or ligase reactions,
CC   but also reverse transcription, cDNA synthesis etc.), also for
CC   hybridization testing, sequencing and in DNA computing. (I) are produced
CC   with high selectivity by reaction with a mild acylating agent that has
CC   high specificity for the 3'-position, without significant side-reactions
CC   (cf. more reactive acylating agents such as chloroformates)

PT   Conjugate of oligonucleotide, minor groove binder and latent fluorophore,
PT   useful for detecting specific nucleic acids, e.g. for single-nucleotide
PT   mismatch discrimination.
XX
PS   Disclosure; Page 101; 105pp; English.
XX
CC   The present sequence is that of an oligonucleotide (ODN)-minor groove
CC   binder (MGF) complex. MGBs bind in a non-intercalating manner to the
CC   minor groove of non-single-stranded DNA, RNA or their hybrids. ODN-MGB-LF
CC   conjugates of the invention also comprise a latent fluorophore (LF),
CC   which binds similarly to the MGB but in an intercalating manner, or lies
CC   in the minor groove, or is oriented in some other way to the DNA molecule
CC   by MGB, such that it becomes fluorescent (or its fluorescent properties
CC   change detectably). The conjugates are used as hybridisation probes and
CC   amplification primers for fluorescent detection of specifically
CC   hybridising sequences, for analysis or diagnosis, especially (real-time)
CC   PCR, for single-nucleotide mismatch discrimination, target or signal
CC   amplification, array-based assays and sequencing, including detection of
CC   double-stranded DNA by triplex formation

PT   Conjugate of oligonucleotide, minor groove binder and latent fluorophore,
PT   useful for detecting specific nucleic acids, e.g. for single-nucleotide
PT   mismatch discrimination.
XX
PS   Disclosure; Page 58; 105pp; English.
XX
CC   The present sequence is that of the oligonucleotide (ODN) component of an
CC   ODN-MGB (minor groove binder)-LF (latent fluorophore) conjugate of the
CC   invention. MGBs bind in a non-intercalating manner to the minor groove of
CC   non-single-stranded DNA, RNA or their hybrids, while a LF binds similarly
CC   but in an intercalating manner, or lies in the minor groove, or is
CC   oriented in some other way to the DNA molecule by MGB, such that it
CC   becomes fluorescent (or its fluorescent properties change detectably).
CC   The conjugates are used as hybridisation probes and amplification primers
CC   for fluorescent detection of specifically hybridising sequences, for
CC   analysis or diagnosis, especially (real-time) PCR, for single-nucleotide
CC   mismatch discrimination, target or signal amplification, array-based
CC   assays and sequencing, including detection of double-stranded DNA by
CC   triplex formation. Many different targets can be detected a single
CC   reaction vessel. The present ODN-MGB-LF conjugate was used to demonstrate
CC   hybridisation-triggered fluorescence. Upon hybridisation to the
CC   complementary target sequence there was an increase in fluorescence
CC   yield, measured as the ratio of the fluorescence emitted by the hybrid
CC   between the ODN-MGB-LF conjugate and its target sequence to the
CC   fluorescence emitted by unhybridised (i.e. single-stranded) ODN-MGB-LF,
CC   of 8.3

PT   Sensitively detecting proximity changes in a system that utilizes an
PT   interacting fluorophore and quencher, for high sensitivity applications,
PT   involves utilizing a metal surface as quencher.
XX
PS   Example 3; Page 30; 62pp; English.
XX
CC   The present sequence is that of a perfectly matched target sequence for a
CC   molecular beacon comprising an oligonucleotide probe (see ABL57069)
CC   covalently attached at the 3' end to fluorescent dye and at the 5' end to
CC   a nanoparticle. In the native state, the probe forms a hairpin
CC   conformation with hybridised termini. The proximity of the fluorophore
CC   and quencher (gold nanoparticle) in the molecular beacon results in
CC   little or no detectable fluorescence. Upon hybridisation of the central
CC   complementary stretch of the probe to a target sequence, such as the
CC   present sequence, the hairpin undergoes a conformational change resulting
CC   in an increase in fluorescence, the extent of which is proportional to
CC   the amount of target sequence present. Single mismatches can be detected.
CC   The invention relates generally to the use of metal surface quenchers
CC   such as particles or films for high sensitivity applications in, for
CC   example, detection and diagnostic systems

PT   Oligonucleotides analogs useful in detection, separation and purification
PT   of nucleic acid molecules, comprise monomers, dimers and oligomers.
XX
PS   Example 17; Page 118; 197pp; English.
XX
CC   This invention relates to oligonucleotide analogues comprising a protein
CC   nucleic acid molecule (PNA) monomer. They are used in the detection and
CC   separation of nucleic acid molecules and as probes, primers, linkers,
CC   adapters and antisense agents on solid supports. Modifications enhance
CC   their use as capture and detection probes e.g. by the incorporation of
CC   biotin, digoxigenen, radioisotopes, fluorescent labels such as
CC   fluorescein and reporter molecules such as alkaline phosphatase. They are
CC   also used for enhancing or inhibiting the activity of an enzyme or
CC   cellular activity. The compounds are stable to nucleases and proteases,
CC   have high affinity, binding specificity and solubility. The polyamide
CC   backbone of PNAs is resistant to both nucleases and proteases. PNAs bind
CC   nucleic acid molecules with greater affinity than DNA or RNA
CC   concentration. The compounds are relatively simple to synthesize and are
CC   used in a wide variety of applications. This sequence represents a DNA
CC   oligomer which is used to represent the thermal stability of the
CC   oligomers of the invention

PT   Novel human cervical cancer 2 protooncogene protein and polynucleotide
PT   encoding it useful for diagnosing various cancers e.g. leukemia, lymphoma
PT   or uterine cervix cancer, and for producing transformed animals.
XX
PS   Disclosure; Page 47; 49pp; English.
XX
CC   The invention discloses a human cervical cancer 2 (HCCR-2) protooncogene
CC   and encoded protein. The protooncogene was discovered using mRNA
CC   differential display, identifying it as being amplified in cancer cells
CC   and, more specifically, involved in the tumourigenesis of cervical
CC   cancer. HCCR-2 is useful for preventing, diagnosing or treating cancer,
CC   including leukaemia, lymphoma, colon, breast, kidney, stomach, lung,
CC   ovary or uterine cervix cancer. HCCR-2 is also useful for producing
CC   antibodies which are useful as diagnostic tools. HCCR-2 protooncogene is
CC   useful in the diagnosis of various cancers, in antisense gene therapy and
CC   for producing transformed animals which are useful in screening for
CC   carcinogens or anticancer agents, such as antioxidants. The protooncogene
CC   is also useful for establishing a continuous viable cancer cell line
CC   which is useful in searching for anticancer agents. The sequence
CC   presented is the anchored oligo-dT primer, H-T11G, which was used to
CC   amplify cDNA for differential display. This technique identified a cDNA
CC   fragment, designated CC214, which was then used as a probe to isolate the
CC   full length cDNA (cervical cancer 2 (HCCR-2) protooncogene) from a human
CC   lung embryonic fibroblast cDNA library

PT   Novel acyclic linker-containing oligonucleotide useful for preventing or
PT   decreasing translation, reverse transcription and/or replication of a
PT   target RNA in a system, comprises a modified deoxyribonucleotide.
XX
PS   Example 2; Fig 7; 104pp; English.
XX
CC   The invention relates to an acyclic linker-containing oligonucleotide
CC   comprising at least one modified deoxyribonucleotide. Oligonucleotides of
CC   the invention are useful for preventing or decreasing translation,
CC   reverse transcription and/or replication of a target RNA in a system.
CC   They are useful for selectively preventing gene expression in a sequence-
CC   specific manner, for hybridising to complementary RNA such as cellular
CC   mRNA or viral RNA, to hybridise to and induce cleavage of complementary
CC   RNA. They are also useful therapeutically in formulations or medicaments
CC   to prevent or treat a disease characterised by the expression of a
CC   particular target RNA. The invention is used in gene therapy. The present
CC   sequence is an antisense oligo used to elicit human RNase (ribonuclease)
CC   H degradation of target RNA. This sequence is used in the exemplification
CC   of the invention

PT   Detecting polynucleotides, for pharmacogenetic testing, comprises
PT   contacting a target polynucleotide with a complementary single-stranded
PT   sensor polynucleotide and an agent that allows the sensor to fluoresce
PT   upon excitation.
XX
PS   Example 1; Page 25; 41pp; English.
XX
CC   The invention relates to a novel assay for detecting a polynucleotide in
CC   a sample, which comprises: contacting a sample suspected of containing a
CC   target polynucleotide with a predetermined single-stranded sensor
CC   polynucleotide complementary to the target polynucleotide, in a solution
CC   comprising an agent that is a nonaqueous solvent that allows the sensor
CC   polynucleotide to produce a detectable fluorescence emission; exciting
CC   the sensor polynucleotide; and determining fluorescence emission. The
CC   assay is useful for detecting a single or double-stranded target
CC   polynucleotide, such as, DNA or RNA in a sample. The assay finds use in a
CC   wide variety of different applications including pharmacogenetic testing,
CC   forensic testing to identify the species or individual which was the
CC   source of a forensic specimen, in anthropological setting, paternity
CC   testing, testing for compatibility between prospective tissue or blood
CC   donors and patients and in screening for hereditary disorders. The method
CC   is also useful to study alterations of gene expression in response to a
CC   stimulus, disease, drug or medication, and other applications include
CC   human population genetics, analyses of human evolutionary history and
CC   characterisation of human haplotype diversity. The method is useful for
CC   detecting polynucleotide sequences from contaminants or pathogens
CC   including bacteria, yeast, and viruses to detect single nucleotide
CC   polymorphisms, which may be associated with particular alleles or subsets
CC   of alleles. The method is useful for detection of mutations and to detect
CC   nucleotide sequences associated with increased risk of diseases or
CC   disorders including cystic fibrosis, Tay-Sachs, and sickle-cell anaemia.
CC   This polynucleotide sequence represents an oligonucleotide sequence used
CC   in a fluorescence technique of the invention

XX
CC   The invention relates to a novel method of inhibiting the expression of
CC   one or more genes or RNA transcripts by administering at least one
CC   oligonucleotide analogue that includes at least one hydroxyproline
CC   nucleic acid (HypNA) monomer to a cell or organism or their extracts. Thr
CC   oligonucleotides of the invention may be used to monitor properties
CC   including gene expression, respiration, secretion, signalling, ion-
CC   channel activity, cell motility, developmental phenotype and tumour
CC   regression. Furthermore, they may be utilised to determine the effects of
CC   particular genes, as antisense or homologous recombination constructs
CC   e.g. for creating animal models of disease and finally, for increasing
CC   the activity of some enzymes, such as polymerases. The current sequence
CC   is that of the PNA-HypNA hybridisation oligomer of the invention. This
CC   sequence may also comprise phosphono-PNA (pPNA) and serine nucleic acid
CC   (SerNA) components.

PT   Screening of candidate binding partners for binding to test molecule
PT   comprises illuminating sample with light beams and measuring physical
PT   properties of nonlinear optical light beam emanating from sample.
XX
PS   Disclosure; SEQ ID NO 2; 58pp; English.
XX
CC   The invention describes screening a candidate binding partner by
CC   illuminating the sample with light beams at fundamental frequencies to
CC   binding partners, and measuring physical properties of a nonlinear
CC   optical light beam emanating from sample. On binding to the test molecule
CC   the properties change relative to that in absence of exposure of the test
CC   molecule. The invention is used in the screening of candidate binding
CC   partners for binding to test molecule. This sequence represents a
CC   molecular beacon analogue, an exemplary test molecule of the invention.

PT   Amplifying for RNA in a sample, useful for improving RNA polymerase based
PT   RNA transcription from a polynucleotide template, comprises eliminating
PT   single-stranded oligonucleotide from the transcription sample.
XX
PS   Example 1; SEQ ID NO 6; 26pp; English.
XX
CC   The invention relates to amplifying for RNA in a sample comprises
CC   eliminating single-stranded oligonucleotide from the transcription
CC   sample. The method involves synthesizing single-stranded cDNA by
CC   incubating the sample RNA with reverse transcriptase and an
CC   oligonucleotide primer that primes synthesis in a direction toward 5' end
CC   of the RNA; converting the single-stranded cDNA into double-stranded cDNA
CC   to form a transcription sample containing a cDNA template; eliminating
CC   single-stranded oligonucleotide from the transcription sample; and
CC   transcribing the cDNA template into RNA using an RNA polymerase. The
CC   method is useful for improving RNA polymerase based RNA transcription
CC   from a polynucleotide template. The method inhibits the undesired non-
CC   template derived production of RNA in the transcription reaction.
CC   Sequences ADI34483-ADI34489 represent oligonucleotides used in a T7 RNA
CC   transcription reaction.

CC   This sequence represents a primer of the invention. The invention relates
CC   to sequences of at least two nucleotides of formula: (X)m5'-(alpha)n-beta
CC   -N3'; or (X)m5'-(gamma)k-delta-N3'; where X = a labelled compound and/or
CC   a nucleotide with voluntary sequence; m = 0 or 1; alpha = thymine; n =
CC   natural number indicating the repetition of alpha; beta, delta = V or N;
CC   V = adenine, guanine or cytosine; N = adenine, guanine, cytosine or
CC   thymine; gamma = thymine; k = natural number of 3 or over indicating the
```

```
CC   repetition of gamma, in which thymine expressed by gamma is composed of
CC   1/3 or less of adenine, guanine and/or cytosine. The new nucleotides are
CC   useful as primers for RT-PCR and determination of base sequences. The new
CC   sequences allow for reproductive and highly efficient analysis of gene
CC   sequences

CC   This sequence represents a primer of the invention. The invention relates
CC   to sequences of at least two nucleotides of formula: (X)m5'-(alpha)n-beta
CC   -N3'; or (X)m5'-(gamma)k-delta-N3'; where X = a labelled compound and/or
CC   a nucleotide with voluntary sequence; m = 0 or 1; alpha = thymine; n =
CC   natural number indicating the repetition of alpha; beta, delta = V or N;
CC   V = adenine, guanine or cytosine; N = adenine, guanine, cytosine or
CC   thymine; gamma = thymine; k = natural number of 3 or over indicating the
CC   repetition of gamma, in which thymine expressed by gamma is composed of
CC   1/3 or less of adenine, guanine and/or cytosine. The new nucleotides are
CC   useful as primers for RT-PCR and determination of base sequences. The new
CC   sequences allow for reproductive and highly efficient analysis of gene
CC   sequences

PT Measuring expression of low abundance reduced complexity target nucleic
PT acid molecules.
XX
PS Example 3; Page 91; 187pp; English.
XX
CC AAZ36739-41 represent oligo(dT) primers used for modified differential
CC display, in the method of the invention. The specification describes a
CC method for measuring the level of two or more nucleic acid molecules in a
CC target. The method comprises contacting a probe with an arbitrarily or
CC statistically sampled target and detecting the amount of specific binding
CC of the target to the probe. The methods can be used to identify
CC differentially expressed nucleic acid molecules associated with disease
CC states, such as cancer, autoimmune disease, infectious disease, aging,
CC developmental disorder, proliferative disorder or neurological disorder.
CC Alternatively the methods can be used to assess the efficacy or toxicity
CC of or a resistance to a treatment. Also the methods can be used to
CC determine differential expression of nucleic acid molecules in response
CC to a stimulus, e.g. a chemical, drug or growth factor (especially
CC epidermal growth factor), radiation, stress or a pathogen. The methods
CC can also be used to determine co-regulated genes that can be potential
CC targets for drug discovery

PS Claim 77; Page 79; 148pp; English.
XX
CC The present invention describes nucleic acids (A) that interact stably
CC with a target sequence and contain at least one phosphoro(di)thioate
CC link, having endonuclease activity. (A), and more generally any catalytic
CC nucleic acid (A') that modulates expression of the oestrogen receptor
CC gene, are used to treat cancer (particularly of breast or endometrium),
CC in vivo or by transforming cells ex vivo and implanting treated cells, or
CC for other conditions associated with levels of oestrogen receptor.
CC Because of the high selectivity for targeted RNA, (A) can also be used to
CC correlate inhibition of gene expression with alterations in phenotype,
CC particularly for identification of therapeutic targets, and as research
CC reagents (for RNA, in the same way that restriction endonucleases are
CC used with DNA). The combination of modifications in (A) improves
CC resistance to nucleases, binding affinity and/or activity. AAA23503 to

PT Retroviral expression vector, useful in gene therapy, contains a promoter
PT from a human endogenous retrovirus to provide cell-specific expression.
XX
PS Disclosure; Page 27; 67pp; German.
XX
CC This invention describes a novel retroviral expression vector (A)
CC containing DNA sequences (I) for packaging vector RNA and for cell-
CC specific expression of proteins or peptides encoding by heterologous DNA
CC (II). The sequences controlling cell-specific expression contain a cell-
CC specifically regulatable promoter region (P) from a human endogenous
CC retrovirus (HERV) DNA sequence. The invention also describes (a) mRNA and
CC RNA of (A); (b) prokaryotic and eukaryotic cells containing (A); (c)
CC eukaryotic cells containing (A) in integrated form; (d) virions
CC containing a retroviral expression vector RNA derived from (A); (e) a
CC method for producing the virions of (d); (f) a method for incorporating
CC protein-encoding nucleic acid sequences into a eukaryotic cell by
CC infection with the virions of (d); and (g) a retroviral vector system
CC containing (A) and a packaging cell line, that contains at least one
CC (recombinant) retrovirus construct that encodes for the packaging
CC proteins of (A). (A) are used for cell- or tissue-specific expression of
CC foreign genes for gene therapy and to produce virions for introducing
CC (II) into the chromosomal DNA of eukaryotic cells, preferably mammalian
CC and specifically human. (A) retain the advantages of usual retroviral
CC promoters with all the signal structures required for transcription in a
CC small region within the U3-R segment, but without their disadvantages
CC (excessive strength and limited cell specificity). Since (A) are derived
CC from endogenous (harmless) viral sequences, they do not introduce any new
CC viral sequences into the genome and recombination will not create new
CC types of retrovirus. The promoters provide cell or tissue specific
CC expression, according to which HERV they are derived from

PT Preparation of mixed backbone oligomeric compounds useful as e.g. primers
PT for diagnostic tests, involves oxidation of H-phosphonate internucleoside
PT linkages to phosphodiester internucleoside linkages.
XX
PS Example 12; Page 34; 49pp; English.
XX
CC The present sequence is that of a phosphorothioate oligonucleotide
CC containing 20 T nucleobases, each having a 2'-methoxyethoxy group on its
CC 5' ribosyl sugar moiety. It is an example of an oligomeric compound
CC produced according to the methods of the invention. The invention
CC provides compounds and methods for the preparation of mixed backbone
CC oligomeric, or chimeric, compounds having phosphodiester internucleoside
CC linkages in addition to phosphorothioate and/or phosphoramidate
CC internucleoside linkages. The methods also include incorporation of
CC boranophosphate internucleoside linkages. The methods utilise H-
CC phosphonate intermediates that are coupled together forming contiguous
CC regions of 1 or more H-phosphonate internucleoside linkages. Each
CC contiguous region is subsequently oxidized to phosphodiester,
CC phosphorothioate, phosphoramidate or boranophosphate internucleoside
CC linkages prior to further elongation. Mixed backbone oligomeric compounds
CC are prepared in this manner by oxidizing adjacent regions with different
CC reagents. Oligomeric compounds of the invention are prepared using novel
CC oxidation steps that oxidize a region of 1 or more H-phosphonate
CC internucleoside linkages without degrading existing linkages that have
CC been previously oxidized. The oligonucleotides obtained are useful as
CC primers in PCR, probes, linkers, gene fragments and for other diagnostic
CC tests on e.g. biological tissue, fluid, cells etc., as research reagents,
CC and as antiviral agents

PT Providing mRNA profile, by generating two independent patterns
PT characteristic of sample mRNA population, analyzing patterns, comparing
PT gene expression by cell types under varied conditions, and identifying
PT genes.
XX
PS Disclosure; Fig 2; 67pp; English.
XX
CC The present invention relates to a method for providing a profile of mRNA
CC molecules present in a sample. The method comprises generating two
CC independent patterns characteristic of the population of mRNA molecules
CC expressed in the sample and analysing the patterns using a combinatorial
CC algorithm, comparing gene expression by different or same cell types
CC under different conditions, and identifying genes having a role in
CC various cellular processes. The method is useful for the analysis and
CC identification of transcribed genes, and fingerprinting. The method can
CC be used to identify genes which play a role in determining various
CC cellular processes, including susceptibility to external factors,
CC development, and disease. The present sequence for a PCR primer is used
CC in the production of a single pattern characteristic of a sample,
CC employing a Type IIS restriction enzyme (i.e. FokI) in the methods of the
CC present invention

PT Novel polynucleotide which down regulates expression of Ets-related gene,

PT useful for treating cancer, diabetic retinopathy, macular degeneration,
PT arthritis, psoriasis, verruca vulgaris and Sturge Weber syndrome.
XX
PS Claim 4; Page 107; 149pp; English.
XX
CC The invention relates to a nucleic acid molecule (I) which down regulates
CC expression of an Ets-related gene (ERG). (I) is useful for treating
CC conditions selected from cancer, lymphoma, Ewing's sarcoma, melanoma,
CC tumour angiogenesis, diabetic retinopathy, macular degeneration,
CC neovascular glaucoma, myopic degeneration, arthritis, psoriasis, verruca
CC vulgaris, angiofibroma of tuberous sclerosis, port-wine stains, Sturge
CC Weber syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-rendu
CC syndrome, leukaemia, osteoporosis and wound healing. (I) is useful for
CC treating a patient having a condition associated with the level of ERG,
CC by contacting cells of the patient with (I) under conditions suitable for
CC the treatment. The method comprises the use of one or more therapies
CC under conditions suitable for the treatment. Leukaemia or tumour
CC angiogenesis is treated by administering (I) to the patient in
CC conjunction with one or more of other therapies such as radiation or
CC chemotherapy treatment. (I) is useful for reducing ERG activity in a
CC cell, by contacting the cell with (I). (I) is useful for cleaving RNA of
CC ERG gene, by contacting (I) with RNA, in the presence of a divalent
CC cation such as Mg2+. (I) is useful for diagnosis of conditions and
CC diseases related to the expression of ERG, and as diagnostic tool to
CC examine genetic drift and mutations within diseased cells or to detect
CC the presence of ERG RNA in a cell. (I) is useful for specifically
CC targeting genes that share homology with ERG gene or ERG fusion genes.
CC ABK17354-ABK22719 represent nucleic acids, including antisense and
CC enzymatic nucleic acid molecules which regulate expression of ERG, and

PT A triple-helix comprising a double helical nucleic acid (DHNA) and an
PT oligonucleotide which binds in parallel and antiparallel orientation,
PT respectively, for targetting sequences on alternate strands of DHNA to
PT control gene expression.
XX
PS Example 7; Fig 25A; 108pp; English.
XX
CC The present invention relates to methods and oligonucleotides for forming
CC a triple-helix comprising a double helical nucleic acid comprising first
CC and second substantially complementary strands, and an oligonucleotide
CC bound to a purine-rich target sequence within the double helical nucleic
CC acid, where the oligonucleotide binds in a parallel and antiparallel
CC orientation, respectively, to target sequences on alternate strands of
CC the double helical nucleic acid. The method has therapeutic applications,
CC where gene expression is controlled by selective triple-helix formation
CC within expression regulatory sequences of a target gene. The
CC oligonucleotides can be used to form triple-helices, and are useful to
CC detect the presence or absence of specific sequences within genomic DNA
CC for diagnostic and therapeutic purposes. The oligonucleotides can be
CC selected to specifically bind to pathogenic double-stranded DNA including
CC specific sequences required by pathogenic bacteria or viruses for
CC replication or virulence, reducing their pathogenicity. Alternatively,
CC the oligonucleotide can be chosen to target a unique sequence of the
CC pathogen which is not found in the genome of pathogen's host. The
CC oligonucleotides can be used in cancer treatment by way of triple-helix
CC suppression of specific oncogenes including those of endogenous or viral
CC origin. Such therapeutic oligonucleotides are capable of forming triple-
CC helices with such sequences in cancerous cells containing the activated
CC oncogene, so preferentially killing or repressing the cancer causing
CC cell. The present sequence represents an oligonucleotide used in the
CC methods of the present invention

XX
PT Identifying a candidate polymorphic repeat within a coding sequence, for
PT understanding or treating genetic disease, comprises detecting tandem
PT repeats in a target coding sequence and scoring the repeats for
PT polymorphic probability.
XX
PS Example; Col 483; 588pp; English.
XX
CC The invention discloses a method for identifying a candidate polymorphic
CC repeat within a coding sequence (expressed sequence tag, EST), which
CC comprises detecting tandem repeats in a target coding sequence, scoring
CC the repeats for polymorphic probability and generating a dataset
CC correlating the repeats with polymorphic probability to identify a
CC candidate polymorphic repeat. The computational methods (polymorphic
CC marker prediction of ubiquitous simple sequences, POMPOUS, and Rep-X) are
CC useful for identifying and detecting candidate polymorphic repeats in
CC human genes, which can be used to understand, treat or eliminate genetic
CC diseases, predispositions or adverse drug-treatment reactions. Examples
CC of diseases linked to nucleotide repeats are Machado-Joseph, Haw River
CC syndrome, Huntington's disease, fragile-X syndrome, Fredreich's ataxis,
CC myotonic dystrophy, hyperandrogenaemia, spinal and bulbar atrophy and
CC spinocerebellar ataxia. The sequences presented in ABX79676-ABX80022 are
CC the polymorphic repeats identified for a search of human ESTs

XX
PS Example 8; SEQ ID NO 5257; 103pp; English.
XX
CC The present invention relates to novel human zinc finger-containing
CC proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is
CC encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2,
CC MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome
CC 15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy,
CC or in manufacturing a medicament for treating or preventing a disorder
CC associated with decreased or increased expression or activity of MDZ3,
CC MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic
CC acids and proteins are also useful for diagnosing or monitoring a disease
CC caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic
CC acids can also be used as probes to detect and characterize gross
CC alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are
CC useful in constructing microarrays for measuring gene expression. The
CC proteins are useful as therapeutic agents for gene therapy or as
CC vaccines. The present sequence was used to illustrate the invention.

CC   The invention relates to an acyclic linker-containing oligonucleotide
CC   comprising at least one modified deoxyribonucleotide. Oligonucleotides of
CC   the invention are useful for preventing or decreasing translation,
CC   reverse transcription and/or replication of a target RNA in a system.
CC   They are useful for selectively preventing gene expression in a sequence-
CC   specific manner, for hybridising to complementary RNA such as cellular
CC   mRNA or viral RNA, to hybridise to and induce cleavage of complementary
CC   RNA. They are also useful therapeutically in formulations or medicaments
CC   to prevent or treat a disease characterised by the expression of a
CC   particular target RNA. The invention is used in gene therapy. The present
CC   sequence is an antisense oligo used to elicit human RNase (ribonuclease)
CC   H degradation of target RNA. This sequence is used in the exemplification
CC   of the invention

PT Determining polyadenylation sites within transcribed gene sequences
PT present in a sample comprises assigning to gene fragments gene candidates
PT within a database by comparing signals in the dataset with the database.
XX
PS Example; Fig 3; 81pp; English.
XX
CC The invention relates to determining the presence of and/or identifying a
CC polyadenylation site within a sequence of a transcribed gene or variants
CC present in a sample. The method involves assigning to gene fragments gene
CC candidates within a database by comparing signals in the dataset with the
CC database, the database comprising data representing mRNAs with known
CC polyA sites and/or 'virtual genes' representing a possible
CC polyadenylation site within an actual gene. The method is useful for
CC determining the presence of and/or identifying a polyadenylation site or
CC alternative polyadenylation sites within a sequence of a transcribed gene
CC or sequences of transcribed gene variants present or potentially present
CC in a sample, in identifying gene features, particularly in identifying
CC differences between sequence variants that occur in a population of
CC nucleic acid molecules, especially in identifying or discovering polyA
CC site usage or determining polyA site usage in a nucleic acid sample, and
CC gene variants arising from alternative polyA sites. The present sequence
CC represents a double stranded product DNA fragment

PT   Amplifying for RNA in a sample, useful for improving RNA polymerase based
PT   RNA transcription from a polynucleotide template, comprises eliminating
PT   single-stranded oligonucleotide from the transcription sample.
XX
PS   Example 1; SEQ ID NO 7; 26pp; English.
XX
CC   The invention relates to amplifying for RNA in a sample comprises
CC   eliminating single-stranded oligonucleotide from the transcription
CC   sample. The method involves synthesizing single-stranded cDNA by
CC   incubating the sample RNA with reverse transcriptase and an
CC   oligonucleotide primer that primes synthesis in a direction toward 5' end
CC   of the RNA; converting the single-stranded cDNA into double-stranded cDNA
CC   to form a transcription sample containing a cDNA template; eliminating
CC   single-stranded oligonucleotide from the transcription sample; and
CC   transcribing the cDNA template into RNA using an RNA polymerase. The
CC   method is useful for improving RNA polymerase based RNA transcription
CC   from a polynucleotide template. The method inhibits the undesired non-
CC   template derived production of RNA in the transcription reaction.
CC   Sequences ADI34483-ADI34489 represent oligonucleotides used in a T7 RNA
CC   transcription reaction.

PT   New oligonucleotides, useful for treating allergy or asthma, viral and
PT   bacterial infections, and cancer, e.g. biliary tract cancer, breast
PT   cancer, cervical cancer.
XX
PS   Example; SEQ ID NO 48; 104pp; English.
XX
CC   The invention relates to a class of CpG immunostimulatory
CC   oligonucleotides containing a 5'TCG motif or a CG at or the 5' end that
CC   are useful for stimulating an immune response. Oligonucleotides and
CC   compositions of the invention are useful for treating allergy or asthma,
CC   viral and bacterial infections and cancer e.g. biliary tract cancer,
CC   breast cancer, cervical cancer, choriocarcinoma, colon cancer,
CC   endometrial cancer, gastric cancer, lymphomas, intraepithelial neoplasms,
CC   liver cancer, lung cancer (e.g. small cell and non-small cell), melanoma,
CC   neuroblastomas, ovarian cancer, pancreatic cancer, prostate cancer,
CC   rectal cancer, sarcomas, thyroid cancer, renal cancer, bone cancer, brain
CC   and CNS cancer, connective tissue cancer, oesophageal cancer, eye cancer,
CC   Hodgkin's lymphoma, larynx cancer, oral cavity cancer, skin cancer,
CC   testicular cancer, as well as other carcinomas and sarcomas. The
CC   invention is also useful in gene therapy. The present sequence is a CpG
CC   immunostimulatory oligonucleotide (DNA-RNA hrbrid).

PT   New oligonucleotides, useful for treating allergy or asthma, viral and
PT   bacterial infections, and cancer, e.g. biliary tract cancer, breast
PT   cancer, cervical cancer.
XX
PS   Example; SEQ ID NO 54; 104pp; English.
XX
CC   The invention relates to a class of CpG immunostimulatory
CC   oligonucleotides containing a 5'TCG motif or a CG at or the 5' end that
CC   are useful for stimulating an immune response. Oligonucleotides and
CC   compositions of the invention are useful for treating allergy or asthma,
CC   viral and bacterial infections and cancer e.g. biliary tract cancer,
CC   breast cancer, cervical cancer, choriocarcinoma, colon cancer,
CC   endometrial cancer, gastric cancer, lymphomas, intraepithelial neoplasms,
CC   liver cancer, lung cancer (e.g. small cell and non-small cell), melanoma,
CC   neuroblastomas, ovarian cancer, pancreatic cancer, prostate cancer,
CC   rectal cancer, sarcomas, thyroid cancer, renal cancer, bone cancer, brain
CC   and CNS cancer, connective tissue cancer, oesophageal cancer, eye cancer,
CC   Hodgkin's lymphoma, larynx cancer, oral cavity cancer, skin cancer,
CC   testicular cancer, as well as other carcinomas and sarcomas. The
CC   invention is also useful in gene therapy. The present sequence is a CpG
CC   immunostimulatory oligonucleotide (DNA-RNA hrbrid).

PT Polymorphic bovine DNA markers - used in genetic identification, gene
PT mapping, and selective breeding.
XX
PS Table 7; Page 375; 517pp; English.
XX
CC The sequence is that of a bovine microsatellite sequence obtd. by
CC screening a library of bovine MboI DNA fragments of between 250 and 500
CC bp with an (AC)15 and a (TC)15 oligonucleotide probe. One out of 50
CC clones cross-hybridised. Assuming independent distribution of
CC microsatellites and MboI sites, the frequency of (T6)n >9 microsatellites
CC in the bovine genome is estimated at >100, 000. The sequence information
CC for ca. 230 such bovine microsatellites is summarised in the
CC specification and indexed herein (see below). The sequences upstream and
CC downstream of the microsatellite sequence were used to generate the
CC required PCR primers for in vitro amplification of the corresp.
CC microsatellite (using the program OPTIPRIM). The microsatellites may be
CC used to identify individuals, for parentage testing, and in the genetic
CC mapping of economic trait loci, or genes involved the determinism of
CC economically important traits esp. in cattle, to allow selective
CC breeding. See also AAQ33501-34437. (Updated on 25-MAR-2003 to correct PN
CC field.)

XX
PS Example; Page 12; 34pp; English.
XX
CC AAR62941 and AAR62942 are examples of synthetic immunoreactive peptides.
CC They are used in a method for detecting an antigen in a subject. The
CC method involves binding the antigen to a solid support and then reacting

```
CC   it with an immunoreactive ligand (L) bound to an oligo; removing any
CC   unreacted L, and then detecting the presence of the oligo. A similar
CC   method can be used to detect Abs, in which case the ligand is an oligo-
CC   labelled Ag. The use of an amplifiable oligo as the label allows Ag or Ab
CC   to be detected at very low levels. An exemplary olgi is AAQ75024 which
CC   can be covalently attached by the 5'- terminus to the N- or C-terminal of
CC   a synthetic peptide. In the example, peptide AAR62941 was coupled to
CC   oligo AAQ75024 using disuccinimidyl suberate. Serum samples suspected to
CC   contain HEV Abs were immobilised on plastic tubes or wells, then
CC   incubated for 30-60 mins with the peptide-oligo proruct. The vessels were
CC   washed; bound oligo was released with 0.2M glycine and amplified in a
CC   separate tube using as primers AAQ75025 and AAQ75026 in 30 cycles of PCR.
CC   The amplification product - AAQ75031 - was treated with uracil DNA
CC   glycoslase to remove the U18 fragment, and the product captured by
CC   immoblised oligo-dT. (Updated on 25-MAR-2003 to correct PN field.)

CC The present invention describes novel proteins isolated from cDNA clones:
CC AE648_1i; AE693_1i; AK438_1i; AK609_1i; AM1060_1i; AQ2_1i; K433_1i; or
CC L256_1i, deposited as ATCC 98237. The present sequence represents the 3'-
CC portion of AQ2_1i isolated from a human ovary cDNA library. The proteins
CC from the present invention may be administered in a composition to
CC prevent, treat or ameliorate a medical condition. The proteins may
CC exhibit biological activities such as nutritional activity, cytokine and
CC cell proliferation/differentiation activity, immune stimulating or
CC suppressing activity, haematopoiesis regulating activity, tissue growth
CC activity, activin/inhibin activity, chemotactic/chemokinetic activity,
CC haemostatic and thrombotic activity, receptor/ligand activity, anti-
CC inflammatory activity, cadherin/tumour invasion suppressor activity,
CC tumour inhibition activity and other activities. (Updated on 25-MAR-2003
CC to correct PR field.)

PT oligo:nucleotide(s) - resistant to nuclease and targetted to bacterial
PT nucleic acid or proteins, also conjugates of these oligo:nucleotide(s)
PT with antibiotics.
XX
PS Claim 49; Page 87; 163pp; English.
XX
CC This antisense oligonucleotide is nuclease resistant and can be used in
CC the treatment of animals, including humans, having a bacterial infection.
CC The treatment comprises administration of such nuclease resistant
CC oligonucleotides, targeted to a nucleic acid or protein of the bacterium,
CC and formulated with a carrier. A compound comprising this nuclease
CC resistant oligonucleotide can be covalently linked to an antibiotic. The
CC method is used to treat infections by a wide variety of Gram-positive and
CC Gram-negative, or acid-fast, bacteria, in human and veterinary medicine.
CC The methods are particularly used in immuno-compromised individuals (e.g.
CC patients with acquired immunodeficiency syndrome or those receiving
CC chemotherapy or radiation therapy), optionally in combination with, or
CC fused to, antiviral or other antimicrobial oligonucleotides. Apart from
CC therapeutic use, the oligonucleotides can be used to control bacteria in
CC laboratory cultures, foods, beverages and industrial processes. The
CC oligonucleotides are specific for bacteria, without affecting metabolism
CC in mammalian cells. They may also activate RNase H and have a general,
CC non-specific immune-stimulating effect. The oligonucleotides can be
CC administered orally, intranasally, rectally, topically or by injection,
CC optionally coupled to an agent (e.g. carbohydrate or polyamine) that
CC enhances cellular uptake

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

  TITLE     Direct Submission
  JOURNAL   Submitted (05-JUL-2002) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On Jul 5, 2002 this sequence version replaced gi:21426305.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html
            -------------- Genome Center
                Center: Whitehead Institute/ MIT Center for Genome Research
                Center code: WIBR
                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L27358
                Center clone name: 601_O_21
            --------------.
            * NOTE: This record contains 82 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *        1      708: contig of 708 bp in length
            *      709      808: gap of 100 bp
            *      809     1545: contig of 737 bp in length
            *     1546     1645: gap of 100 bp
            *     1646     2370: contig of 725 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (18-SEP-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Sep 19, 2001 this sequence version replaced gi:14586033.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 10, constructed by the Sanger Centre Chromosome 10
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr10
            RP11-34D15 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-34D15 It may be shorter because we sequence overlapping
            sections only once, except for a short overlap.
            The true right end of clone RP11-34D15 is at 115278 in this
            sequence. The true left end of clone RP11-285F16 is at 56886 in
            this sequence. The true right end of clone RP11-316M21 is at 2000
            in this sequence.

PT New antisense oligonucleotides targeted to nucleic acids encoding human
PT stearoyl-CoA desaturase, useful for treating diseases associated with the
PT desaturase, e.g. atherosclerosis, and in diagnostic and research
PT applications.
XX
PS Claim 3; Page 94; 117pp; English.
XX
CC The present invention describes a compound (I) that is 8-50 nucleobases
CC in length targeted to a nucleic acid molecule encoding human stearoyl-CoA
CC desaturase, and which specifically hybridises with and inhibits the
CC expression of human stearoyl-CoA desaturase, or which specifically
CC hybridises with at least an 8-nucleobase portion of an active site on a
CC nucleic acid molecule encoding human stearoyl-CoA desaturase. Human
CC stearoyl-CoA desaturase is mapped to chromosome 10. (I) has antilipaemic,
CC cardiovascular, antiarteriosclerotic, cytostatic and antiinflammatory
CC activities, and can be used in antisense therapy. The antisense compounds
CC (I) can be used for modulating the expression of human stearoyl-CoA
CC desaturase and for treating diseases or conditions associated with
CC expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC antisense compounds (I) can also be used for diagnostics, therapeutics
CC and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC tumour formation, as research reagents and kits, and in distinguishing
CC between functions of various members of a biological pathway. The present
CC sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC phosphorothioate antisense oligonucleotide, which is given in an example
CC from the present invention

XX
PT New nucleic acid that is a 5' expressed sequence tag (5' EST) for
PT obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
PT diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX
PS Claim 1; SEQ ID NO 734; 71pp + Sequence Listing; English.
XX
CC The present sequence is one of a large number of 5' ESTs derived from
CC mRNAs encoding secreted proteins. An ORF has been identified within the
CC sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs
CC derived from 30 different tissues. EST sequences usually correspond
CC mainly to the 3' untranslated region (UTR) of the mRNA because they are
CC often obtained from oligo-dT primed cDNA libraries. Such ESTs are not
CC well suited for isolating cDNA sequences derived from the 5' ends of
CC mRNAs and even in those cases where longer cDNA sequences have been
CC obtained, the full 5' UTR is rarely included. 5' ESTs are derived from
CC mRNAs with intact 5' ends and can therefore be used to obtain full length
CC cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic,
CC gene therapy and chromosome mapping procedures. They are used to obtain
CC upstream regulatory sequences and to design expression and secretion
CC vectors

PT New colon cancer polypeptides and polynucleotides, useful as vaccines,
PT for diagnosing, preventing, and treating colon cancer, and as markers for
PT the progression of cancer.
XX
PS Claim 1; SEQ ID NO 1542; 147pp; English.
XX
CC The invention relates to polynucleotides encoding colon tumour proteins.
CC The polynucleotides and encoded polypeptides are useful in pharmaceutical
CC compositions, such as vaccines, for the diagnosis, prevention, and
CC treatment of colon cancer. Polynucleotide sequences may be used as

CC hybridisation probes or primers, and in the design and preparation of
CC ribozyme molecules for inhibiting expression of tumour polypeptides and
CC proteins in tumour cells. The compositions are useful for stimulating an
CC immune response against cancer, particularly for the immunotherapy of
CC colon cancer, and as markers for the progression of cancer. ABK44450-
CC ABK46237 represent coding sequences of human colon tumour proteins of the
CC invention. Note: With the exception of SEQ ID No 1 and 2, the sequence
CC data for this patent did not form part of the printed specification but
CC was supplied by the European Patent Office

PT New polynucleotide sequences obtained from various cDNA libraries, useful
PT as hybridization probes, as oligomers for PCR, for chromosome and gene
PT mapping, in the recombinant production of protein, or in generating
PT antisense DNA or RNA.
XX
PS Claim 1; SEQ ID NO 11367; 44pp; English.
XX
CC The invention relates to an isolated polynucleotide comprising any one of
CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC determined by the technique of SBH (sequencing by hybridisation). Also
CC included is a purified polypeptide comprising a sequence corresponding to
CC a reading frame of the novel polynucleotide. The nucleic acid sequences
CC are useful in diagnostics as expressed sequence tags (EST) for
CC identifying expressed genes or for physical mapping of the human genome,
CC in forensics, in assessing biodiversities, or in identifying mutations
CC responsible for genetic disorders and other traits. The nucleotide
CC sequences are also useful as hybridisation probes, as oligomers for PCR,
CC for chromosome and gene mapping, in the recombinant production of
CC protein, or in generating antisense DNA or RNA. The purified polypeptide
CC is useful for generating antibodies specific for it. The present sequence
CC is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030073623

PT   New polynucleotide sequences obtained from various cDNA libraries, useful
PT   as hybridization probes, as oligomers for PCR, for chromosome and gene
PT   mapping, in the recombinant production of protein, or in generating
PT   antisense DNA or RNA.
XX
PS   Claim 1; SEQ ID NO 2132; 44pp; English.
XX
CC   The invention relates to an isolated polynucleotide comprising any one of
CC   38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC   determined by the technique of SBH (sequencing by hybridisation). Also
CC   included is a purified polypeptide comprising a sequence corresponding to
CC   a reading frame of the novel polynucleotide. The nucleic acid sequences
CC   are useful in diagnostics as expressed sequence tags (EST) for
CC   identifying expressed genes or for physical mapping of the human genome,
CC   in forensics, in assessing biodiversities, or in identifying mutations
CC   responsible for genetic disorders and other traits. The nucleotide
CC   sequences are also useful as hybridisation probes, as oligomers for PCR,
CC   for chromosome and gene mapping, in the recombinant production of
CC   protein, or in generating antisense DNA or RNA. The purified polypeptide
CC   is useful for generating antibodies specific for it. The present sequence
CC   is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was

PT   New isolated polynucleotide and pancreatic tumor polypeptides, useful for
PT   diagnosing, preventing and/or treating cancer, particularly pancreatic
PT   cancer.
XX
PS   Claim 1; SEQ ID NO 124; 300pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated polynucleotide (I) comprising: (a)
CC   any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b)
CC   complements of (a); (c) sequences consisting of at least 20 contiguous
CC   residues of (a); (d) sequences that hybridize to (a), under moderately
CC   stringent conditions; (e) sequences having at least 75% or 90% identity
CC   to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-
CC   ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer
CC   in a patient and compositions comprising polypeptides, polynucleotides,
CC   antibodies, fusion proteins, T cell populations and antigen presenting
CC   cells expressing the polypeptide are useful in treating pancreatic cancer
CC   and stimulating an immune response. The polynucleotides can be used as
CC   probes or primers for nucleic acid hybridisation, in the design and
CC   preparation of ribozyme molecules for inhibiting expression of the tumour
CC   polypeptides and proteins in the tumour cells, in vaccines and for gene
CC   therapy. Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
CC   Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC   associated proteins represented in AAB58106 - AAB58548. Lung cancer
CC   associated proteins and polynucleotide sequences, their agonists, and
CC   antagonists may have neuroprotective; cytostatic; cardioactive;
CC   immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC   general; nephrotropic; antiinfective; gynecological; or antibacterial
CC   activity. The invention also includes antibodies specific for the protein
CC   or polynucleotide sequences. The lung cancer associated polynucleotide
CC   sequences may be used for detection of lung cancer, chromosome
CC   identification, as chromosome markers, and for numerous other diagnostic
CC   or research purposes. The proteins may be used to treat disorders such as
CC   neural, immune, muscular, reproductive, gastrointestinal, pulmonary,
CC   cardiovascular, renal, and proliferative disorders. The proteins may also
CC   be used in the treatment of wounds and infectious diseases.
CC   Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are
CC   used in the course of the invention for the identification and
CC   characterisation of the polynucleotide and protein sequences

PT   New combination comprising cDNAs that are differentially expressed in
PT   prostate cancer, useful for diagnosing, treating or monitoring the
PT   progression of treatment of prostate cancer.
XX
PS   Claim 1; SEQ ID NO 432; 42pp; English.
XX
CC   The invention relates to a combination comprising a number of cDNAs
CC   expressed in prostate cancer. The invention also relates to a method for
CC   detecting differential expression of one or more cDNAs in a sample
CC   containing nucleic acids by hybridising a substrate with the nucleic
CC   acids, thus forming one or more hybridisation complexes, detecting
CC   hybridisation complex formation and comparing the complexes formed with
CC   standard complexes, where differences between the standard and the sample
CC   complex formation indicate differential expression of cDNAs in the
CC   sample. The differential expression is diagnostic of prostate cancer. The
CC   invention also relates to proteins and antibodies related to the cDNAs.
CC   The combination is useful for diagnosing, treating or monitoring the
CC   progression of treatment of prostate cancer. The antibodies are useful
CC   for detecting prostate cancer. This sequence represents a human prostate
CC   cancer cDNA of the invention.

PT Breast cancer diagnosis or treatment by comparing the level of expression
PT of a marker in a patient sample with that in the control non-breast
PT cancer sample.
XX
PS Claim 1; SEQ ID NO 410; 128pp; English.
XX
CC The present invention describes a method for assessing whether a patient
CC is afflicted with breast cancer. The method comprises comparing the level
CC of expression of a marker (gene/polypeptide see ACC50076 to ACC50334 and
CC ABR47386 to ABR47632) in a patient sample and the normal level of
CC expression of the marker in a control non-breast cancer sample, where a
CC significant increase in the level of expression of the marker in the
CC patient sample and the normal level is an indication that the patient is
CC afflicted with breast cancer. The breast cancer associated sequences from
CC the present invention have cytostatic activities and can be used in gene
CC therapy. The method is useful for diagnosing and treating breast cancer.
CC N.B. The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO

XX
CC The present invention describes isolated human NOVX proteins, where X is
CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in
CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant,
CC hypotensive, dermatological, anorectic, immunosuppressive, cytostatic,
CC antidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV,
CC antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic,
CC antiparkinsonian and antilipaemic activities, and can be used in gene
CC therapy. NOVX proteins are useful for treating or preventing a pathology
CC associated with a NOVX protein in humans and for treating a syndrome
CC associated with the human disease. NOVX nucleic acids, proteins and
CC antibodies can be used in the treatment and diagnosis of cardiomyopathy,
CC atherosclerosis, hypertension, congenital heart defects, aortic stenosis,
CC valve disease, tuberous sclerosis, scleroderma, obesity, transplantation,
CC congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic
CC disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia,
CC hypercoagulation, idiopathic thrombocytopenic purpura, graft versus host
CC disease, AIDS, bronchial asthma, Crohn's disease, multiple sclerosis,
CC infectious disease, anorexia, cancer-associated cachexia, cancer,
CC Alzheimer's disease, Parkinson's disease, immune disorders,
CC haematopoietic disorders, dyslipidaemias, and metabolic syndrome X.
CC ACC62346 to ACC62465 represent PCR primers and probes for human NOVX
CC sequences, which are used in examples from the present invention.
CC ABR54277 represents a human trypsinogen protein given in comparison with
CC the human NOV35b protein in the exemplification of the present invention

double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT7T3 vector (Pharmacia). Library constructed by Bento Soares and M.Fatima Bonaldo. RNA from normal foreskin melanocytes (FS374) was kindly provided by Dr. Anthony P. Albino."

                     /note="Organ: Liver; Vector: pCNS-D2; Site_1: EcoRI;
                     Site_2: NotI; The poly (A)+ RNA was dephosphorylated with
                     bacterial alkaline phosphatase (BAP) and then decapped
                     with tabacco acid pyrophosphatase (TAP). The decapped
                     intact mRNA was ligated with DNA-RNA linker including
                     EcoRI site by treatment of T4 RNA ligase and the first
                     strand cDNA was synthesized from oligo dT-selected mRNA by
                     priming with dT-tailed vector. The dT-tailed vector was
                     adjusted to have about 60nt. The cDNA vector was
                     circularized with E. coli DNA ligase after digestion of
                     EcoRI which site is also included in vector. An RNA strand
                     converted to a DNA strand by Okayama-Berg method. The
                     obtained cDNA vectors were used for transformation of
                     competent cells E. coli Top10F' by electroporation method.
                     The cDNA libraries constructed by this method are
                     full-length enriched cDNA library."

SCORE OVER LENGTH SEARCHES

Attached is a score over length search. This search was developed to overcome limitations in most standard search systems which favor large sequences with high scoring, but lesser overall identity over smaller sequences with higher overall identity. This search is especially useful for relatively small nucleic acid or polypeptide target sequences (antisense, fragments, probes, primers, RNAi, epitopes, haptens, etc.) claimed functionally via a form of hybridization and/or identity language and having defined upper and lower polynucleotide and or polypeptide length limits.

The score over length search is performed by first running the query sequence using examiner-specified identity and polynucleotide or protein length limit parameters, and saving 65,000 hits and 0 alignments from each desired database. The resulting output is reformatted using a Microsoft Word macro and is imported into Excel. The summary table data are then sorted by the ratio of score of each hit sequence divided by its length and the accession numbers for all hits below the examiner's desired score over length parameters are deleted. The remaining accession numbers are used to pull the corresponding sequences from the databases into subdatabases enriched for good hits and the query sequence is re-run against these subdatabases to yield the final results.

The score over length cutoff for this search is 80%

Examiner Please Note: This cover sheet should be included when submitting results to be scanned.

US-08-332-420-62
; Sequence 62, Application US/08332420
; Patent No. 5744300
;  GENERAL INFORMATION:
;    APPLICANT:  Maarten H.K. Linskens, et al.
;    TITLE OF INVENTION:  METHODS AND REAGENTS FOR THE
;    TITLE OF INVENTION:  IDENTIFICATION AND REGULATION
;    TITLE OF INVENTION:  OF SENESCENCE-RELATED GENES
;    NUMBER OF SEQUENCES:  70
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  Lyon & Lyon
;      STREET:  633 West Fifth Street
;      CITY:  Los Angeles
;      STATE:  California
;      COUNTRY:  USA
;      ZIP:  90017
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  3.5" Diskette, 1.44 Mb storage
;      COMPUTER:  IBM Compatible
;      OPERATING SYSTEM:  IBM P.C. DOS (Version 5.0)
;      SOFTWARE:  WordPerfect (Version 5.1)
;    CURRENT APPLICATION DATA:
;      APPLICATION NUMBER:  US/08/332,420
;      FILING DATE:  October 31, 1994
;      CLASSIFICATION:  435
;    PRIOR APPLICATION DATA:
;      APPLICATION NUMBER:  08/235,180
;      FILING DATE:  April 29, 1994
;    ATTORNEY/AGENT INFORMATION:
;      NAME:  Warburg, Richard J.
;      REGISTRATION NUMBER:  32,327
;      REFERENCE/DOCKET NUMBER:  210/041
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  (213) 489-1600

RESULT 2
US-09-380-262B-2/c
; Sequence 2, Application US/09380262B
; Patent No. 6448055
; GENERAL INFORMATION:
;  APPLICANT: SHIMIZU, Sakayu
;  APPLICANT:  KOBAYASHI, Michihiko
;  TITLE OF INVENTION: (9-DESATURASE GENE
;  FILE REFERENCE: 9437/259314
;  CURRENT APPLICATION NUMBER: US/09/380,262B
;  CURRENT FILING DATE:  1999-08-27
;  PRIOR APPLICATION NUMBER: JP 44303/1997
;  PRIOR FILING DATE: 1997-02-27
;  PRIOR APPLICATION NUMBER: PCT/JP98/00819
;  PRIOR FILING DATE: 1998-02-27
;  NUMBER OF SEQ ID NOS: 9
;  SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 2
;   LENGTH: 26
;   TYPE: DNA
;   ORGANISM: Mortierella alpina
;   FEATURE:
;   NAME/KEY: primer_bind
;   LOCATION: n is located at positions (18) and (24)
;   OTHER INFORMATION: primer DNA for PCR; y is c or t; n is a or g or c or t;
;   OTHER INFORMATION: r is a or g; w is a or t
